Do what ???

The elements for the MT500 aren't actually on 150 Mhz....they are on
a fundamental frequency (I would have to look it up but probably 12Mhz.
for the TX and 15-17 Mhz. for the RX) that is multiplied up in the
radio to achieve the desired transmit and receive frequencies.....

> 73,
> David, N8DO

I don't see why all radios would have to switch at the same time. Many places you need to talk with (approach/tower/ground/etc) already have multiple freqs. All I need to hear is the particular person I need to talk with, not everyone else in the sky, with the exception of non-towered fields. If 'we' decided to phase it in, designated towers could initially have both (installed at various towers over some time period) and you could call on either. As/if FM became more popular, the switch could eventually become mandatory in 5-10-15 years. Places where you do need to hear other traffic could use repeaters between AM/FM and eventually retire the AM side. But it still comes down to-Why fix something that ain't broken...AM's fine for aircraft.

My Extra Class code test was Q&A at the Seattle office in 1981. I felt
I was prepared for the old way, so I guess I was more than ready for the
q&a. And yes, I still work cw.

I don't have any QSL cards, I am planning to homebrew something. A few years ago a CDROM publisher was working on kitchen cooking recipes. They used track-feed stiff paper. They gave me about a mile of the stuff in a big box. You might want to try this stuff if you can find it. About 3x5 inches? I haven't measured.

Message-ID: <19970401001700.TAA09664@ladder01.news.aol.com>
Source record: 201306

I have been active, VERY CLEANLY and LEGALLY, on CB/SSB/11m. for about
2 years now. It has made me very interested in acquiring a Ham license,
and I
have been studying for Novice for a few weeks.
But right as my interest in the hobby/service of radio grows, my
disgust and
distress at the state of Ham mentality grows as well. I don't mean the
majority of
operators; I'm referring to the back-biting and discontent being thrown
about by the
journalists, reporters, columnists, and the like, from the Radio Magazine
and Newspaper realm, who discuss, very childishly at times, the "state of
amateur
radio/the future of our hobby", etc.
If you want to kill a service, this kind of snitting over CW/no CW
is self-defeating, and why should young people want to be involved with
that?
A smart, ambitious kid gets a copy of QST, or 73, or Popp. Comm....
He/she sees the debates of late, sees behaviour that he is used to in the
SCHOOLYARD, and walks away clean. Why put up with the babies on the air
when he can get it on the Net, and be able to ignore the people he doesnt
like? Theses periodicals do NOT realize how many "babies" they are
tossing out
with the CW bathwater.
Whether Code is retained or not, hardly matters, when the ARRL, FCC,
CQ, QST and others are (intentionally or not) turning off the future...
Our kids...
To the Radio Communications industry: GROW UP, AND ACT LIKE ADULTS.
Or don't expect an amateur radio hobby when YOUR kids are your age!

It is the hetrodyne tone caused by the two AM transmitters being slightly
different in frequency that alerts the controller that there is another
aircraft on frequency. You don't get this with SSB. A strong SSB station
could easily cover up another one.

>congestion, since it is a mastery which many folks will not care to

Nonsense. Better to just arbitrarily flunk half the new test takers,
as I suggested earlier. Much faster, cheaper, and more efficient than
weeding out folks who can't or won't learn code. Besides, what's so
desirable about "controlling HF congestion," which is mostly a myth
anyway? The more congestion, the more folks will have to use CW,
which IS the most efficient means of communication in busy bands,
right? A pretty good chunk of the HF bands are limited to CW only, so
the old-timers should have plenty of area to communicate, since new
users wouldn't even know how to copy CW.

>develop. In other words, those who have a passion for operating HF will
>develop the necessary skills of code, and those who don't have that
>passion won't! Those folks who don't desire to master the code can
>continue to use the VHF/UHF region.

Sounds kinda selfish to me. You do remember what happened to that gal
who said "Let 'em eat cake!" don't you?

>will limit the folks from all "walks of life." Like I said before, I
>believe most people can master the code. It doesn't require above
>average intelligence.

That should be obvious, but it's hardly an effective argument one way
or the other.

>Well, no, the above section alone is "no way a reason to have morse
>testing." That, simply, is my thought about learning the code. I believe
>most folks can master it.

Most folks can master how to program a VCR, too, but that's no reason
to require it on a ham test.

Interestingly the professional societies do change the language
requirement from time to time because of changing relevence.
You don't have to learn French any more for a science degree. German
was in vogue when I was in school now the switch is to Russian with
some schools opting for computer fleuency. Changing with the times,
seems the amateur establishment could benifit by going back to school.

Jeff,

As a high time pilot let me share with you. When the weather is down to minimums, the ILS is flakey, your GPS has lost lock and you are building ice rapidly you really loose interest in tuning a bfo. Those of us who ham and fly may be hams on the ground and in good conditions aloft but when it gets tough you become 110% pilot or 100% dead. We don't need SSB AM is just fine thank you.

Jerry

Great DX Conditions
or
"don't look now but you S-units are showing"

Did anyone else catch the fantastic band opening last night? I could not sleep so I was up late and was tuning around 20 meters when I heard the clock strike midnight. Suddenly the band really came to life with some great DX stuff. First I heard Romeo Germany 8 Uniform really banging in from somewhere in the south Atlantic with a big pile-up on the frequency. I picked a spot and dropped in my call. "Mike India Lima go ahead". "Germany 8 Uniform, you are 70 over 9, QSL info please." "Not to worry India Lima, my card 63% to you via burro." "Aw-Right, got him!" Then Charlie 0 Dog Echo gave me a call on CW running a modified HW-8 at a KW output with a re-worked cash register as a keyboard keyer. Maybe try a little more CW action. Called CQ on CW and answered by BIG CARRIER, weak audio from Victor 0 India Charlie Echo. "Your audio is weak, OM, try turning up the gain." Found out the audio section of his transmitter was not working and he was modulating by screaming at the final tubes.
Swung the beam further south and there was Charlie 0 Alpha X-ray in the Feedline Islands. Gave him a call. "Kilo 5 Mike India Lima you broke my S meter, do not transmit again I am afraid you may blow my rig." "Roger roger Alpha X-Ray, what is QSL info please?" He didn't reply. OK, lets see what's going on in the Pacific. Swing the beam on around. Wow! there is Fox Ocean 0 Lima running 80 over 9! "Fox Ocean 0 Lima this is Kilo 5 Mike India Lima you are 80 over 9, what are you running?" "Ok Mike India Lima, rig here is a converted cordless phone running 1.63 watts using lamp cord feedline to a chicken wire fence." Now this is great! Lets see what is going down on the European front. Swing the ole beam on around past north. Man listen to those signals! Better catch this one. Dropped in my call. "Mike India Lima go ahead." "Roger roger, Germany 0 Tango Charlie Hotel Alpha, you are 62.3 db over S9, Q5 copy. What is my report?" "Mike India Lima, you are minus S8, can only copy on negative voice peaks, try again." "MINUS S8!!, WHADDYAMEAN MINUSE S8? Im running 14 bazillion watts to a 42 1/2

element Thunder Stick at 163.42 feet!! Minus S8 my Aunt Fanny!" Wait a minute, what's that call again? G0TCHA? What's today? Let's see that calendar. Aw rats!

Well, I grew up believing that SOS stands for "Save Our Souls." The point being that when you send an SOS, or MAYDAY, you mean that "Both your vessel and your crew are in an immediate danger" and as such you accept loosing your vessel and its cargo for the sake of saving human life.
I don't know much about radio history but beside ham, I also have maritime hf license. Note that man-overboard doesn't qualify for SOS or MAYDAY but is a PAN-PAN procedure.
Hope this can help.

I've seen a couple mentions here recently of a "for profit" BA list.

Apparently, there's a few people with either a mistaken understanding of, or a mistaken assumption about, the BA list.

I don't even own a BA radio, but I like old test equipment, so I subscribed. I'm on several professional mail-reflectors, for cad/cam software, cnc machine tools etc., and I have to say that the BA list is the smoothest running mail reflector I've ever seen. And I love the strong moderation. That's the best part. It's always peaceful and courteous and productive on BA. Any baloney gets squelched fast.

I've done some research into website setup for work, so I know what telcom costs are like. I've also paid attention to the development of BA. The listowners there have lost over $10,000 in the past few years. That is to say, they dug into their own pockets to keep it going and going well. This is a fact.

The subscription fee, a whopping $1.50/month, isn't nearly enough to cover the costs of running an active mail-reflector with close to 1,000 serious members. Think "T1 line costs", think "$1,000+ software packages and updates", think "Unix servers" etc., etc.. It costs real money to process 50,000 mail transactions a month -smoothly and without errors-.

And those who've never managed a busy mail-reflector can't even imagine the hours of admin work involved, not to mention the incredible abuse that rude people pile upon you. It is truly shocking how childishly grown men can act. Of course, anybody who reads rec.radio.swamp experiences this on a daily basis. Remember, the BA listowners aren't getting paid dime one. They do it because they truly love BA's.

Anyway, a discussion of cost vs. no-cost might make some sense, but let's drop the 'for-profit' terminology regarding the BA list, 'cause that just doesn't make any sense at all.

>
>K5MIL
>

Not to mention that you would constantly have to fiddle with the clarifier control (if no pilot tone system is employed). While SSB is usable at MF and HF, the problems with frequency stability is of great concern at higher frequencies. Even if you could keep the frequency within +/-1 ppm (+/-120 Hz at 120 MHz) in an environment of vibration, temperature and pressure variations, the Doppler frequency variation for subsonic speeds (below 300 m/s) can be up to +/- 1 ppm, i.e. a plane approaching would be at +120 Hz and after flying over it would be at -120 Hz.

To get the feeling of what it is like, try to have an SSB QSO from a moving car at 1.3 GHz. The Doppler variation is similar as for a subsonic plane at 120 MHz.

Try slamming your throat against the steering wheel of your 56 Ford
Pickup - suddenly finding you cannot SPEAK - and that $450.00 Kenwood
Whiz-Bang Model 38645363-A does you no good. BUT ALAS....because some
"old croak" at ARRL HQ and another equally as croaky gent in the Office
```

of Official Rules and Regulation Makers decided that the "outdated CW" WAS NECESSARY......thus you learned it in spite of yourself.....and were therefore able to diddy-dotty a "HELP I AM ALL MESSED UP" cry for help - VIA THAT NASTY OLD "CW".....then come back and proceed to tell us all how and why "CW" should be eliminated!

IF by chance you can see the LOGIC in the semi-humorous "story" above = then you will see why CW IS STILL WORTH THE EFFORT. IF on the other hand you cannot see the logic - or so stubborn you will not admit it exists - then grab that CB MOMMA COFFE CUP.....put on the LEVI VEST.....slide into your STEEL-TOE SHOES....grab the latest edition of 4-Wheelers and Beer and head out for a weekend of fun and good times - WITHOUT the NEED and/or WORRY of ever learinging or UNDERSTANDING the PURPOSE behind that goddamned REQUIRED CW - "Giveaway Licenses Excluded" of course.

73.............NOT 73's..........there is NO "s" as you know,

JOHN - N6GNQ
Advanced - by some standards - not so by others
STILL believes in CW for ALL hams - ALL - NOT
SOME - BUT ALL!

Now stepping off of soap box and into "can" to take a piss.

Thank you, Richard! It's really tragic that some have not looked
into how well the ORIGINAL BA List works. It's free to all comers
for a mimimum of 4-weeks inspection.

What's more tragic is that the list owner at tempe.gov chose to
plagerize the name of BoatAnchors thereby impugning the BA Newsgroup as
well. We know this latter was a much careful and laborious construct
to offer a free avenue for those who preferred not to pay a trivial
membership fee.

No one even in the commercial would attempt such a back-stabbing
maneuver. Ethics are important to MOST folks.

I subscribed to 73 magazine for years (along with CQ and QST). Sadly,
I dropped 73. One of the reasons was the bizarre editorials Wayne
published. One of the few articles I liked was the "Ask Kaboom"
series. Just think how much thinner an already skinny publication that
73 is would be if Wayne dropped his diatribe.

What's even sadder than the name rip-off is that the server is run by public funds!

I subscribed to see what was going on and so far have read nothing different than much of the stuff on rec.radio.amateur.boatanchors. There is a similar list called otrig-l that is free for anyone to use. I fail to understand any logical reason to set up another list. The digests are freely available to anyone who knows how to get them so you don't have to miss any of the action on the real list. That wisdom and information costs you zip! However if you wish to participate you gotta join the club!

Those whining about the annual fee which is now $20.00 (but some of us paid early and saved $8.00) should consider themselves fortunate to have access to the digests which, somewhat like a repeater, is NOT a God-given right.

I guess there will always be whiners and complainers so maybe it might be a good thing to have a freebie list just for them. They can play around in the sandbox kindergarten level while the rest of us attend Real Radio University.

Interesting to note: There has not been a WORD of this on The List!

I didnt know there was one? I cut the green "Please cut me" wire for
the mars cap mod. I'd like to be able to take the things receiver up
above 450 Mhz. I dont need TX up in that region. But RX would be
nice....

I have never worked an AMSAT satellite because the gear required costs
too much. I work only RS-10, RS-12, and RS-15. When AMSAT puts up
a bird I can use, I won't be cheap.

Do you have any idea how I can contribute to the Russian Amateur
Satellite Program?

Michael-

The elitism espoused, justified by the technical competency found on the list and condemned by ad-nauseum discussions of 'radio wax' and 'enviro-political testimonials', can only server to intimidate potential participants of the one-true-list without whom there would be no list.

The implied threat, "no god given right...." (to the digests) fosters no good feelings toward contributing, on my part, and can only serve as additional discouragement to potential participants.

Analysis of your post and consideration of the above leads me to only one conclusion. You must be one of the renegades. This disinformative diatribe has to be a well disguised from me, perhaps clear to my intellectual superiors, attempt to sabotage the one-true-list.

Thermionics forever!

Not only that, but SSB has no constant carrier for RDF purposes. And
that can be pretty important when the on-board nav gear has gone
sour. ATC can stomp the pedal and have a fix on you in less than
three seconds (assuming *their* equipment is working). Otherwise
you start flying triangles and wait for an escort to come up and
lead you in.

Ground based observing equipment during the moon landing era couldn't resolve anything smaller than about half a kilometer in diameter at the lunar surface. This has more to do with the distortion caused by our atmosphere than the resolving power of telescopes. The newer adaptive optics systems might be able to image a lander, and Hubble could if it has adequate filtering to tolerate the bright moon light (I don't believe it does, however, it is optimized for deep space objects). And Hubble wasn't around during the moon landing era, and is suspect because it is controlled by the government.

There were reports of observers spotting the dust plume from lunar landings (the rocket exhaust itself is pracically invisible in vacuum), but that's rather unconvincing. Observers have reported observing transient phenomena on the lunar surface for nearly 100 years. No one has managed to take a photograph of these events, however.

And a small number of folks outside government received radio transmissions direct from the lunar surface. (Receiving equipment wasn't as good back then, and required much larger antennas than what would be required today to get a copyable signal, so few outside of government had the capability.) That's pretty convincing evidence, though the equipment on the moon could have been an unmanned relay.

The relayed TV pictures were the most convincing thing that most people had to go on. The difference in gravity was quite obvious, and would have been very difficult to fake given the level of special effects technology available during the moon landing era (it'd be a snap to fake today, of course, using the tricks developed by Industrial Light & Magic).

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00 Shipping extra. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282
Fax 610-588-0253 Or email n2gkw@epix.net

54. Save me from NOISE!

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-01 00:00:00 UTC
From: bv3fg@alumni.nctu.edu.tw
Message-ID: <5hra17$k2k@netnews.nctu.edu.tw>
Source record: 201346

I have been suffering from heavy local QRM for 2 years.
The noise sounds like sparking 60 time per minute when freq. is above
5 MHz. On 14 MHz, the strength of the moise is listed below:

PreAmp ON / NB OFF : 9 S-unit
PreAmp ON / NB ON : 6 S-unit
PreAmp OFF / NB OFF : 6 S-unit
PreAmp OFF / NB ON : 3 S-unit

The noise is still very strong (about 4 S-unit) on 50 MHz with
PreAmp ON and NB OFF. So I cannot pick up any weak signal and I must
struggle against the noise for copying the signal so-called 55.

I have made sure that:
1.The noise is ont caused from any equipment in my house and
neighborhood.
2.Ground system (both DC and RF) work well.
3.The so-called low noise receiving antennas don't eliminate the noise
in my situation. They reduce signal and noise at the same time, but
the S/N is still poor.
4.The noise disappears when the whole city loses electricity power.

Because I live very near (about 400m) a large electricity power
transfer station which transfers electricity from about 300KV to lower
voltage, I guess that the noise is generated from this station.

My questions are:
1.Is waht I guess correct?
2.Is AF DSP able to eliminate this kind of noise?
3.Is it possible to kick the noise away before the noise gets into my
receiver?

Please save me from noise!!!

Personally, I can't financially support ANY organization that insists
on using inferior product. I am speaking about the Ariane 5 launch
vehicle. The first one blew up, and the others that had space on
the second launch pulled-out. One would think that Amsat would have
learned over the years that the ESA does not have the world's best
reliability for launch vehicles (anybody remember the early Oscars?
The ones that were lost because the launch vehicle - Ariane - went
into submarine mode?). I know where of I speak, having worked in
the satellite business (RCA and it's successors) for the last 13+
years. When they see the light and use another launch vehicle, THEN
I'll support them (Amsat).

Bzzzzzt! Bad answer.

There are no segments of the HF bands which are limited to "CW only".

Why go to school for 23 years to be a brain specialist?.
You just want a license.
Why learn CW? You just want a license?
You can cause some interesting things to happen when you don't know
what you are doing.

As a rule of thumb, 2m communications is considered "line of sight".

In other words, the two antennas should not be "over the horizon"
from each other or have large intervening obstructions.

If both stations are on mountain tops and have reasonable antennas,
the distance could be several hundred miles.

If both stations are in a city at ground elevation with many buildings
and similar obstructions, the distance might be only a few kilometers.

I'm looking for a Morse Code Trainer for the Apple Newton. I have searched the FAQs, looked through as many web/ftp sites as I could find, but didn't find anything for the Newton.

I'm considering writing one if there isn't one. Any interest? Any features that are must haves?

My principle reason would be to support Boy Scout merit badge requirements, but if I get started on one, I see no reason not to make it more useful.

Thanks,

-Tim

Exactly the issue. Why is ONLY morse code testing made the exclusive
test element it is? That's the issue. Keep code as part of the
overall test scoring, but it sure doesn't deserve to be the
exclusive test element it now is. Have 5 questions relating
to copying code on the written test (that's more than any one other
mode has) and then maybe the test will at least be on a par with it's
contemporary role and relationship to reality in modern
communications.

Am I missing something, or what? I always assumed that the reason
aircraft use AM is far more simple than all of you folks seem to be making
it. Didn't the VHF aircraft band come into use before FM was very common?
Once it was established as AM, hasn't commonality with existing equipment
been what's kept it that way all this time? If a switch were made to FM,
all existing equipment would have to be replaced with FM, all at the same
time.

>I like the idea of mode-based testing. You want CW, take a CW test.
>You want SSB, take a SSB test. And so on. Unfortunately the no-code
>contingent consistantly calls this "too complicated". Their ultimate
>goal is no-code, no-theory. The ultimate in uncomplicated licensing.

sigh I wish I knew why people believed this. I have yet to read
or hear a single argument which suggests a theory exam is not needed
for radio amateurs. Nobody believes that.

There is a very simple reason for eliminating the code requirement:

Testing is not required for any other operational mode.

Hams seem to fear that everyone in the universe will want to join their
ranks unless they introduce large barriers to entry into the hobby. Catch a
clue people, there are already no-license hi-tech digital hand-held radios,
they are called cell phones. They are convenient, available, and relatively
cheap for large numbers of people. There is already no-license hi-tech
packet at data rates substantially higher than the vast majority of packet
radio, its called "the Internet".

One can get side tracked into all the issues of why CW is a good mode:

1) equipment is relatively cheap and simple to design and build
2) there is a long standing tradition of CW
3) it gets through where SSB and AM can't.
4) it is fun!

which are certainly all true, but none of which are particularly compelling
to require MANDATORY operational testing. If I choose not to use Morse,
then so be it. I should not be forced to demonstrate a skill which I have
no interest in developing.

The Dayton Amateur Radio Association announces its 1997 award winners and ham radio saves a life in the Golden State. These stories and more on Newsline report number 1024 coming your way right now!

(*****

HAMVENTION ANNOUNCES AWARD WINNERS

March 23rd was a good day for awards. Not only did the nation learn that the film The English Patient had been named Best Picture of the Year, but three lucky hams found out that they have been selected to receive this years coveted Dayton Amateur Radio Association Awards. And for the three its like winning an Oscar.

You know the saying, You know it's spring when the Dayton Hamvention Award winners are announced. So it must be spring. The envelopes please.

The 1997 Dayton Hamvention Amateur of the Year is Leo I. Meyerson, W0GFQ of Omaha, NE. An amateur of 69 years, W0GFQ founded World Radio Labs. Was a manufacturer of countless transmitters and receivers including the Globe Scout and the Globe King.

"When I got started in the radio business, it was 1935. I catered especially to the radio amateurs. We had what we called a WRL-70 which was our first transmitter put out in 1937. And then we were working on a 150 watt rig when the war started.

When the war was over, I went back to building transmitters and getting into the amateur business again. And I realized that there would be a pent-up demand for equipment of all sorts. We designed the Globe King and all the rest of those items which sold very well." W0GFQ

Mr. Meyerson became a member of the QCWA in 1968. And was the first chairman of the QCWA Scholarship Program.

"They put me in charge of the scholarship program, which is my baby. Something near and dear to me." W0GFQ

At 86 years young, W0GFQ, who still plays tennis, plans on being at the Hamvention Banquet to accept his award.

The 1997 Technical Excellence Award goes to Albert J. Ward, WB5LUA of Allen, Texas. WB5LUA garnered his award for his accomplishments in amateur VHF, UHF and microwave technologies. Mr. Ward has designed numerous circuits used in these areas.

"I guess, you know I have been on VHF ever since I got my ham ticket back in '65. Back in the days of 2 meter AM. Ever since then I think that has been my major interest.

As you go up higher in frequency, signals get weaker. So you find you have to build bigger antennas and lower noise receivers and higher power amplifiers." WB5LUA

WB5LUA holds Worked All States Awards for 6, 2, 220, 432, and is currently working on his WAS for 1232 MHz. Mr. Ward, an Electrical Engineer at Hewlett Packard has had the privilege to be able to share the same technology with his work and hobby.

And the 1997 Special Achievement Award goes to Joseph J. Fairclough, WB2JKJ of Sea Cliff, NY. Mr. Fairclough is being honored for his work in bringing amateur radio into the public school system.

"One thing about ham radio, its always exciting, its always interesting, it's never dull. If you are a school teacher, the last thing you ever want to hear in a classroom is the word dull and boring.

So I figured there had to be someway to integrate amateur radio into the language arts curriculum. Came up with the name Educomm - Education

through communications.

Back then, we were on the lower east side of Manhattan in Junior High School 22. And the principal thought, this is a great idea. We started off with 30 young people. The seventh and eighth grade in those years, a combination class. They gave us a room and that is about all, if fact that was all they gave us was the room. The rest we were on our own for.

We worked together with those kids and it was beyond successful. We found a way to take the kids out of the classroom, around the world through the magic of amateur radio. To experience life west of the Hudson, sometimes even east of the Hudson. That there was a whole big world out there was available to them right from the classroom." WB2JKJ

That first class had 30 students. And today he has over 500 students enrolled in Educomm. Not to mention the other school systems throughout the country using the Educomm Amateur Radio System.

Newsline congratulates all three winners of this years Dayton Awards.

The three winners will be the special guests at an awards banquet in their honor the evening of May 17th in Dayton. Newsline will have a crew there to bring you this and all the action of Hamvention '97.

QCWA MEMBERSHIP DECLINING

Licensing figures may say that Amateur Radio is growing, but membership in the Quarter Century wireless Association is on the decline. So says QCWA President John Kelleher, W4ZC.

Writing in the Spring issue of the QCWA Journal, Kelleher says that a cursory survey of membership has revealed that from 1991 to 1995 some 4,000 hams elected to join the organization. During the same time frame, about 2200 members became Silent Keys. This should have given QCWA a net gain of about 1800 members but it didn't work out that way. Instead there was a net loss and Kelleher says that the organization needs to find out why members are dropping out.

(Via QCWA Journal)

P3D DELAYED UNTIL SEPTEMBER

The launch of AMSAT's new Phase 3D ham satellite has again been delayed. This time until September.

This latest delay is the result of modifications to the booster rocket that will carry it into space. The launcher in question is the European Space Agencys' new Ariane 5. ESA officials say that they will use the time to modify the rocket's electrical systems and software. This, in response to recommendations of a board of inquiry that looked into the causes for the failure of the Ariane 501 launch last year.

The delay will be a costly one for ham radio. AMSAT-NA President Bill Tynan, W3XO, says that he believes the postponement will add at least 100,000 dollars to Phase 3D's final cost. Tynan says this does not include the estimated 200,000 dollars funding shortfall that AMSAT North America and AMSAT-DL Germany reported back in February.

So far, AMSAT-DL has invested nearly 2 million dollars and AMSAT North America another 1.4 million dollars to build and launch the Phase 3D bird.

2000' TOWER FALLS IN CENTRAL LOUISIANA

A 2000 foot high tower belonging to KNOE-TV in Monroe, Louisiana fell as workmen were installing replacement leg braces on it. One worker was killed and two others were injured in the collapse. At least two ham radio repeaters were silenced by the accident.

The accident happened March 20th, according to information form Tommy Gray of Graytech Communications. The entire 2000 of tower fell within 70 feet of the towers base.

The worker who died, was pinned under the rubble. A harrowing story for one survivor. He thrown from the tower, landing 200 feet away in an adjacent field. He was found dazed and walking around when help arrived. The second survivor hit the ground sustaining severe injuries. Both were rushed to a nearby hospital in critical condition.

Guy wires from the tower were strewed all over the field. One witness said the mess resembled a pile of spaghetti. Falling guy wires also hit the transmitter building, causing damage so heavy that structure looked as if a bomb went off.

Tommy Gray, was working at a nearby station when the tower fell. He says that the site appears to be a total loss.

The commercial TV station isn't the only casualty. The towers collapse also knocked an educational television station, a regional FM radio station and two amateur repeaters including a popular 6m system off the air.

The broadcasters are now back on the air using other sites. No word yet on what the hams plan to do to rebuild.

HENRY RADIO CLOSES RETAIL STORE

The "candy store" has shut its doors for the last time. Longtime ham radio retailer Henry Radio closed its famed West Los Angeles retail store on March 20th.

According to Ted Henry Jr, W6YEY, in a statement to the ARRL Letter, retail sales of ham radio gear has not been a profitable business for the company for the last several years.

Henry Radio will remain in business and will continue to manufacture and market its commercial equipment and lines which have been profitable. Only the storefront retail operation has gone away.

A landmark in the ham radio supply business for over seventy years, Henry Radio opened its first store in Butler, Missouri back in 1927. Its closing of its West Los Angeles location means that Henry Radio no longer has a retail store location for sales to the ham radio public. Its closing also does not bode well for the future of the ham radio equipment supply industry which openly admits that sales of big ticket items have been in a slump for the past few years.

RADIO AMATEUR CALLBOOK GOES CD-ROM ONLY

The Radio Amateur Callbook has abandoned paper publishing in favor of the more modern CD ROM. Callbook publisher Bob Hughes announced March 17 in a letter to Callbook distributors that the company is phasing out its telephone book size paper North American and international editions in favor of its CD ROM product.

The 75th edition 1997 Callbook will be the last hard copy version ever printed. Hughs cites "rising costs and increasing demand for electronic publishing as the reasons for the company's decision to concentrate on the CD ROM version, which includes worldwide listings.

(Via Press Release, ARRL)

EIMAC SELLS GLASS-TUBE DIVISION

Eimac is out of the glass tube business. Eimac itself has relocated to Palo Alto, California and continues to manufacture and rebuild ceramic external anode tubes.

The former Eimac glass tube manufacturing facility has been sold To Triton Manufacturing and as moved from Salt Lake City, Utah to Easton, Pennsylvania.

The good news is that Triton will sell small quantities of its tubes indirectly to radio amateurs. Hams interested in obtaining Triton tubes should contact the company's distributor, Richardson Electronics in Lafox, Illinois. Richardsons number is toll free at (800) 323-1770.

SUICIDE PREVENTION

When California radio amateur Dale Kobetich, KE6ZGR, decided to take a break from working at his home one weekend, he had no way of knowing that what would happen during the next few minutes would help save a stranger's life. Nor would he know that amateur radio would play a huge role.

On February 15th, Dale Kobetich, KE6ZGR goes for a short hike into hills above his Laguna Canyon home. While walking along a remote road, he spots a car parked near a water tank. Kobetich looks inside and finds a woman sitting alone, with the windows rolled up. A hose is connected from the tail pipe into the passenger compartment and the engine is running. Kobetich tries tapping on the windows to get the woman's attention, but she refuses to acknowledge him.

Kobetich says he doesn't always carry an amateur radio when he goes for walks. But this time, he did. He puts out an emergency call on the South Orange Amateur Radio Association's 2 meter repeater. Steve Kiver, KD6MHL, makes a 911 call for Dale to Laguna Beach police. Kiver relays information on the situation, including descriptions of the woman's car and license plate.

Knowing that she has been discovered, the woman rips the hose from the window and drives off before police can arrive. Dale relays information on the road and direction she's traveling.

At this point, Ray Hutchinson, KF6CNZ and his wife Debby, who are monitoring the situation, realize they might be able to help. Ray and Debby are mobile and are near an intersection the woman will be approaching shortly. They pull off to the side and wait.

The Hutchinsons watch as the woman passes by and gets on to Interstate 405. Ray reports this, even relaying to officers that the woman's vehicle

is just four cars ahead of police. The California Highway Patrol also becomes involved.

About a week later, Steve Kiver gets a phone call from the woman involved, relayed through Laguna Beach police. She's calling simply to say thanks to all the people involved for their efforts in preventing her attempted suicide.

It was quick thinking and a selfless sense of service to their community that made Dale, Steve and Ray decide to become involved. Their actions were made possible by amateur radio, the perfect tool which, on this day, helped save a life.

TEXAS SKYWARN

Texas amateur operators and others involved in Skywarn activities in the Lone Star State now have access to a new internet site. A site specifically designed to support the volunteer storm spotter program.

Jim Robinson, K5PNV, is the Webmaster for Skywarn Texas. He tells Newsline that The Skywarn Texas server was developed by the Madison County Amateur Radio Club in cooperation with the Houston-Galveston National Weather Service. It was originally intended for spotters in counties within the Houston County Warning Area, the entire database was reworked in January to provide a statewide focus.

The Skywarn Texas site has a very complex internet address. The easy way to find it is by using a search engine like Alta Vista or Yahoo. Also, in late January it was named a Starting Point "Hot Site" by the often accessed search engine at:

http://www.stpt.com

So you can try there as well.

(Via K5PNV)

ARISS SUPPORT GROWS

Nine ham radio organizations and societies have signed the Amateur Radio on the International Space Station memorandum of understanding. The signatories include the American Radio Relay League, AMSAT-North America, Radio Amateurs of Canada, AMSAT-Canada, Frances REF, AMSAT-France, AMSAT-Italia, and Russias' SRR. Japan AMSAT, the Radio Society of Great Britain, and the AMSAT-UK are expected to join as well.

INTERNATIONAL DX CONVENTION

And the 1997 International DX Convention has moved to Fresno, California from its longtime home in Visalia. Dates are next weekend, April 4th through the 6th at the Fresno Holiday Inn. A major program of events is planned.

(Via Press Release)

(*****

OPPOSITE SIDEBAND NIGHT

Don't forget that Tuesday, April 1 is the date for the seventeenth Jail Birds Amateur Radio Club Opposite Sideband Night contest. This is the yearly 10 meter operating event where stations East of the Mississippi River operate in the normal upper sideband mode while those to the West use lower sideband. The idea is for stations either side of the arbitrary boundary to work one another cross sideband. One point will be awarded for each successful contact and there are multipliers for cross mode, cross band and out of band contacts as well.

For more information or an official entry log, please contact a Jail Bird in your area.

WINDTRACKS '97

It's easy to know that spring has come to the midwest. That's because many amateurs are turning their eyes skyward to launch and track high altitude ham radio equipped balloons. One of the most popular ham radio ballooning experiments is Windtracks. It takes place in the Midwest.

The schedule for Windtracks balloon projects for 1997 has been released. And according to flight director Chuck Crist, WB9IHS at least four and possibly nine amateur radio balloon experiments will be launched this year.

Most of the space projects will include students from central Indiana schools. And as in the past, the students help launch and track high altitude balloons across the state using amateur radio technology.

Most of the balloons fly into sub orbit reaching 90,000 and 100,000 feet before bursting and then floating back to earth.

Many local hams get involved by providing communications equipment and the expertise to follow and recover the experimental packages.

Windtracks information can be found on the internet by typing:

http://www.windtracks.org

Newsline will keep you updated on Windtracks and other ham radio ballooning experiments.

Hey, how about if we all storm Icom with email to get these back into a
limited production. Oh, and as far as the Kenwood 7xx series, or for
that matter, any kenwood, they don't have a narrow front end and don't
hold up good in a repeater environment as a remote base (at least not as
good as the Icom band units!)

NEW TEMPORARY LICENSE CLASS PROPOSED
In an unprecedented event, on Tuesday this past week, all
amateur radio vendors, and many national electronic chain
outlets, in an effort to shore-up the sagging radio sales
picture, were given the authority to issue amateur radio
call signs to new radio purchasers.
The ruling from the FCC in docket APR-001 allows for the
callsign block of "WT" along with the district #, for all vendors
to issue. These "try before you study" licenses will be issued
for a thirty day on-air trial period at the general class level.
It works like this: a potential ham who doesn't know if the
hobby is worth the effort of all the study time, is authorized to
operate for a period of one month along with the purchase of a
radio. The new operator will be authorized at the General class
level with a "WT" callsign i.e. WT2XYZ.
At the end of the trial period, the new ham can enroll in a
class, or take their exam from a local VEC or from the vendor,
which is also now authorized to give radio exams. If the
operator decides the hobby isn't worth the aggravation they find
on the HF bands, he/she can return the radio for a full refund.

We have a WINNER in the Log-It v5.0 Logging Software Contest !
Its : Drayton - KF4AME from Miami, Fl. Why not enter your name
for the MAY giveaway !?

My website has a free download of Amateur logging
software - and alot of other computer related programs too ! The
database is in full color, has logging, QSL functions, access
QRZ! cd-rom, search DX prefixes, ten minute timer, colorful
world maps with call prefixes for reference, awards tracking,
screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

There is also a bulletin board for Amateur Radio related stuff.
You can use it for messsages, sell/trade/buy, computer problems,
track DX and all kinds of things !

The site has a chat service for maintaining contact when the bands are
down and other times too !

Take a look ! Thanks .... Jim

I'm running a contest that gives away free logging software !

We have a winner for APRIL in the Log-It v5.0 Logging Software
giveaway ...

It is : Drayton - KF4AME Miami, Fla.

You could be the May winner by submitting your name.

The website has lots of other neat stuff too ! Like links,
shareware downloads, etc.

Go to : http://www.esdi.com/log-it

There is also a bulletin board where you can post messages,
buy/sell/trade equipment, get help with your computer problems, locate
software/hardware, keep track of DX operations and post notices
regarding good DX on the air or just keep track of old friends.

Try the CHAT SHACK while you are there. Get some friends together
and keep in touch when the bands are down or anytime !

Take a look ! Thanks ... Jim

SB QST @ ARL $ARLB017
ARLB017 FCC issues changes in Amateur Radio rules (Part 2)

ZCZC AG17
QST de W1AW
ARRL Bulletin 17 ARLB017
From ARRL Headquarters
Newington CT April 2, 1997
To all radio amateurs

SB QST ARL ARLB017
ARLB017 FCC issues changes in Amateur Radio rules (Part 2)

Responding to a petition by the National Conference of
Volunteer-Examiner Coordinators (NCVEC), the FCC said VECs could
elect to designate a session manager if they wanted to, but they
would not be required to do so. The Commission's new rules
recognize the VE session manager function but emphasize that the
three Volunteer Examiners at a test session would still be held
''jointly and severally responsible for the proper conduct of each
examination administered.''

Another change will allow hams to include a self-assigned indicator
before, after or both before and after the assigned call sign when
identifying. Current rules only permit using such indicators after
the station's regular call sign. Self-assigned indicators include
those used to indicate location or type of operation, such as /KP2
when operating in the US Virgin Islands or /m when operating in a
vehicle. They also can denote participation in an unusual event or
other atypical station operation, according to the FCC.

Citing mostly negative comments, the FCC decided against allowing
exam credit for formerly held amateur operator licenses. The
Commission also said ''no' to the ARRL's suggestion that the operator
license be valid for the lifetime of the holder. The FCC said
operators would still have to renew their station licenses every ten
years and that it did not want to maintain a separate database to
keep track of station license expirations.

The FCC announced all of the rules changes in a Report and Order,
FCC 97-99, adopted March 20 and issued April 1. The amendments
become effective 30 days after the Report and Order is published in
The Federal Register.

(END OF PART 2)

>I think you are talking about ending cw in some form.

He and others like myself certainly are.

>I think that is a big mistake, because it narrows scope
>for the exsistance of ham radio.

How, we are not proposing that you or anyone
else should be forbidden to learn and use CW.
We are saying it is not needed anymore as an entry requirement
to an HF amateur license.

>CW is still used in marine radio as well as other services.

I suspect you are not up to speed on the current
requirements. The US Coast Guard abandoned all
use of morse code more than a year ago as has
the British Coast Guard and the French to folllow.

>You can't go to sea without a radioTELEGRAPH ticket.

I belive that is incorrect..or if still a requiremnt it
is ending soon.

>My extra class ticket meets the cw requirement for
>second radiotelegraph ticket,which is one reason to have
>ham radio.

Your logic in that statement totally eludes me.
What might your being a ham with an extra class
ticket have to do with radio telegraph ticket?

>hit the nail on the head.

If you are worried about the "technically unqualified", then test for
technical qualifications, not Morse Code.

: time.

There is no reason to consider a switch from AM. The S/N ratio of AM at
a particular power level is better than FM whenever the signal fails to
reach the threshold of FM. The complexity of SSB is quite unnecessary,
since the gain in S/N is fairly small, even if the frequency stability
problem could be solved.

Silly me, I though it was still used because of the doppler effect. On FM that would change the operational frequency. On AM it just sounds funny (we ain't talking Cessna 150's here).

Can you pick this up on your portable/pocket radio? If so, try driving around to see if it gets louder here or there. It could be a power/utility pole with a malfunctioning transformer or hardware. IF you think it may be, bump the pole with sledge hammer or your car and see if it stops. Call and complain to your power company over and over even if it turns out that it isn't their problem. They might fix it to shut you up! hi!

Good luck to you, I've been there....

Huh? You can work the microsats with a dualbander, even in some cases
a HT dualbander. If you don't have either of those, a $50 80 watt GE
Exec II or 110 watt Mastr II can make a dandy UHF uplink transmitter.
Use the temperature compensation input of the Icom for doppler tracking
and/or VXO. You've already got the 2m gear apparently if you're working
the mode A birds. Or you can certainly use one of the converter circuits
in the various Handbooks to translate receive down to the HF receiver
you've got to have to work mode A. Antennas are merely a matter of a
wooden 2x2 boom and some aluminum clothesline wire for elements.

If you can't get on the microsats or mode B birds for under $100, you
aren't trying.

Dear Members,

some time ago I found a German weather-radiosonde for air-borne (baloon) measurements, Type E076. I could reactivate it because of only minor damages.

Technical details I found out:

Weight: 0.450 Kp incl. styropur case, without batt.
Power supply: 12 Volt Batt., switched by a reed contact
Oscilator Freq.: 100.95 Mhz
Output: <0.25 Watt
Modulation: FM
Sensors: Air-pressure, -temp., -humidity
Data transmission: 3 variable NF tone frequency bands, one for each sensor

The equipment I use:
-Different short wave receivers
-Ham-Com Ver. 3.0 plus Ham-Com demodulator on RS 232
-JV-Fax Ver. 7.0
-PC Weatherfax prof.
-Packetmon. 3.1
-self-written or adapted programs in TURBO-Pascal Ver. 6 & up

My questions:
Who knows more about the details of receiving and decoding the transmitted data?
Does someone have TURBO-Pascal procedures (source code) for parallel analyzing multiple frequencies?
Can someone give me a hint or a link on this subject?

Thanks to you all in advance,

Dr. Bunk

We are looking for an RF engineer to help us start a micro-radio FM station in Seattle. The station will cover a range of things including news, music and spoken word. We have a motivated, energetic group of people. We have a fair amount of equipment. But we don't have a working transmitter, and that's where you come in.

So far we have two transmitters on hand. But neither one is putting out clean signals, so we're up against a wall. We need help from someone who knows RF design and troubleshooting. Current FM broadcasting technical practice is a big plus. If you have access to test equipment, that would help too. Our technical expertise is actually quite good and we've gotten pretty far ourselves -- now we just need your help to get us over the top.

If you think you can help, please contact cameron at 206-729-8409 or email slr@scn.org.

>It is the hetrodyne tone caused by the two AM transmitters being slightly
>different in frequency that alerts the controller that there is another
>aircraft on frequency. You don't get this with SSB. A strong SSB station
>could easily cover up another one.

As long as you're looking at "what ifs", consider this:
The hetrodyne note *only* will be produced if the two signals are not
on exactly the same freq'y; for example, a 500 Hz note means the two
signals are 500 Hz apart in freq'y. Hence, Two AM signals transmitting
at the same time on exactly the same freq'y will produce no tone at all.
In this situation SSB would be more beneficial.

I think you are talking about ending cw in some form.
I think that is a big mistake, because it narrows scope
for the exsistance of ham radio.
CW is still used in marine radio as well as other services.
You can't go to sea without a radioTELEGRAPH ticket.
My extra class ticket meets the cw requirement for
second radiotelegraph ticket,which is one reason to have
ham radio.

W7>The other reason that aircraft use AM is because the DF loops operate
W7>best with an AM carrier. Who in aviation has not practiced the DF
W7>steer?Pilot for 42 yrs

Having begun flying in 1962 and having been in aerospace working on civil avionics at that time, that's not a valid reason. The VHF civil airways band was organized in the early 1950s and the use of AM seemed to be the easiest to implement at the time. The DF steering was done at LF, MF, and low HF, a holdover from pre-WWII days. Most general aviation aircraft of today don't have any DF loop.

I've never "practiced a DF steer" other than doing once to show the instructor that I knew what it was and no instructions were needed. Flying in the Southern California area was then, is still done, on airways to VOR radials. A VOR left-right indicator is better than cranking a DF when there are a zillion other things to do in crowded airspace. :)

Many air carriers now have navigation computers slaved to VOR-DME to permit off-airways flying, a task that would be most difficult to do with the old LF-MF-Low-HF pre-WWII frequencies.

JH>SSB would serve that same purpose.

SSB is used on long airways out of range of VHF ground stations.
Today.

Pilots don't operate their radios like radio operators sitting at a
desk doing nothing but communicating. On the HF band, the frequency
stability of SSB avionics is sufficiently close to enable coherent
speech, but the same percentage tolerance at VHF would result in
great distortion without some pilot carrier lock-on. The
international civil airways bands of 108-137 MHz were established
over four decades ago and work very well indeed as they are.

JH>You edited out the point I was trying to make. Did you read Len Anderson's
JH>anti-RACES, anti-ham comments, and how "wonderful" LA County's comm systems
JH>went without the help of hams? Re-read what you edited out, then re-read
JH>what I wrote.

Other than trying a personal attack, Herman has not only not made his point but has indulged in a BIG LIE technique by claiming my posting (only in the .policy newsgroup) was "anti-RACES, anti-ham!" The point was lost in that the whole Southern California public safety services are quite well organized and can function without amateur assistance. By many examples of disasters from major to minor.

Herman only made two statements of a general nature, namely: 1. He had been a Southern California fire person at one time; 2. A report was a "nightmare" without further quantification based on some report. Those are suspect since no qualifiers or references were noted other than a title. Herman made no remark as to being IN the area during a quake or firestorm or flooding while this writer has, definitely, experienced more than two of each. Most FDs in the state of California are government, not volunteer fire fighters.

JH>You don't need to tell me about how hams can save the day. I've seen
JH>it myself here in Hawaii. After a hurricane, the only radio systems
JH>still operating are those belonging to amateurs.

I'll have to dispute that considering that Hawaiian state government installations should, like other states, be able to afford commercial antenna installations able to withstand wind loadings in excess of the worst known hurricane. It may be that _some_ amateur operators in Hawaii _might_ have terrific antenna structures, but wire beams strung between two buildings are not noted for robust wind loadings.

However, in the next paragraph, Herman cancels himself by saying that the amateur repeater net "rides on state-owned microwave links." Such links are NOT amateur (by statement), therefore, if Herman's claim is true, they would not be effective during a hurricane. That is not a logical construct.

JH> Unlike Len, I'm
JH>pro-RACES and pro-ARES; I *know* how vital hams are during disasters,
JH>and so does the state of Hawaii. Our state-wide rptr system rides
JH>on state-owned microwave links; the state makes every provision
JH>possible for hams.

The point was NOT that someone is "pro" or "con" amateur endeavors, only that the existing safety radio infrastructure of Southern California is organized, drills, can and does function without amateur assistance. This is as it should be for around-the-clock public safety.

One of the earlier comments by another was the assumption that all emergency calls are made through CELLULAR telephones, in ignorance of the many dedicated telco lines leased by safety and utility groups, lines that do not pass through a telco switcher and therefore not affected by switching system loading. In addition, the bandspace for public safety and private mobile radio services is quite a bit larger than amateur bands, the equipment already in place and ready to operate, the operators having periodic emergency drills over a well-established network.

In certain situations, amateur radio IS a valuable addition, but note that is an addition, not a part of the system. A public safety system should be able to provide communications essential to public safety around the clock. It should not be dependent on amateurs being notified, having them assemble and set up just to get the messages through. Such a time lag would be too great even for minor disasters.

UM>From: "Len Umina" <umina@ultranet.com>
UM>Subject: Re: more QST absurdity

UM>I think you're all missing the point. First of all ham radio is about
...
UM>As for CW being outmoded and old, I think you're finding fault with CW
UM>because you've never really tried to learn it. I've been teaching Morse to
UM>kids and adults and it's amazing what a difference attitude has. I've seen
UM>kids learn the code to 5 wpm in only two days, but the average is 2 weeks
UM>of 30 minutes per day. It's not effortless, but neither was learning to
UM>read.

Wrong analogy since visual symbol cognition (reading) uses a
different part of the brain than aural cognition. The only
"attitude" seen here is that code MUST be learned. WHY must it?
The debate on code-test versus no-code-TEST does not center on such
irrevocable absolutes that code MUST be learned.

UM>CW is about as obsolete as RTTY and SSB and FM and AM are. On shortwave
UM>it's an important skill because in a pinch anyone how knows it can
UM>communicate with anyone else who knows it with only a simple oscillator and
UM>a piece of wire. Are you willing to be the one person who intercepts an
UM>urgent plea for help on 40M CW someday from somewhere in the world and not
UM>be able to understand the request?

Why would someone in distress use only 40 Meter frequencies? The
international distress frequencies have already been established long
before the GMDRS.

UM>I can get a CW transmitter on the air in a few hours with the parts inside
UM>my transistorized AM radio.

Even a beginner in design will find such a statement ridiculous. You
may be able to salvage resistors, capacitors, other passive
components but have NO information on the house-number single chip
receiver package. If you have an old AM portable, the transistors
will again be house number parts and it is unlikely that their
f-sub-t is high enough to enable 40 Meter operation.

There MIGHT have been a case for this myth back in vacuum tube days
when a 3Q4 could have served as a "final" with a 1T4 as oscillator.
Even so, trying to get organized to do conversion on some Zenith
Transoceanic (or equal) to the miraculous 40 Meter transceiver will
already take twice the time you state...then the rewiring and parts
substitutions have to be done...not to mention the testing to make
certain transmit output power exists at all.

UM>everyone can do this, but if you can get anything to transmit, you can send
UM>Morse. On the shortwave bands, a fox hunt scenario isn't of much help. CW
UM>works. It's therefore important to have a large contingent of people
UM>trained in Morse Code who are occupying these bands.

More "Independence Day" movie fiction bullshit. The international
emergency frequencies were made such a long time ago, well before
GMDRS. The above is part of the Morse Myth based on the 1930s state
of the art in maritime communications. Learn about GMDRS.

UM>Sure Morse Code is an aquired skill, like reading, and like reading is to
UM>every day life, it's just as important (and probably will be forever) on
UM>short wave radio.

Nonsense. More of the Morse Myth from the 1930s.

UM>If you are really interested in shortwave radio, Morse Code is a small
UM>skill requirement to master for the privilege you get with the upgrade.

It is an artificial requirement in the 1990s. To some, the task is
easy. To others it is very difficult. It is a requirement because
it was ALWAYS there since the first radio days when the ONLY way to
communicate was by on-off keying. It's never been removed, partly
to allow old morse bangers SOME refuge for their skill.

UM>Of course I empathize with you because 30 years ago I didn't understand why
UM>I had to learn it either, and I didn't like learning it (in those days we

44 years ago I couldn't copy code but legally operated the HF bands,
sending RTTY and SSB. In all the years since, operating over a
greater part of the spectrum and with more modes/modulations than
available to radio amateurs, I've NEVER had to use morse code.

UM> After all, I did it, and let me tell you, if I can do it just about
UM>anyone on this newsgroup can do it. It's just attitude.

Another bullshit statement. Before I got my degree I was already
doing hands-on design work in RF and microwave equipment. "If I can
do design work, anyone in this newsgroup can" is just as applicable
as your nonsense about morse. I don't expect everyone to master
design or even kit building, so I don't see the reason to expect
others to "master code easily" by overcoming some positive attitude
deficiency nonsense.

UM>suspect as you master the mode you'll learn things about Morse
UM>Code that you never imagined, and a few about yourself.

Morse Code is NOT an Important Life Experience. Get a grip!

UM>One final comment, CW remains the most efficient mode of communication from
UM>several aspects technically.

It has only ONE efficient aspect: Bandwidth. As to ability to punch
through where no other mode can, that is true ONLY of alloted amateur
modes...and even then some of the packet systems beat on-off

assynchronous keying on low power, low signal operation. Please,
this isn't 1937 anymore, this is 1997.

UM>implement, least expensive to manufacture etc... With all of these "best
UM>in class" comparisons, I think CW is very much state of the art. In fact,
UM>because it is also language independent (Q Signals, Standard Abbreviations
UM>and No Accents), it opens communication between billions of people,
UM>something SSB other voice modes will probably need another century to
UM>accomplish.

English has been the standard civil airways communications language
for nearly a half century. There's no ICAO requirement that morse
operators be carried aboard ANY civil aircraft. Civil airways work
at jet speeds since the 1950s.

NATO forces developed the standard phonetic alphabet used in aviation
and other radio services...back in 1955. The U.S. Army does not use
morse in tactical applications, hasn't for over two decades. Both
the phonetic alphabet AND Q codes assume an operator's knowledge of a
western alphabet. DOS Tip: Most of the world does NOT use a western
alphabet! To them, an alphabet belongs to a second language they
must partially master _before_ learning code.

TL>> Thomas Foster <tlfoster@ix.netcom.com> wrote:
TL>>
TL>> > proficiency is truly a skill whose development requires many hours
TL>> > of time and energy. What other mode of communication requires this
TL>> > type of mastery? None.
TL>>
TL>> Your point? Or more specifically: How does that relate in
TL>> any way to amateur radio licensing requirements. It sure
TL>> isn't in part 97.

TL>Well, my point is this:

TL>As long as I've been a ham (35 years), there has always been a code
TL>requirement.

Make it "always been" since around 1912, the first U.S. radio agency.
So what? Back then, on-off keying was the ONLY way to communicate.
This is 1997. On-off keying is NOT the only way to communicate. 35
years ago, AM/SSB voice was already an old mode...why no operating
test on that?

TL> Requiring a proficiency for a mode of communications which
TL>is *still effective* is an excellent means for controlling the HF
TL>congestion, since it is a mastery which many folks will not care to
TL>develop.

DOS Tip: Spark (undamped) transmission is *still effective*. It's
illegal in the USA, though. But, *still effective*. So?

TL> In other words, those who have a passion for operating HF will
TL>develop the necessary skills of code, and those who don't have that
TL>passion won't! Those folks who don't desire to master the code can
TL>continue to use the VHF/UHF region.

You've NOT addressed WHY code skills are necessary, you've only said
that they are. In actuality, they are a foreign policy requirement,
about as artificial as the mode itself. Up to the VHF Ghetto for
those low-life non-real-ham scum Technicians who don't know code!

TL>Making the written tests more difficult is not the answer! That truly
TL>will limit the folks from all "walks of life."

WHY are more difficult written tests "not the answer?" How can they
be any easier without resorting to a non-test permit system?

TL> Like I said before, I
TL>believe most people can master the code. It doesn't require above
TL>average intelligence.

Morse code cognition is NOT an "intelligence" thing. It is a learned
aural-mental response having nothing to do with reasoning ability.

TL>Well, Bill, like I said before, I want the code testing as a requirement
TL>to the more advanced licenses. That will preserve the only "art" that
TL>ham radio has.

How is Part 97 to be reworded to make it a National Monument To
Morse? And WHY must the code test continue to be the essential item
to "advancement" in amateurism?

Only on voice. On CW one would use the XXX prosign. This is from an old USCG log of mine while I was sitting the 500 kc watch:

XXX XXX XXX CQ DE 3WGB 3WGB 3WGB BT LOST MAN OVERBOARD BT POSN NOW 10.37N1 10.37N1 138.22W6 138.22W6 BT NOW DIW BT CSE ES SPD WERE 182DEG1 8.5KTS3 BT LAST SEEN 0800Z BT WX WINDS CALM SEAS 1 TO 3 M BT ANI SHIPS IN AREA PSE KEEP SHARP LOOKOUT BT MASTER AR DE 3WGB K

3WGB 3WGB DE FUM FUM FUM QSL OM UP 512 K

FUM DE 3WGB R UP

EE

EE

FUM was a Tahiti shore station; he QSL'd the ship's broadcast and shifted him from 500 kc up to 512. Note the typical dit-dit exchange at the end!

Our USCG planes used SSB - of course they contained military pilots - guess
they could handle the added "stress" of turning a BFO that civilian pilots
can't.

Come to think of it - transcontinental planes already use (HF) SSB to give
position reports to ground stations.

>>unintentionally, ourselves?

John, Mr. Green firmly believed - and published - that we can all
cure AIDS with a little, battery-powered gizmo to "treat" an
affected person's blood.

I need to counseling or psychiatrist to tell me that this is a cruel
and inhumane hoax.

Why Green bought into it is immaterial - it is outlandish,
irresponsible. So...I see Green as no "challenger" to commonly-held
views on anything...I see him as an socially-irrelevant misfit.
Continuing this thread - or ANY other regarding Green - is a waste
of our time and energies.

Just my opinion, of course.

SB QST @ ARL $ARLB018
ARLB018 FCC issues changes in Amateur Radio rules (Part 1)

ZCZC AG18
QST de W1AW
ARRL Bulletin 18 ARLB018
From ARRL Headquarters
Newington CT April 2, 1997
To all radio amateurs

SB QST ARL ARLB018
ARLB018 FCC issues changes in Amateur Radio rules (Part 1)

In response to three petitions for rulemaking, the FCC has adopted changes to the Amateur Service rules that--among other changes--will make it easier to obtain 1x1 call signs for special event stations and harder to get a club station license. Other amendments to the rules included in a Report and Order released April 1, 1997, will allow hams to append special designators either before or after their call signs--or both, and will recognize, but not require, the use of a session manager at Volunteer Examiner testing sessions.

The FCC declined to give examination credit for formerly held licenses, and turned down an ARRL request for a lifetime operator's license.

Under the new amendments, the FCC will allow a licensee to substitute a self-selected call sign from the block of 1x1 call signs for temporary use during a special event operation. The station must announce its regularly assigned call sign at least once an hour. The special event call signs will be coordinated and issued by outside volunteer entities, not by the FCC. The Commission will announce later when and how volunteer entities may volunteer their services. The chief of the Wireless Telecommunications Bureau then would certify volunteer entities to serve as amateur station special event call sign coordinators, who would issue 1x1 calls from a common, online special event call sign database. By definition, a 1x1 call sign consists of a single prefix letter, K, N or W; the region number, 0 to 9; and a single suffix letter, A to W, Y and Z--750 call signs in all. The FCC turned down a suggestion that would have limited special event call signs to stations licensed to Amateur Extra class operators.

In proposing to increase the eligibility requirements for a club station license, the FCC said it was ''important to determine that

the applicant for a club station license is a legitimate radio club and not just a person seeking to acquire additional call signs.'' Under the rules changes, the FCC has raised the eligibility requirement from at least two members to a minimum of four. Applicants for a club station license must have a club name, a document of organization, management, and a primary ham radio purpose that's consistent with FCC rules.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.4, 2 March 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Updated to include module patch.
Added some general information about kernel structure.
Corrections/Updates:
Corrected ax25d configuration - thanks John Tanner, VK2ZXQ
Shuffled lots of stuff around, should be more logical now.
```

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.
Add some references to AX.25 and NetRom source documentation.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the Net-2-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-2-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>
More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is

designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

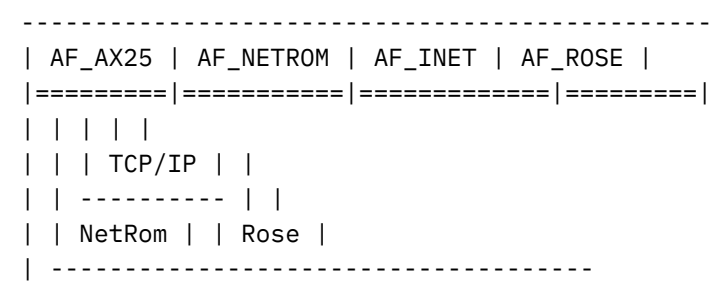
The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

3.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

Simplified Protocol Layering Diagram



```
| AX.25 |
-----------------------------------------
```

This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram on Linux Network Implementation

```
-------------------------------------------------------------------------
User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
-------------------------------------------------------------------------
| Sockets | open(), close(), listen(), read(), write(), connect()
| |-----------------------------------------------------
| | AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
|-----------------------------------------------------------------
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
|-----------------------------------------------------------------
| Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
|-----------------------------------------------------------------
| Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
-------------------------------------------------------------------------
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card
-------------------------------------------------------------------------
```

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker nel includes the desired protocol that presents a programming inter face that the call program can use. I have attempted to lay out this document in roughly that order.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/linux-2.0.29.tar.gz

The current version of Jonathons upgrade patch is available at:

ftp.cs.nott.ac.uk

/jsn/ax25-module-12.tar.gz

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/base/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

There are two different strains of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.28+module10 kernel. The ax25-utils version number indicate the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel.

The AX.25 utility programs for 2.1.22 or later, or 2.0.28+module can be found at Jonathon Naylors home site:

ftp.cs.nott.ac.uk

/jsn/ax25-utils-2.1.22b.tar.gz

or at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.1.22b.tar.gz

The older tools, capable of working with the unpatched 2.0.29 kernel are called ax25-utils-2.0.12c.tar.gz at the same sites.

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.29.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-12.tar.gz
# patch -p0 </usr/src/ax25-module-12/ax25-2.0.29-2.1.22.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...
```

The options I have flagged with a `*' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what other options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
```

```
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then edit your /etc/lilo.conf file and rerun lilo to ensure that you actually boot from it.

5.1.1. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler.

all drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin etc now present a normal network interface, that is they now look like the ethernet driver does, they no longer look like KISS TNC's. A new utility called net2kiss allows you to build a kiss interface to these devices if you wish.

bug fixed
there have been many bug fixes and new features added to the drivers and protocols.

5.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'.

The tools should compile cleanly against the kernel source without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.22b.tar.gz
# cd ax25-utils-2.1.22b
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package properly installed on your system. The configuration script attempts to locate your ncurses packages in the common locations, but some installations have ncurses badly installed and it is unable to locate them.

6. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid allocated to it. These are configured in the configuration files that will be described in detail later on.
Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

6.1. What are all those T1, T2, N2 and things ?

Just as not every ham is an engineer, not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.

T3	CHECK	The period of time we wait between sending a check that the link is still active.
N2	RETRY	How many times to retransmit a frame before assuming the connection has failed.
Idle		The period of time a connection can be idle before we close it down.
Window	MAXFRAME	The maximum number of unacknowledged transmitted frames.

6.2. Run time configurable parameters

The 2.1.* and 2.0.29+module kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port. The structure of the files is as follows:

No. Name Meaning Default
1 IP Default Mode 0=DG 1=VC 0
2 AX.25 Default Mode 0=Normal 1=Extended 0
3 Allow Vanilla Connects 0=No 1=Yes 1
4 Backoff 0=Linear 1=Exponential 1
5 Connected Mode 0=No 1=Yes 1
6 Standard Window 1 <= N <= 7 2
7 Extended Window 1 <= N <= 63 32
8 T1 Timeout 1s <= N <= 30s 10s
9 T2 Timeout 1s <= N <= 20s 3s
10 T3 Timeout 0s <= N <= 3600s 300s
11 Idle Timeout 0m <= N 20m
12 N2 1 <= N <= 31 10
13 AX.25 Frame Length 1 <= N <= 512 256
14 Max Queue 1 <= N <= 20 2
15 Digipeater Mode 0=None 1=Inband 2=XBand 3=Both 3

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

7. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to obtain the parameters for the various AX.25 ports configured on your Linux machine. For AX.25 ports the file that is read is the /etc/ax25/axport file. You must have an entry in this file for each AX.25 port you want on your system.

7.1. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your TNC.

paclen
is the maximum packet length you want to configure the port to use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you create. Create one entry for each AX.25 device you want to use, this includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry here will describe exactly one AX.25 network device. The entries in this file are associated with the network devices by the callsign/ssid. This is at least one good reason for requiring unique callsign/ssid.

This file will be used by programs described later.

7.2. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig' command. This is the object that the Linux kernel sends and receives network data from. Nearly always the network device has a physical

port associated with it, but there are occasions where this isn't necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most common is probably the KISS driver, but others are the SCC driver(s), the Baycom driver and the SoundModem driver.

Each of these device drivers will create a network device when it is started.

7.2.1. Creating a KISS device.

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

7.2.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyp*' and the slave ends are called `/dev/ttyp*'. There is a one to one relationship between masters and slaves, so /dev/ptyp0 is the master end of a pipe

with /dev/ttyp0 as its slave. You must open the master end of a pipe before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/kissattach /dev/ttyp0 port1
# /usr/sbin/kissattach /dev/ttyp1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyp0 and /dev/ttyp1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

7.2.2. Creating a Baycom device.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the baycom module using:

```
# insmod baycom
```

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

7.2.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 20 slot 10 ppersist 40 half
```

Note that the timing values are in 10's of milliseconds.

7.2.4. Creating a SoundModem device.

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models.

The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

7.2.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:

setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

7.2.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod soundmodem
```

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
# ifconfig sm0 up
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
# ifconfig sm1 up
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
# ifconfig sm1 up
```

7.2.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 10 slot 5 ppersist 128 full
```

Note that the timing values are in 10's of milliseconds.

7.2.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type
display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio
levels.

To start the smdiag utility in 'eye' mode for the SoundModem device
sm0 you would use:

smdiag -i sm0 -e

To start the smmixer utility for the SoundModem device sm0 you would
use:

smmixer -i sm0

7.2.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25
Kernel code can use. Configuration is much the same as that for a PI
or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The
ifconfig utility is used to perform this.

/sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-4.

The next step is to create an entry in the /etc/ax25/axports file as
you would for any other device. The entry in the axports file is
associated with the network device you've configured by the callsign
you configure. The entry in the axports file that has the callsign
that you configured the SoundModem device with is the one that will be
used to refer to it.

You may then treat the new AX.25 device as you would any other,
configure it for TCP/IP, add it to ax25d and run NetRom or Rose over
it as you please.

7.2.5. Creating a PI card device.

The PI card device driver creates devices named `pi[0-9][ab]'. The
first PI card detected will be allocated `pi0', the second `pi1' etc.
The `a' and `b' refer to the first and second physical interface on
the PI card. If you have built your kernel to include the PI card
driver, and the card has been properly detected then you can use the
following command to configure the network device:

/sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up

This command would configure the first port on the first PI card
detected with the callsign VK2KTJ-15 and make it active. Note the
callsign should match the entry in the /etc/ax25/axports file that you

wish to use for this port.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

7.2.6. Creating a PacketTwin device.

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

/sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. Note the callsign should match the entry in the /etc/ax25/axports file that you wish to use for this port.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

7.2.7. Creating a generic SCC device.

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

7.2.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

7.2.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration.

After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

7.2.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

```
chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM
```

PA0HZP SCC card

```
chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

DRSI SCC card

```
chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

7.2.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the

hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the
/etc/z8530drv.conf file and must appear after the hardware parameters
section.

Sequence is very important in this section, but if you stick with the
suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock
divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

7.2.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you
would a serial tty device with a KISS TNC connected to it. For
example, to configure Linux Kernel networking to use your SCC card you
could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From
JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

7.2.7.5. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

7.2.8. Creating a BPQ ethernet device.

Linux supports BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is associated with the `eth0' device, the `bpq1' device with the `eth1' device etc.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card and tested that this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more information on how to do this.

To configure the BPQ support you need to configure the Ethernet device with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry in the /etc/ax25/axports file that you wish to use for this port.

7.2.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore be modifified to look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr
```

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

7.3. Configuring AX.25 interface operational paramaters.

The AX.25 utilities packages includes a utility called axctl to enable you to configure the various parameters of an AX.25 interface.

This command is quite straight forward to use and the man page will provide you with a complete description, but an example of its use might be:

/usr/sbin/axctl radio -window 2 -t1 5 -n2 10

This command would set the Window, T1 and N2 parameters for the AX.25 port named `radio'.
7.4. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific hosts. This is useful for both normal AX.25 connections and also IP based connections. The axparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the AX.25 port named radio.

8. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you have KISS interfaces then there are two methods for configuring an IP address. The kissattach command has an option that allows you to do specify an IP address. The more conventional method using the ifconfig command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

/sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
/sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
/sbin/route add default pi0a

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

ping -i 5 44.136.8.58

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

9. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom.

9.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

name callsign alias paclen description

> >Hams seem to fear that everyone in the universe will want to join their
> >ranks unless they introduce large barriers to entry into the hobby.

Learning CW is a "large barrier"? Please!

The truth is that people don't want to learn CW because it takes a
little time and effort and they don't want to have to do it. I know that
is why I didn't want to! But it was the requirement, so I did it. Can I
just pass on the college classes that I think are bullshit and that I'll
never use and get my degree anyway? Naw.

I don't think it's so much a barrier they are trying to put up, or a
"technically unqualified" element they are trying to keep out. CW takes
a *little* effort and time to learn and I think people in this "instant
gratification" period we live in want to talk on the radio NOW.

I think learning CW shows a minimum level of committment and
perseverance that are good qualities for people in the hobby to have.
This minimum level of commitment and perseverence I am referring to
transcends all levels of hierarchy. Poor people, rich people,
handicapped people, yes, ALL people can qualify.

I am not against "no-code"licensing nor do I look down at no-code hams,
I just think I understand why learning morse code has been a requirement
and I don't think it was a bad idea.

Take care everyone and 73.

Greg WG8N

>About 3x5 inches? I haven't measured.

It is real tempting to use common 3x5 "index" card stock for homebrew QSL
cards, but be careful you don't create a card that doesn't qualify for
Postal Service post card rates.

The minimum size to qualify for post card rates is 3-1/2 x 5 inches
The maximum size to qualify for post card rates is 4-1/4 x 6 inches

The minimum thickness to qualify for post card rates is .007 inch, too, so
you can't just cut up a piece of paper, either. :)

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet. It is a suite of tools for
circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at
www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed
from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so he can use it on his laptop while working VHF contests. He is also writing it as an excuse to learn ncurses programming. His goal is a general purpose contest logger that a user can specify new contests in as they come about. It supports all bands and modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page <ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

I'd like to. Unfortunately, I don't think we're going to see any
changes anytime soon. So, its better to stick with what we have
then make things more lax.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-personal.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

- --- END Linux HAM HOWTO part 1/2 ---

123. Morse Code - Useful in the 23rd Century?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: seward@netcom.ca
Message-ID: <5hukbu$jvm@tor-nn1-hb0.netcom.ca>
Source record: 201215

From the date, the reference is to the original series of a popular TV show. (I realize that few hams have time to waste listening to such an outrageous waste of bandwidth... :))

Star Trek - the two part episode 'The Menangerie'. Captain Christopher Pike. He couldn't talk - all he could do was blink a light on and off. So that meant he could only blink once for 'Yes' and twice for 'No'; he couldn't _tell_ anyone what Spock was up to.

Even when I first saw that episode, I wanted to scream, "Hasn't anybody heard of Morse Code!!!". (Or, for that matter, the Polybius Square.)

Even 20 years ago, though, the requirement of Morse Code proficiency for an amateur radio license seemed outdated, for good reason. OTOH, with the ham bands under siege, it may happen that amateur radio may wind up without enough bandwidth to support other communications modes.

Not a radio amateur myself, I don't know if they finally got around to allowing ASCII RTTY ... and if station identification can be in ASCII too, now, instead of Morse.

(Oh: and I just noticed on the 'Net: they've added a standard for 5-level code to handle lower case; it goes something like this -

FS LS - behave 'normally', uppercase letters

FS LS LS - enter into the lowercase mode

LS - when already in letters shift (lowercase) print next letter in upper case, then revert to lowercase)

But the question about the code qualification has two components:

what kind of hobby should Amateur Radio become -

and what are the interests of the Government in reserving bandwidth for it?

Some hams are rag chewers, others pursue the elusive QSL, and others are interested in experimenting with new technologies, like SSTV, Oscar, and so on.

The last thing any ham wants is for the Amateur bands to wind up looking like CB radio; a code qualification is one way to help prevent that while still keeping the FCC's workload within limits. A technical track to ham radio, with demanding electronic theory requirements, but

without code - this should also be workable. (I have this vague notion that it was actually tried in Canada some years back...if it's working here, that would be useful evidence...)

Know what you mean, Tim! I recently had to buy an entire 901 system
just to get the included 6m module!

Howdy Dan, to the best of my knowledge and surfing, there is no complete international callbook on the web. There is however several links for info on several nations at URL:
http://pw2.netcom.com/~ac6v/page2.html#DX
Here is a summary:

QSL Info System by IK4LZH -- DX Lookup Page for Managers and DX Addresses

QSLs By BuckMaster -- US and Some Foreign. Gives Grid Squares, Lat/Long.

DL5MO QSL Info Databases search -- Three Data Bases for DX Lookups.

DK0TUI's QSL Info Page -- Callbooks for VE, UK, OH, GJ, BV, Contest QSL Info

Unofficial LX call-book -- Luxembourg Call Lookup

Russian DX/QSL Info -- From Victor RX3DIN

Brazilian QSL Manager List -- From PS7AB

QSL Information By E-Mail -- Got A Tough One ?? Try This.

QSL's FOR THE CQ WW CONTESTS --by EA5EYJ

QSLs For IOTA Contacts -- From The Island Chasers Pages

YASME Callsign Directory -- via K6PBT's Fine pages

Mike's Amateur Radio Pages -- Over 120,500 QSL Managers and 9200 direct addresses!!

Good QSLing

Actually, the one you speak of is the third BA list. The "original" one was at gnu.mit.edu.

> What's more tragic is that the list owner at tempe.gov chose to
>plagerize the name of BoatAnchors thereby impugning the BA Newsgroup as
>well.

"Boatanchors" is a generic term that dates back to at least the 50s. Hams and ham magazines have used it now for decades. That was the basis of our arguments for the creation of the BA *newsgroup* name, when those who fought against such a name said it's not widely recognized.

>We know this latter was a much careful and laborious contruct to offer
>a free avenue for those who preferred not to pay a trivial membership
>fee.

Think of it this way: With two BA lists and a NG (and now Collins and Heath lists, too) a greater number of hams who are interested in equip-ment of past decades can be reached.

> No one even in the commercial would attempt such a back-stabbing
>maneuver. Ethics are important to MOST folks.

What do you feel was done that is unethical? Choice of name? The name is generic. Free venue? It gives those who've left over the past 12 months another forum to participate in, and brought in new folks who had never sub'd to the paid list (the latter equates to more of the older equipment (and tubes) being saved rather than being dumped into landfills!).

Greetings,
Without going into semiconductor theory about how a diode actually
works,
I can give you a brief description of the operation of a crystal radio.
First thing that is assumed is that there is RF to be picked up and
detected. Agreeing to that premise, here goes. The RF signal being
transmitted is intercepted by the antenna. This is usually a long wire
that is preferably some factor of the wavelength of the desired signal
in length. The RF is conducted by the antenna to the tuning network
which rejects any but the desired frequencies. This is accomplished by
either a fixed value capacitor and a variable inductor or by a fixed
inductor and a variable cap in various configurations. After the LC
network tunes the proper frequency this signal is at this time is an AC
waveform that is amplitude modulated. That is to say that the voltage
level at any given instance is directly proportional to the audio signal
level that the transmitter is being modulated with. This varying signal
is then rectified by the diode or "crystal" which converts the varying
envelope
into a varying DC voltage. This varying DC voltage is then temporarily
stored by a small value capacitor with one side connected to earth
ground and the other side connected to the output of the diode. Across
this capacitor is connected a high impedance crystal type earphone. The

varying DC then drives the crystal element piezoelectrically which
creates the audible representation of the incoming RF signal.
I know that there will be people that pick this explanation apart,
but this is fundamentally how a crystal radio detector works.
If this is not an adequate explanation then I suggest that you attend an
electronics course or at least break out a book on basic radio theory.
If you want an explanation from a physics of all the individual parts
then perhaps you should take a physics course.Our high school physics
class covered how most of the components worked or at least the rules by
which they appear to behave.

I hope this helps,
Phil Cline N9RKA

133. Linux AX25 HOWTO (part 2/2)

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.
Note, this is not that address that users should connect to to
get access to a node style interface. (The node program is
covered later). This callsign/ssid should be unique and should
not appear elsewhere in either of the /etc/ax25/axports or the
/etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom
network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

9.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may
contain a number of entries. There would normally be one entry for
each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If
you do not have an entry in /etc/ax25/nrbroadcasts for a port
then this means that no NetRom routing will occur and any
received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

9.3. Creating the NetRom Network device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command. The nrattach works
in just the same way as the axattach command except that it creates
NetRom network devices called `nr[0-9]'. Again, the first time you use
the nrattach command it creates the `nr0' device, the second time it
creates the `nr1' network devices etc. To create the network device
for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /etc/ax25/nrports file.

9.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but
does not manage some functions. The NetRom daemon manages the NetRom
routing tables and generates the NetRom routing broadcasts. You start
NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that
it is started automatically each time you reboot.

9.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts.
The nrparms command enables you to do this. Again, the man page offers
a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a
neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms
command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a
quality of 120 and this will be locked and will not be deleted
automatically.

10. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to
configuring an AX.25 interface for TCP/IP.
Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu
of 512 and configured with the details from the /etc/ax25/nrports file
for a NetRom port named netrom you would use:

/usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
route add 44.136.8.5 nr0

or you could use something like the following commands manually:

/usr/sbin/nrattach netrom
ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
route add 44.136.8.5 nr0

Then for each IP host you wish to reach via NetRom you need to set
route and arp entries. To reach a destination host with an IP address
of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour
with callsign VK2SUT-0 you would use commands as follows:

route add 44.136.80.4 nr0
arp -t netrom -s 44.136.80.4 vk2sut-0

```
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

11. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want.

11.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the /etc/ax25/rsports file. This file describes the Rose port in much the same way as the /etc/ax25/axports file describes the AX.25 ports. This file is formatted as follows:

```
name addresss description
```

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

```
rose 5050294760 Rose Port
```

Note that Rose will use the default callsign/ssid configured on each AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you use the rsparms command as follows:

```
# /usr/sbin/rsprams -call VK2KTJ-10
```

This example would make Linux listen for and use the callsign/ssid VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

11.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the Rose device in much the same way as you did for the AX.25 devices.

This time you use the rsattach command. The rsattach command creates network devices named `rose[0-5]'. The first time you use the rsattach command it create the `rose0' device, the second time it creates the `rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the details specified in the /etc/ax25/rsports file for the entry named `rose'.

11.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named `radio' in your /etc/ax25/axports file to a neighbour with the call-sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

rsparms -nodes add 5050295502/4 radio vk2xlz

which would be identical to the previous example except that it would match any destination address that matched the first four digits supplied, in this case any address commencing with the digits 5050. An alternate form for this command is:

rsparms -nodes add 5050/4 radio vk2xlz

which is probably the less ambiguous form.

12. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

/usr/bin/call radio VK2DAY via VK2SUT

A simple NetRom call to a node with an alias of SUNBBS would look like:

/usr/bin/call netrom SUNBBS

A simple Rose call to HEARD at node 5050882960 would look like:

/usr/bin/call rose HEARD 5050882960

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

13. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

13.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
```

<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>

Where:

at the start of a line marks a comment and is completely ignored
by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in
the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports
files. The name of the port is surrounded by the `[]' brackets
if it is an AX.25 port, the `<>' brackets if it is a NetRom
port, or the `{}' brackets if it is a Rose port. There is an
alternate form for this field, and that is use prefix the port
name with `callsign/ssid via' to indicate that you wish accept
calls to the callsign/ssid via this interface. The example
should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this
configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by supplying a
combination of characters, each representing a permission. The
characters may be in either upper or lower case and must be in a
single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not
digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.

%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `parameters' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The
`parameters' line is what sets those default values. The kernel
software itself has some defaults which will be used if you don't
specify any using the `parameters' entry. The trap is that the these
defaults apply only to those rules below the `parameters' line not to
those above. You may have more than one `parameters' rule per
interface definition, and in this way you may create groups of default
configurations.

13.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
```

```
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign `VK2KTJ-0' heard on the AX.25 port called `radio' will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note the use of mode `L'.

The parameters line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/sbin/axspawn program for them. Any copies of /usr/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines provide definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

13.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

```
# /usr/sbin/ax25d
```

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by running it from the command line.

14.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports rose netrom

# Callserver
# If configured the node provides users with access to a callserver.
callserver zone.oh7rba.ampr.org

# Node Identification.
# this will appear in the node prompt
```

```
NodeId LINUX:VK2KTJ-9

# NetRom port
# This is the name of the netrom port that will be used for
# outgoing NetRom connections from the node.
NrPort netrom

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800

# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex node commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"

# Externam Command Aliases
# Provide a means of executing external commands under the node.
# extcmd <cmdname> <flag> <userid> <command>
# Flag == 1 is the only implemented function.
# <command> is formatted as per ax25d.conf
extcmd PMS 1 root /usr/sbin/pms pms -u %U -o VK2KTJ

# Logging
# Set logging to the system log. 3 is the noisiest, 0 is disabled.
loglevel 3
```

14.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For

example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ ------------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.
```

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users to enter a password when they connect. This might be useful to help protect specially configured users who have high authority levels. If the fourth field is set then its value will be the password that will be accepted.

permissions
The permissions field is the final field in each entry in the file. The permissions field is coded as a bit field, with each facility having a bit value which if set allows the option to be used and if not set prevents the facility being used. The list of controllable facilities and their corresponding bit values are:

```
value description
----- -------------------------------------------------
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.
```

To code the permissions value for a rule, simply take each of the permissions you want that user to have and add their values together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
* host * * 159
* ampr * * 159
```

14.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

14.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

node 3694/tcp #OH2BNS's node software

and to /etc/inetd.conf you should add:

node stream tcp nowait root /usr/sbin/node node

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

15. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

default * * * * * 1 root /usr/sbin/axspawn axspawn %u

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

15.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
```

```
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.
```

16. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

16.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

16.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

16.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

16.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

```
default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj
```

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

16.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

```
# /usr/sbin/pms -u vk2ktj -o vk2ktj
```

Substitute your own callsign for mine and this will run the pms,
telling it that it is to use the unix end-of-line convention, and that
user logging in is vk2ktj. You can do all the things connected users
can.

Additionally you might try getting some other node to connect to you
to confirm that your ax25d.conf configuration works.

17. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call.
They are very simple programs designed to be called from ax25d to
automate network connections to remote hosts. They may of course be
called from a number of other places such as shell scripts or other
daemons such as the node program.

They are like a very simple call program. They don't do any meddling
with the data at all, so the end of line handling you'll have to worry
about yourself.

Let's start with an example of how you might use them. Imagine you
have a small network at home and that you have one linux machine
acting as your Linux radio gateway and another machine, lets say a BPQ
node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ
node they would either have to digipeat through your linux node, or
connect to the node program on your linux node and then connect from
it. The ax25_call program can simplify this if it is called from the
ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux
machine has the AX.25/ethernet port named `bpq'. Let us also imagine
the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might
try. The `netrom_call' and `rose_call' utilities work in similar
ways. One amateur has used this utility to make connections to a
remote BBS easier. Normally the users would have to manually enter a
long connection string to make the call so he created an entry that
made the BBS appear as though it were on the local network by having
his ax25d proxy the connection to the remote machine.

18. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure you don't miss it.

You make the association with the axparms command. An example looks like:

```
# axparms -assoc vk2ktj terry
```

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

19. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

19.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

20. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

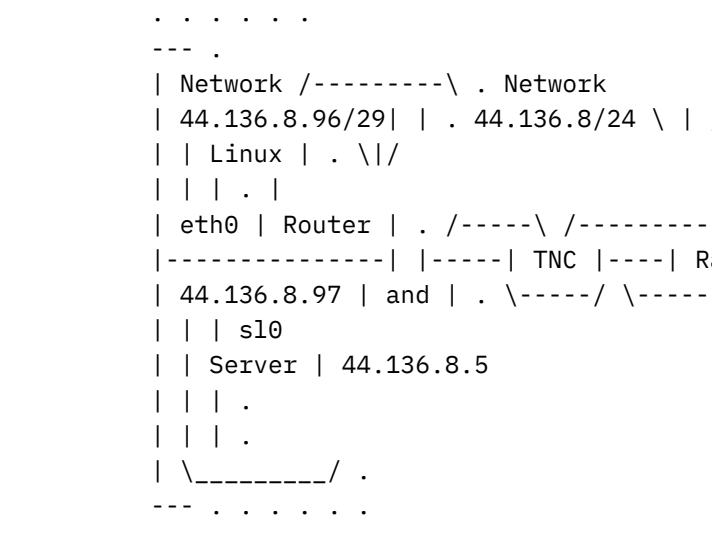
/proc/net/rose_routes
contains a list of all established Rose connections.

21. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

21.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
kissattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0
```

```
echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0
```

```
The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

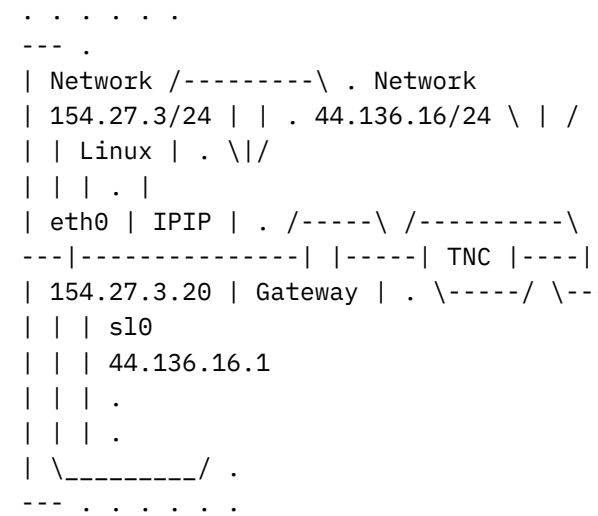
• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```
21.2. IPIP encapsulated gateway configuration.
```

```
Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.
```

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
kissattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
```

```
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
```

```
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"

22. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based implementations of the amateur packet radio protocols is the ease with which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of this document I will describe the elementary details of how you can make use of the AX.25, NetRom and Rose protocols within your software.

22.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to programming for TCP/IP under Linux. The major differences being the address families used, and the address structures that need to be mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25, AF_NETROM and AF_ROSE respectively.

22.2. The header files.

You must always include the `ax25.h' header file, and also the `netrom.h' or `rose.h' header files if you are dealing with those protocols. Simple top level skeletons would look something like the following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

22.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that 90 percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

23. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at

ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

24. Acknowledgements.

Dear Sirs,

I would like to be informed on how to acquire an integrated circuit "vp-15e1305", TAIYO or any other equivalent to this one in order to repair my FUKUYAMA VHF radio, model multi-700ax, 2m FM1-25W.

Neither in Portugal nor in Spain have I found these circuits and since I don't know any possible equivalents, I don't know what to search or where

I thank you in advance for your kind attention.

Hoping to hear from you,

Yours,

Renato Luis Espada

Need any and all info (part number, manufacturer, manufacturer number, where can I buy them , etc etc etc) for the 4-pin power connector on the back of the SB-1400 Xcvr. I need the female connector that plugs into the male connector mounted on the chassis.

I believe that the connector(s) are CINCH .... but I can't determine it from the descriptions in Allied or Newark catalogs .... anyone have better understanding of these connectors ????

Please e-mail ur answers to me at: pollitt@dmv.com

Thanx es 73

You're right, Ed. He always has something "nice" to say about the
league and their "scheme" that killed off the growth of ham radio.

One thing....if he's so big and wonderful on how to make so much
money, then why is it that there are reports of him declaring personal
bankruptcy? Hmmmmmm.

John

Interesting that your former CB callsign is first in your signature
block. That tells everyone where you come from ... too lazy to get
a real amateur radio license.

:> Kill the code requirement or kill the hobby. Your choice.

Kill the code and you will kill the SERVICE. Of course, you haven't
been around long enough to know that the FCC defines amateur radio as
"The Amateur Radio Service" or what that means.

Eliminating or minimizing licensing requirements will do to the
Amateur Radio Service exactly what eliminating the 5 minute rule,
ID rules, the prohibition on working skip, and eliminating license
requirements did to the Citizens Radio Service some 20 years ago.

:> CB Radio KADF-6895 since September, 1976

Oh gee, you got that Citizens Radio Service after most of those rules
were eliminated too!

Anyone bother to listen to all the trash and illegal operation between
26.5 and 28.0 MHz these days?

Actually, there is one thing left behind on the moon that you can
"see". It's a three-cornered type reflector which can be used with a
laser to measure the distance to the moon quite accurately. Wonder
how Wayne would explain that?

144. LogSat for Windows, sat tracking software - new beta version

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: "Roberto f." <roberto@netwide.net>
Message-ID: <01bc3f23$d01e8e80$068bd4d0@miseno.netwide.net>
Source record: 201246

Just a quick note to let everyone interested in satellite tracking that a new, fully functional beta version for LogSat Professional for Windows is now available for download at http://www.logsat.com. This release features new, strikingly beautiful, topographical maps.

I'm looking for a dual-port isolator (with or without loads)
on 220 and 440 MHz.

If you have anything available, please respond directly to:
mark.mcclain@mci.com

Thanks,

Mark S. McClain

>Satellite Program?

Fair enough. But it's interesting to note that under your logic the only satellite project I should support is SAREX/MIREX, and the only ham radio band I should be interested in keeping as a ham radio band is the 2 meter band. Why should I care about 70 cm, 10 meters, or any other band I'm not on right now?

I don't think you're correct with your comments that AMSAT-NA doesn't support Mode K and A satellites. There's an excellent book available from your local Martha on how to get started on the Russian satellites. And it continues to sell well, indicating that there is interest in those birds.

The keplerian elements for the RS birds are distributed each week by AMSAT-NA, not to mention WWW resources, AMSAT-BB, and other online resources.

If you want to contribute to the Russian amateur satellites then I'm certain we can find the appropriate contact for you. Or a much closer source to home, SEDSAT, under construction at the University of Alabama Huntsville, will have a Mode A transponder. I'm certain they'd appreciate your financial support too.

Phase 3-D may not fulfill every ham operator's dream of a perfect satellite, but it will increase the capabilities of future amateur satellites, which - in the long run - will benefit all of us.

148. Re: What's up with Wayne Green?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0204970417570001@wd1v.mv.com>
Source record: 201250

I haven't read the Wayne Green editorials lately but I know that they have always come from a controversial perspective - mainly inspiring thoughts and challenging mainstream beliefs.

The process of doing that - challenging mainstream beliefs - has shown itself to be one of the healthiest things we can do. The people that do this keep us on our toes and serve us well. Many times, they bring idealism back into reality and get us out of stupid conditions - like foreign policy that gets our sons killed in Southeast Asia. Or losing spectrum space and doing nothing but writing letters. Or seeing the future of medicine as being a continuance of symptom (effect) eliminations vs. dealing with triggers (causal) issues.

After the challenges, the question appears...do we really know what our beliefs are or did we just judge the challenger and quite unintentionally, ourselves?

Bash certainly did provide the "answers" to the cw tests. He made tapes that contained
the exact text of the fcc cw exams. The fcc probably had about a dozen of each group
to pick from. I remember seeing them at the local ham radiio store.

ICOM stopped making the band units because of slow sales. You can not
build them and only sell 2 to 4 a month. The demand is not out there
for these units unfortunely. For a factory to set up a line there
needs to be more than a few units sold. Sales should be for several
thousand units.

COLS COLUMN

LAST WEEK WE SAW HOW MICHAEL FARADAY DISCOVERED THAT WHEN TWO
INSULATED COILS WERE WOUND ON A MAGNET, A MOMENTARY CURRENT
FLOWED IN THE SECONDARY COIL WHEN THE PRIMARY WAS CONNECTED TO
A BATTERY. AND ANOTHER MOMENTARY CURRENT FLOWED IN THE
SECONDARY WHEN THE PRIMARY WAS DISCONNECTED FROM THE BATTERY.

AN ACCOUNT WRITTEN BY JOSEPH HENRY STATES THAT HE HAD ALSO
CARRIED OUT EXPERIMENTS WITH COILS AND MAGNETS AND SAYS
"BEFORE HAVING ANY KNOWLEDGE OF THE METHOD GIVEN IN THE ABOVE
ACCOUNT (FARADAY'S), I HAD SUCCEEDED IN PRODUCING ELECTRICAL
EFFECTS IN THE FOLLOWING MANNER, WHICH DIFFERS FROM THAT
EMPLOYED BY MR. FARADAY AND WHICH APPEARS TO ME TO DEVELOP
SOME NEW AND INTERESTING FACTS". HE USED HIS LARGE MAGNET AND
WOUND A 30 FOOT LENGTH OF INSULATED WIRE AROUND THE TWO ENDS
OF IT. THIS WINDING WAS CONNECTED TO THE ZINC AND COPPER
PLATES OF A BATTERY WHICH HE COULD LOWER INTO A CONTAINER OF
DILUTE ACID. ANOTHER INSULATED COIL WAS WOUND AROUND THE
MIDDLE OF THE U SHAPED MAGNET AND THE WIRES WERE LED AWAY TO A
GALVANOMETER 40 FEET AWAY.

HENRY CONTINUES "THIS ARRANGMENT BEING COMPLETED, I STATIONED
MYSELF NEAR THE GALVANOMETER AND DIRECTED AN ASSISTANT AT A

GIVEN WORD, TO IMMERSE SUDDENLY, IN A VESSEL OF DILUTE ACID, THE GALVANIC BATTERY ATTACHED TO THE ACID. AT THE INSTANT OF IMMERSION. THE NORTH END OF THE NEEDLE WAS DEFLECTED 30 DEGREES TO THE WEST, INDICATING A CURRENT OF ELECTRICITY FROM THE HELIX SURROUNDING THE MAGNET. THIS EFFECT, HOWEVER, APPEARED ONLY AS A SINGLE IMPULSE....

I WAS HOWEVER, MUCH SURPRISED TO SEE THE NEEDLE SUDDENLY DEFLECTED FROM A STATE OF REST TO ABOUT 20 DEGRESS TO THE EAST, OR IN A CONTRARY DIRECTION WHEN THE BATTERY WAS WITHDRAWN FROM THE ACID". HENRY PLACED AN ARMATURE (SOFT IRON PLATE) ACROSS THE NORTH AND SOUTH POLES OF THE U SHAPED MAGNET. HE FOUND THAT WHEN THE ARMATURE WAS REMOVED OR PARTLY REMOVED FROM THE MAGNET, "A CURRENT WAS CAUSED WHENEVER THE MAGNETIC FLUX THROUGH THE COIL OF WIRE WAS CHANGED".

THIS IS THE PRINCIPLE OF THE TRANSFORMER WITHOUT WHICH MODERN SYSTEMS OF ELECTRICAL COMMUNICATIONS, WOULD BE EITHER IMPOSSIBLE OR HOPELESSLY UNECONOMIC. IN 1838 HENRY SHOWED THAT USING DIFFERENT NUMBERS OF TURNS OF WIRE ON THE MAGNET THE VOLTAGE COULD BE STEPPED DOWN, AND THE PRINCIPLE OF THE TRANSFORMER WAS ESTABLISHED BY THIS PHYSICIST A QUARTER OF A CENTRY BEFORE INDUSTRY WAS SUFFICIENTLY DEVELOPED TO UTILISE IT.

I HAD THOUGHT THAT HENRY'S STORY WOULD END THIS WEEK, BUT NO WE HAVE ONE MORE WEEK TO GO WITH THIS REMARKABLE MAN.

73S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(14 MARCH - 20 MARCH)

ISSUED ON 28 MARCH 1997

Date 21 22 23 24 25 26 27

10cm 71 71 71 71 71 70 72
A 7 10 3 8 13 14 (6 ESTIMATED)
T 7 7 3 14 24 16 8

SOLAR ACTIVITY WAS VERY LOW 21ST TO 26 MARCH, AND LOW ON 27TH.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET ON 22ND TO 24TH, AND 27TH; QUIET TO UNSETTLED ON 21ST; UNSETTLED ON 25TH, AND UNSETTLED TO ACTIVE ON 26TH.

FREQUENCIES WERE NEAR MOSTLY NEAR PREDICTED MONTHLY VALUES WITH DEPRESSED PERIODS TO 15 PER CENT ON 23RD AND 27TH MARCH, AND ENHANCED TO 15 PER CENT FOR SOME TIME ON 25TH MARCH.

FORECAST (28 MARCH - 03 APRIL)

SOLAR: VERY LOW TO LOW.

GEOMAGNETIC: UNSETTLED DECREASING TO QUIET TO UNSETTLED.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES FOR LOW LATITUDES
NEAR TO 15 PER CENT BELOW FOR MIDDLE AND HIGH
LATITUDES.

ARLD014 DX news - EXCERPTS

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX bulletin, the 599Rpt, Jeff, N4UQM, 425DX News, Paul, K1XM, and Contest Corral from QST. Thanks to all.

ANTARCTICA. Juan, CE9OH, is still active daily on 14260 khz, from 2200 to 2400z. Nick, EM1HO, is QRV from Vernadsky Base on all bands. QSL via I2PJA.

GUERNSEY, GU. Bob, W7MAE, will be active from this Channel Island March 24 to April 5, signing either MU/ or GU/homecall, using SSB and some RTTY.

GUAM, KH2. Jeff, N4UQM, is QRV from Guam using RTTY. He will try to make as many QSOs as possible on 80, 40 and 20 meters. QSL via WB4UBS.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 297 - excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1YY, W3UR & The Daily DX, K4MZU, N4GN, N5VWM, W5IJU & Island/DX News, W5KSI, K8CH, 4L2M, DJ7IK, DL4VBP/N0PS, G4BUE & DX News Sheet and VA3CW for the following DX information.

The 'DX News Sheet', reports that Pierre, HB9AMO, will be active for two months as 9Q5BQ from Kinshasa. Operation will be on CW on 20 meters with a vertical, but activity on other bands will come soon. QSL to home call.

In a news release by Tim, N4GN, he reports:
'Planning for the BS7H 1997 DXpedition to Huang Yan Dao (Scarborough Reef) is proceeding on schedule. Several team members, including Wang, BA1OK and Kan, JA1BK, met recently in Guangzhou to finalize all details regarding the ship with Captain Wang Jian-xi and his crew. Arrangements were also made for generators, fuel, food and the numerous other supplies necessary to ensure the success of the operation.

EA8 & EA9, CANARY ISLANDS AND CEUTA (WPX 20-meter shootout) Pekka, OH1RY, and Martti, OH2BH, have decided to activate EA8AH (Canary Islands) and EA9AM (Ceuta) respectfully. Both stations will be running single band 20 meters in the CQWPX SSB, and you may catch them to prior the contest which is the weekend of March 29-30th.

Look for Bob, W7MAE, (ex K7RDH) to be active this week until April 5th, as MU/W7MAE or GU/W7MAE. Operations will be on SSB with some activity on RTTY. Look for him on 20 and 10 meters. QSL to home call.

Rich, KF8UN, will be /KP2 from March 26th to April 2nd. He will be an entry in the CQWW WPX SSB Contest. QSL to CBA.

Well known DXer Wayne Mills, N7NG, has been appointed by ARRL President Rod Stafford, KB6ZV, to chair the DXAC. Congratulations to Wayne. By the way, Wayne will be one of the operators to the next BS7 DXpedition (Read BS7).

Al, NH7A, will be on for the CQWW WPX SSB Contest on all bands, high power. He will be looking for Europe on 20 meters 0500-0800z. QSL cards will be shipped from the printer April 10th. QSL this operation and AH7G via N2AU.

'The Daily DX' reports that S0RASD will be active from March 27-31st. Operators include EA2JG, EA3CB, EA3CZM, EA3GBU, EA4TX and S01A. Other operators may include EA1DAV, EA2CNU and EA4AFA. The will be on both SSB and CW. They will participate in CQWW WPX SSB. This DXpedition is sponsored by LYNX DX Group.

Bernhard, DL2GAC, plans to be on next weekend (March 29-30th). His callsign is currently unknown. QSL to home callsign.

The 'DXNS' report that Jim, G0IXC, will be active next month between April 9-30th, as V47XC from Hurricane Cove. Activity will be SSB on 40, 20, 15 and 10 meters with a dipole and tri-band yagi. QSL to home call.

Thomas/DL3FDU, Felix/DL8OBC/N5BC and Patrick/DL4VBP/N0PS will be active from Izmir, March 25-31st. They will take part in the CQWW WPX SSB Contest and have the permit to use the special callsign YM3DL throughout their stay.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the

It certainly is a relevant question when there is no compelling need for
such testing... or does Deignan believe in testing for testing's sake?

So how does Morse code testing, or mode testing for that matter, make one
"technically qualified"? Since it doesn't, there is no need for mode
testing.

162. 1x1 callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <5htr28$84q$1@reznor.larc.nasa.gov>
Source record: 201264

Some weeks ago I read an announcement that the FCC had stopped issuing 1x1 special event callsigns. I just came across an FCC order this morning which addresses this issue as well as several other unrelated amateur radio issues. Check out:
http://www.fcc.gov/Bureaus/Wireless/Orders/1997/fcc97099.txt

It appears that self-selected 1x1 callsigns will now be administered by volunteer callsign database coordinators. The FCC will propose rules for eligibility to become a database coordinator. I assume that the ARRL would be a likely candidate. It was not made clear exactly what the criteria will be for defining a "Specical Event" in the FCC order. Anyway, the fear that the 1x1 calls would be auctioned off appears to be entirely unfounded.

There were also other rules modifying the criteria for club station callsign eligibility, VE teams/liasons, self assigned indicators (e.g., KP2/W1AW), and license examination credit. Overall, it appears that the FCC is still spending some time trying to fine tune Part 97, mostly to our benefit.

Gosh, a lot of discusion about CW codes in this news group!
Anyway, I order to follow better, I would like to know what are the different ham licences in the US.
Here, in Norway, we have the "A" license: 12 wpm, and technical stuff, and "B" license: 8 wpm and lighter technical stuff. The "B" license allows only CW and max. 15 W output. Since last year, there is also a "C" license which is without codes but allows only VHF, I believe. Anyway, not my cup of tea!
Well, my callsign LA0HA can tell you that I have an A (not LB or LC) license and the "0" tells you that I am a foreigner (Belgian) living in Norway.
So, do you, US ham, have a meaning to your K, A, W, etc. or is it just randomly given?
Thanks and see you maybe on 20 meters on ... CW!
73 de Mike LA0HA

165. What is Packet Radio?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9704020801391341 6@atdbbs.com>
Source record: 201267

What is Packet Radio?

Packet radio is computer-to-computer communication using radio links rather than telephone lines. Instead of sending a continuous stream of information, data is assembled into neat little bundles called packets. These packets are sent one at a time. When a packet arrives error-free, the receiving station sends an "okay" message (called an ACK) and the next packet is transmitted. If the receiving station detects an error, it discards the faulty packet and does nothing. After a certain amount of time has passed without an ACK from the receiving station, the transmitting station sends the packet again. These exchanges take place at high speeds, resulting in efficient digital communications without errors--a remarkable feat for a radio-based computer network!

Amateur packet exists as a loose global network. Through packet radio, you can tap into this continuously flowing stream of data and exchange information with stations throughout the nation and the world. From the fascinating to the absurd, it's all on packet!

Most VHF packet activity takes place on 2-meter FM. You'll also find packet on 222 MHz and 420 MHz. Packet is alive on 6 meters as well--with many opportunities for packet DX.

What Can I Do With Packet?

The answer depends on your interests! Every amateur has different uses for packet. Some view packet as a tool to enhance their overall enjoyment of Amateur Radio. Others take it further, using packet as their primary means of communication.

To make things simple, let's list the most popular applications of VHF packet as it exists today:

[ ] Enjoying live keyboard-to-keyboard conversations.

[ ] Accessing packet bulletin boards to exchange messages with other amateurs and read general interest bulletins. Some bulletin boards offer additional services such as electronic call sign directories and magazine bibliographies.

[ ] Participating in the ARRL National Traffic System. (Packet bulletin boards can be used to receive and originate NTS traffic.)

[ ] Using DX PacketCluster systems to hunt HF or VHF DX. Through PacketClusters you can determine which DX stations are on the air at the moment--and where they are! DX PacketClusters support other useful features as well.

[ ] Monitoring and communicating with amateur satellites. Many satellites function as orbiting bulletin boards, relaying packet messages around the world. Others transmit images that you can display on your computer screen.

A basic packet station consists of a 2-meter FM transceiver, a personal computer and a terminal node controller (TNC) or multimode communications processor (MCP). TNCs are priced around $130. MCPs, which offer other digital modes in addition to packet, typically sell for about $300. Almost any computer can be used with the TNC or MCP of your choice. All that's required is a compatible terminal program. Some dealers listed in the pages of QST offer terminal programs for as little as $10.

For 2-meter packet operating, fancy antennas are not required. A simple ground plane is fine for most areas. If packet activity is hot and heavy where you live, just the rubber duck antenna on a hand-held transceiver may be all you'll need! If you'd like more information, pick up a copy of Your Packet Companion at your favorite amateur dealer. You can also order this book directly from the ARRL.

Try the Radio Shack AM/FM/CB diguise antenna. I've had two on different
vehicles and I think they are great. You should replace the cable that
came with it with some good coax. I ran mine into a spliter and one
lead goes to my car radio (where reception improved dramatically!) and
the other lead to my scanner.

168. HELP!!! Phelps Dodge 4-Bay Commercial Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: sidener@saucer.cc.umr.edu
Message-ID: <5httnk$c6i$1@news.cc.umr.edu>
Source record: 201270

HI, I have a problem that I need help with.

Here it is: I just got a Phelps Dodge Commercial antenna that I believe is tuned for the 160MHz band.

Phelps Dodge does not make antennas anymore so I can't get any info from them.

The antenna is approx 20 feet tall and has 4 loops attached to it they alternate sides. The wiring harness is inside the poleas opposed to being outside where I can see it.

I want to convert this antenna to the 2 meter band.

How can I make a new wiring harness for it and do I have to change the size and or spacing of the loops?

I don't even know what impeadance the loops are.

How do I find out and how do I make the harness? 1/4 wave lengths? etc.

Any help would be greatly appreciated.

Thanks,

Scott Sidener N0WFL sidener@umr.edu

170. New Ham's Opinion on CW and thanks

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-02 00:00:00 UTC
From: Viking <viking@add-inc.com>
Message-ID: <01bc3f89$d5eed5c0$3008aacf@viking.add-inc.com>
Source record: 201272

Hello, as a new ham who just got my call sign on the web today as a Tech-PLUS, I would like to throw my 2 cents worth in before I quit reading any post that has any discussion about CW, pro or con, forever.
1)I studied for about 6 weeks every day or every other day and I had no problem with the Novice written, Tech written, or 5wpm code test. I do not say this to support or disparage code, only to point out that it just isn't that big of a deal to learn 5wpm code. (Now I am studying for my General and 13wpm, which I learn gladly)
2)As a daily reader of this newsgroup I have thoroughly enjoyed most conversations and I have gotten numerous responses to all of my posts about getting licensed, learning code, and pro's/con's of various rigs, antennas, and feedlines. My thanks to the great majority of you that support and encourage new hams and take the time to answer our posts, and to the VECs who take the time to test us.
3)I have come to the conclusion that all this squawking about code being some great unfair form of discrimination is coming from maybe 10% of licensed hams (tops) and the rest from those who are not even licensed. Lets face it, code is not the only restriction. To get a higher class license you also need more technical knowledge to pass the written exams. It seems to me that the current reward system of a higher class license for more knowledge and dedication makes perfect sense. First, you can get a no-code Tech license quite easily. It just keeps you off the world-wide HF bands. This allows you to get your feet wet without sending radio waves 2000 miles away. Then at 5wpm we have the Novice and Tech-Plus (does anyone start as a novice anymore anyways?). A taste of HF with world-wide communication via CW and voice on 10M. A chance to talk to others in far away places while you expand your knowledge; electronic, radio, and CW. Then at 13wpm we have General, which adds bands and voice privileges on parts of every band which allows voice. With General you can basically do it all. Then we have Advanced and Extra. They just get a little more bandwidth as a reward for their hard work. A little more elbow room to experiment in away from the RF interference of those who have not worked as hard. This seems perfectly fair to me and I have not even been on the air yet.
4)Those who endlessly whine about a perfectly reasonable system are casting a bad light on amateur radio for no good purpose. The system is set up to give increasing privilege and bandwidth (and responsibility for proper use of that privilege) for increasing your knowledge and dedication. If we let everyone transmit whatever they want on any available frequency just because they sent in for a call sign without acquiring the requisite knowledge the airwaves would be a mess. And I'm not sure I want the whiners who haven't learned code yet (please learn it, it's fun!) representing America on the worldwide HF frequencies anyways. Thankfully, none of the hams I have met in real life have shown the bitterness and immaturity I

have seen circling around CW in this newsgroup. To those who feel the need to continue this needless debate, you merely cast a poor light on yourselves and the amateur radio service as a whole.

Price Reduced!

Yaesu FT-11R/38 2 Meter Hand-held Rig for sale. Optional 9.6 volt 600 mAh rechargeable battery included for a full 5 watts power output even while handheld. 4 selectable power modes and Automatic Power Off.

Two independent VFOs, 150 memories, call channel, alphanumeric naming of frequencies, DTMP message paging (10 memorized messages can be stored and sent), 10-memory-15 digit DTMF autodialler. Selectable lighting modes on keypad and display and more.

Package includes the PA-10 mobile adapter, the FBA-14 "AA" Battery Pack and the CSC-61 vinyl case. Original cost of equipment over $400.00.

Very light usage. Perfect shape and like brand new. All original boxes and manuals. $265.00, buyer to pay shipping.

>I find it hard to argue against your logic, but I also believe that
>we have the dual problems of preventing yet further hf congestion and
>also populating and defending our vhf and uhf spectrum. The present
>system appears to offer a mutual solution for both of these.

Well, I disagree that HF needs to be congested. That's the old
1934 argument that HF could only support 16,000 amateurs dressed
in slightly newer clothes. Using 1930s technique, that argument
might have been supportable to a degree, but adoption of newer
techniques allowed us to accomodate over 365,000 amateurs in
the HF spectrum once thought only capable of supporting 16,000.

Now the technique used to do that is currently over 40 years
old in amateur practice. Those 4 decades are less than the
span of the previous 3 decades which allowed us to move from
16,000 stations to 365,000 stations on HF, an increase of nearly
23 times. But amateur practice has remained static for the last
4 decades, so we haven't seen yet another 23 fold increase in
capacity. But we easily could.

There are techniques which would allow an even greater increase
in band capacity than 23 fold which have become available in the
last 3 decades. But unlike in the earlier decades, amateurs have
been resistant to adopting these newer and better techniques. Why?
Because they've had restrictive regulations in place to maintain
the status quo without resort to adopting an improved state of
the amateur art.

The net effect of this is that amateur radio has steadily fallen
further behind government and commercial practices, IE it has
stagnated technically at a level well behind the current SOTA
because there has been no incentive to improve. I view this as
extremely harmful. The regulations have been rigged so that
meeting our major charter goals have been hamstrung. That's
because the old saw is true that necessity is the mother of
invention (or the adoption of superior inventions). Good
enough is always the direst enemy of better. We've arranged
to restrict numbers so that decades old technologies have
remained good enough, thus we've virtually eliminated any
incentive to do better.

I have previously outlined one of several methods which would
allow half a million amateurs to be supported in a single 200 kHz
band segment *with the same throughput they enjoy now*, and without

increased mutual interference. And this method has become less expensive to implement than current SSB methods thanks to the availability of VLSI subsystems of great power and low cost. But current amateurs have no incentive to adopt this method because they have been able to artificially restrain amateur numbers on HF by clinging to archaic and irrelevant testing barriers and restrictive emission regulations. This is a varient of the "I've got mine" position articulated by so many of the pro-Code testing faction. They don't want to have to learn something new, or do something differently (but that's what amateur radio is supposed to be about).

>> >It seems to me that if the no-codes abandon the vulnerable vhf bands,
>> >then these will be left underused and undefended.
>
>> Sure, but do you think that amateurs are going to wholesale abandon
>> their very useful VHF/UHF spectrum just because they can also operate
>> HF? Are the only people using VHF/UHF Techs? Certainly not.
>
>Not only, but my belief which I feely confess lacks any factual
>support is that a very large part of the non-mobile vhf voice
>activity is by those unable to move elsewhere.

I think you are wrong. I think a majority of the VHF+ fixed stations are operated by amateurs holding licenses which allow them access to HF too (that's frankly almost tautology since coded amateurs still outnumber code test free amateurs). Of course I'd also note that the majority of VHF+ operation is *not* from fixed stations anyway, so the point is moot. The vast majority of VHF+ operation is via man portable or mobile equipment, and Tech Plus, General, Advanced, and Extra operators are about as likely to have and use that equipment as are Techs.

>If an altenative model could be found which protected both hf from
>overuse and the frequencies above from underuse, I would not fight it
>on the principle that Morse Code skill was necessary for hf operation.

Well, consider that the spectral commons is not like grazing land. It is not used up by being used, IE we can't "overgraze" it and damage it as we can range land. If we could, then every Dx pileup would leave a damaged spot in the spectrum. But of course that's absurd. Even in a Dx pileup, contacts are made, so the spectrum remains functional, and when the pileup dissipates, the spectrum is good as new. But we can do *much* better before we reach the Shannon bound on capacity. We could accomodate *every* amateur, coded and code test free, on a single HF band with less mutual interference than the current users experience using their outmoded techniques. But by restricting numbers arbitrarily on HF, we've removed the incentive to adopt better technique.

Talk of HF being overcrowded only makes sense if we make the implicit assumption that we're going to limit ourselves to

current amateur techniques forever. And that's a recipe for
the destruction of the amateur service because it abandons
our charter goals, and gives the perception to the public
and the regulators that we aren't using the spectrum allocated
to us to best advantage (which of course we really aren't).

>Jack

Well gee, Jack, if you're willing to pay the difference in launch costs, AMSAT will be happy to use a different launch supplier. But realize that ESA has only had one launch failure with an AMSAT satellite on board, that was P3A, and our ride was *free* on that one because it was a developmental flight. ESA has given amateurs a free (or very reduced cost) ride up until now, as a piggyback payload, and they're only charging $100,000 for the P3D solo launch to GTO. If you know of another launch supplier who'll give us a ride to GTO for $90 a pound, lets hear about it.

The Chinese Long March (which doesn't have a sterling success record) costs 10x as much. Atlas II is even more (and has had failures too). Titan holds the all time record for longest launch delay, 1000 days sitting on the pad before it was ready to go, and Titans have blown up too, and cost even more than an Atlas II launch. And Shuttle is over $20,000 a pound, can't even reach GTO, and has had a spectacular failure of its own. The Russians recently had a blown launch too. Now Proton is about the most reliable launcher in the world, but guess what a GTO flight costs using it? It's quite a bit more than a Long March.

ESA gives amateurs a very cheap ride (way below their cost). The tradeoff for that has been some launch delays, and one launch failure, because we get all the new developmental launches at that price. That's a good tradeoff. We couldn't afford to launch on Atlas, or Titan, or even Proton.

Duh. "50,000 mail transactions a month" at, say 2K a mail message is a whopping 100MB, which would occupy a T1 line for about ten minutes out of the month. I always wondered how the old BA admins could possibly spend so much money just running a mailing list, but I believe I'm beginning to figure it out.

> Think "T1 line costs",

We're not moving live audio or video here. Think "28.8 modems" or "ISDN", or think "colocate and piggy back on somebody's line" (either scrounge it for free, or pay a ISP a few bucks a month to host the list.)

>think "$1,000+ software packages and updates",

Think "Linux" or "NetBSD" for free. Think "use an older machine that comes with a license for a stable OS already, and latest sendmail is free from Berkeley."

> think "Unix servers"

Think that Unix runs on 486s just fine. If you think cheap PC-class hardware is too flakey, think that something a few years old, like a SPARCstation 1+, could handle the load nicely and is cheap as all get out without a monitor.

Now, if the BA admins want to charge something to compensate themselves for their labor, and the BA subscribers find the service enough better than the alternatives to be worth the charge, I have no problem with that. And if the BA admins want to take the fees they collect and spend them on overkill hardware and comm costs so they have nice toys and avoid generating taxable income, that's their own business. But don't try to sell it as "just partially covering unavoidable costs."

[Totally bogus crossposting to r.r.a.homebrew, r.r.shortwave, and r.r.swap simply eliminated. Followups set to r.r.a.misc.]

!! Ancient Chinese Fortune Reading !!

There's a 5000 Year Old Fortune Reading Secrets of China that
Will Reveal Your Whole Life before your own eyes !
Just by submitting your birth year, month, day and time, you can
have clear insights on what's ahead of you and what you can do to
improve your luck and prevent a bad luck. Unlike other 10 minute
Fortune readings that tells you a fraction of you life, this
incredible Ancient Chinese Fortune Readings I have acquired through
continuous studying covers your whole life leaving you with complete
satisfaction and comprehension. It covers Younger years, Middle
years, and Silver years including subjects on Money, Love, Fortune,
Misfortune, Off-Springs, Siblings, Career, Success, and your Life
Expectancy. It even covers on the disease you are prone to from the
birth so that you can keep yourself aware and what year it is good
for you to conceive a child and give birth to. It also covers your
children's suitable career and success as well. So after all, it's
not just for your benefit to know what to watch out for and what to
go for. It's for your family's benefit as well since the reading
covers generations.

Just send a check or money order in amount of $19.99 to the address
below to receive your own copies of a complete and comprehensive
readings of your life. Do not miss on this introductory offer!
You will not be disappointed. For those of you who do not know the
time you were born, just submit year month and day anyways to get a
reading that will change your life forever.

Make your check payable to :

There is another side to this that many of you might not know. The one thing I have observed about Wayne Green -- and its 35 years of observing -- is that you never count him down and out as long as he is breathing. In fact, the farther down he is, the more vitriolic his "comebacks" are and the more successful he is at discrediting and destroying those he considers as enemies.

Is a lot of this staged for the benefit of the audience; ie: you and me? That I cannot say. But he is exceedingly cleaver in areas of "selling" Wayne Green. In fact, he ranks with P.T. Barnum in that regard.

Just think of this. He has become a "regular" guest on Coast to Coast AM -- the highest rated talk-show in the history of late-night / overnight broadcasting. I doubt if Art Bell would bring him back time and time again if he was not a ratings builder because in commercial broadcasting, ratings are the only thing that matters.

I am in the t-v broadcast business. Every star, personality, guest and even "extra" on every program is "rated" on audience appeal by numerous data gathering services. In television its called a "TV-Q" or "audience affinity quotient rating." Its a "how much did the audience notice this person and how much was he/she liked." Each show has its own preset TV-Q minimum. If you do not pull that minimum number you are never heard from again. Thats the way the business is.

Live talk-radio uses the exact same type of rating system. The hosts may deny same, but the "bean countetrs" that own the shows and the networks leave nothing to chance. Its an exacting science. There are even companies that specialize in "target audienvces" for specific types of TV shows; ie: a live TV (to tape) sitcom about the elderly will generally have a tighly structured "mature" bussed-in live audience. The producer of a live (to tape) variety show may hire a consultant firm to secure a "yuppie" audiece of midle-income yupwardly mobile 27-35 year olds. As I say, its an exacting science an even in talk-radio there are tens of millions of dollars a year in ad revenues hang in the balance.

And amid all of this, Green is not only a regular on Coast to Coast AM, but has other "talk radio" gigs as well. Based on my knowledge of the entertainment industry and of Wayne Green, I kind of think that there may be a lot more here than you see on the surface. Spell "A lot more" with a lot of $$$$$$.

Hi Radio experts. I know nothing about radi, but would be grateful for an answer to this question.

I live in the US and want to receive BBC World Service, shortware is inadequate and not always available.

The BBC sent me this answer :

"However, the Americas stream for the USA and Canada can be received 24 hours a day direct-to-home, free-to-air via the Satcom-C3 satellite at 131 degrees west, C-span transponder at 3.840 GHz, vertical, audio subcarrier at 5.41 MHz."

Would I be able to but equipment, as inexpensively as possible, to receive this feed?

Potential responders, please reply to my email address as well as the Newsgroup. Thank You.

This is perhaps an overstatement. A challenge is not the essential
element as a qualifier for an amateur radio license. The requisite
knowlege is all that is tested for in any of the examinations. They
don't ask how hard it was for you. Furthermore, as has been pointed out
on numerous ocassions by Todd Little, if there was no challenge to
passing any of the written exams, you wouldn't have any Generals - they
would all have an Advanced.

>I'm sure that even the most hard-
>core CW-test-haters would agree: If everybody could get an Extra ticket on
>their first test date, the airwaves would be teaming with newbies, many of
>whom would lack the learned respect for their hobby.

If the problem your trying to solve (via Morse) is caused by "newbies" and
their lack of experience, there is quite a simple and much more
straightforward solution: require that they not be newbies! Put a "time
in grade" requirement into effect. The code did not prevent this newbie
from upgrading to Extra.

>In my own humble opinion, many of those who call
>themselves "No-Code" activists are simply along for the ride -- selfishly
>awaiting the day when they can rush to the local W5YI session, take 3 theory
>elements, and walk out an Extra.

And this despite any and all evidence to the contrary - like the license
class of the "No-Code activists" you refer to. There are 5 written
elements; 170 questions out of 1700 in the question pool. Privileges
principally include operating a radio. I find courteous and lawful
operating to be of the greatest importance. And I like the fact that we
have a hobby where studying applied electronics allows you to acquire a
license to build and operate transmitters. But the rigors of properly
operating an amateur radio are no where near as demanding as one might
gather from all the rhetoric presented here on the newgroup. However, it
does take practice to do it well.

Still practicing,

ac6xg

The GMDX Group is re introducing the Scottish Activity Weekend. in an effort to encourage activity by all Radio Amateurs in Scotland and provide a world wide interest in contacts with Scottish Stations.

The 1997 activity weekend will start at 0001z on the 19 April and last until 2400z on 20 April.

A certificate "The Scottish Activity Century Award" will be awarded for contacts made or logged during the event as follows.

Scottish Participants

contact with overseas stations 2 points per station per band
contacts with UK/Eire stations 1 point per station per band
contacts with Scottish Stations 0 points
Novice participants contact points x multiplier of 2

All Other Participants

Contact with GM/MM prefix count 1 point per band
Contact with GS/MS prefix count 5 points per band
Contact with 2M prefix count 10 points per band
Novice participants points x multiplier of 2

SWL participants

On a heard basis for logging stations in contact with Scottish stations as above(note no more than 3 loggings including the same Scottish station in any one hour period.)

Award requirements

Fee 3 GB pounds or $5 or 10 IRCs

Basic Award requires 100 points
Silver Award requires 150 points
Gold Award requires 200 points

Logs and applications to

187. Invitation....!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-03 00:00:00 UTC
From: cmpcgve@debate.com.mx
Message-ID: <860096928.4235@dejanews.com>
Source record: 201089

Hello everyone:

You may be wondering what XE2HLR means... It is my Amateur Radio callsign. It is used to identify my Amateur Radio transmitting station whenever I am on the air.

Amateur Radio is a non-commercial radio service. Most Hams enjoy communicating with people around the world as a hobby, but Amateur Radio is also used to provide public service, emergency, and disaster communications in time of need, free of charge.

Amateur Radio has also been one of the greatest learning experiences of my life. Not just about electronics and radio technology, but about people, and human interaction. I continue to become more facinated with this meduim every day.

I've not been extremely active in Amateur Radio, but some of the activities that I enjoy are:

2 meter FM 1200 baud packet (computer communications) y HF all bamds

I am a member of the Federaci&#65533;n Mexicana de Radioexperimentadores, A.C., which is an organization devoted to promoting and supporting Amateur Radio. The FMRE is the principal representative of the Amateur Radio Services, serving members by protecting and enhancing spectrum access and providing a national resource to the public.

FMRE, society member of IARU (International Amateur Radio Union), that join more than 8,000 radioamateurs in Mexico, celebrates it&#65533;s 56th anual convention and we are plased to invite you to attend it. It will take place at the beautiful Port of Mazatlan, Sinaloa, Mexico, from october 23 to october 25.

The Playa Hotel MAZATLAN, wil be the place of this important event where we have the oportunity of getting togheter and have a great time with many of our good friends from radioamateur world. On the romantic Pacific where you celebrate "Fiesta" every day with the most hospitable people in Mexico, you can stay at HOTEL PLAYA MAZATLAN, one of Mexico's finest and most popular hotel.

Hotel Playa Mazatlan is located in the heart of the Golden Zone and along 4,000 SQ. meters of the best beach in Mazatlan.

The Hotel has 425 air conditioned rooms most with ocean view, satelliteTV, private balconies or terraces, its own water purification system assuring you a safe drinkable water right down to the ice cubes in your favorite drink.

Of course, we have three large heated filtered pool and jacuzzi,
excellent food and world famous friendly service, all at an affordable
price. http://www.mazcity.com.mx/playa/

Come join us....!!!!! Get caught up in the excitement of our 97
Convention.

En buen plan..... nos vemos en Mazatlan......

Greetings.....!!!!!!

In article <334408A3.6E92@clark.dgim.doc.ca>,
Jim Cummings <jcumming@clark.dgim.doc.ca> wrote:

>However,
>since the government's legitimate concern is the mititigation of interference
>is among the users of the radio frequency spectrum,

Cummings keeps quoting this "mitigation" claim, but the real question is
"Who says this is true"? I keep seeing people post this fallacy, but I've
never seen any evidence to support it.

>Since Morse code testing has utterly failed to do so, what justifies Herman's
>proposal to expand operational testing when Morse code has utterly failed
>produce the desired results?

Cummings assertion that morse code testing has "failed" is an irrelevant
opinion with no basis in fact. Under what criteria does Cummings judge
the morse test to be a "failure"? Cummings uses abject criteria to
claim something that he disagrees with as a "failure" because he himself
doesn't like it.

In typical "lowest common denominator" fashion of the welfare-state
mentality, Cummings then attempts to erect a strawman claiming that
since morse code testing has "failed" (something never established)
then by 'definition' "all" operational tests are invalid. The true
reason for Cummings' claim is that any operational testing implementation
would go against his "give away the licenses" beliefs. Cummings
attempts to further justify this with a "chicken before the egg"
argument, claiming nobody would be able to pass a test because they
couldn't get experience to pass the test. Of course, Cummings naturally
fails to acknowledge that popular proposals in mode-based testing calls
for an "entry level" license with a wide-range of operating privleges
with limited bandwidth and limited power, to allow people to get
familiar with the modes they intend to operate.

190. Re: Non-mag mount scanner aerial?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-03 00:00:00 UTC
From: Randy <**randyZ@ainsworth.ca**>
Message-ID: <01bc407b$72a062c0$c9f13cc7@alc-pc01>
Source record: 201092

Peter

I ran into the same dilemma when I decided to put a scanner in my car. The neighborhood had been hit with a rash of "Thefts from Auto" and it seemed that the thieves were targeting cars with antennas hanging out all over them. I wanted to mount the scanner in the car and also mount an antenna in such a way that it wouldn't be obvious. Here is what I did:

First of all, my car is a sedan - 96 Honda Civic Si Coupe. I had all three rear windows tinted and then went to Radio Shack and purchased a female BNC chassis mount connector. I drilled a hole in the rear deck, right beside the child seat anchor and mounted the BNC chassis connector there. I ran the coax thru the trunk and under the carpet to where I had concealed the scanner. This worked GREAT. I was able to use the antennas from my handheld scanner in my car. I didn't have to worry about someone bumping it when they rode in the backseat because the antenna is flexible. If I wanted a little more range, I attached the telescopic BNC antenna. The metal of the rear deck acts as a ground plane and the reception was good. This also keeps the antenna out of the elements and you don't have to worry about knocking it off when your sweeping two feet of snow off of your car.

Hope this helps.

For a while he had a store in Castro Valley, California called "Combat
Arms" selling assault weapons. This lasted, I believe, until
California passed their assault weapons ban.

The last I heard, he was attending a law school in Indianaplois and a
PhD program in Public Policy in Oregon.

Just thought I would say that I agree with you on much of your arguments. But don't be too hard on someone who has a mental block about the code. One of the most frustrating things I have done as a VE is try to give the test to the fiancee of a ham friend. She is disabled to the extent that she had, at that time, epilepsy. I knew she knew the answers but she just couldn't calm down enough to TEST.

So, some are luckier than others, and with the current system, no body should be left out completely!

So what you're advocating is a double standard. You're saying it's OK for a college to decide on it's own ciriculum, but not the government when it comes to granting a license.

>The role of government testing is NOT to establish a work
>ethic, sense of commitment or any other subjective quality
>in an amateur. The role of government testing must be limited
>t testing for a minimum set of qualifications to allow a person

Your whole post was very well put. My beef is that morse code is the ONLY
MODE test to get an HF license/upgrade. They don't make you do:
Phone, packet, RTTY, Amtor, G-TOR, SSTV but they make you do code. It is
rediculous and outdated now and should be dropped. It's not a fliter and
doesn't make me a "better" amateur radio operator. What makes people better
operators is KNOWLEDGE, not morse code. It's only a matter of time and it will
be dropped. I think the QST "survey" was full of fecal matter personally.

When AirInc transmits selective-call tones to page to an aircraft I've noticed they do inject a carrier for the duration of the tones, then return to carrier-free SSB to communicate with the aircraft. I suspect that carrier is necessary for the receiving aircraft's radio to lock-on to so the tones will be properly decoded.

Message-ID: <3342D977.5A7D@sp2.power.uni-essen.de>
Source record: 201128

Dear Members,

some time ago I found a German weather-radiosonde for air-borne (baloon) measurements, Type E076. I could reactivate it because of only minor damages.

Technical details I found out:

Weight: 0.450 Kp incl. styropor case, without batt.
Power supply: 12 Volt Batt., switched by a reed contact
Oscilator Freq.: 100.95 Mhz
Output: <0.25 Watt
Modulation: FM
Sensors: Air-pressure, -temp., -humidity
Data transmission: 3 variable NF tone frequency bands, one for each sensor

The equipment I use:
-Different short wave receivers
-Ham-Com Ver. 3.0 plus Ham-Com demodulator on RS 232
-JV-Fax Ver. 7.0
-PC Weatherfax prof.
-Packetmon. 3.1
-self-written or adapted programs in TURBO-Pascal Ver. 6 & up

My questions:
Who knows more about the details of receiving and decoding the transmitted data?
Does someone have TURBO-Pascal procedures (source code) for parallel analyzing multiple frequencies?
Can someone give me a hint or a link on this subject?

Thanks to you all in advance,

Dr. Bunk

All aircraft in military service of the United States, including pseudo
services like the Coast Guard, (to all you other less arrogant Coasties
that insult was for Jeff alone) use AM UHF for ATC and inroute direct
control. SSB is used over ocean and for ops communications added to
which the airbore communication specialist usually handles the SSB coms
as it entails alot more than tuning a BFO. Since you are ignorant of
these things one must assume you served on a ship or,shudder, ashore.

>
>Come to think of it - transcontinental planes already use (HF) SSB to
give
>position reports to ground stations.

Yep they sure do but when they are in positive control they use AM VHF for civilian and UHF for military. They even used CW at one time but dropped it as inefficient and cumbersome, kind of like a lot of the new hams. It went out with the sextant for position determination. Why the sudden prolific insults Jeff, between semesters?

If you have no interest in developing amateur radio's most basic skill,
you have no interest in becomming a radio amateur.

:>Catch a clue people, there are already no-license hi-tech digital
:>hand-held radios, they are called cell phones. They are convenient,
:>available, and relatively cheap for large numbers of people.

That's right, there is a REASON it's called cellular telephone and not
amateur radio ... any moron can buy/lease a cellphone there is no reason
for any license/competency testing.

:>There is already no-license hi-tech packet at data rates substantially
:>higher than the vast majority of packet radio, its called "the Internet".

Correct again, Sherlock. It's the internet, primarily wireline based
and
NOT amateur radio. One need only look at much of the activity on "the
net" and know that it takes no talent, knowlege, or ability ... just a
checkbook to get on the net. Anyone believe that The Amateur Radio
Service should become just another checkbook hobby?

>Mike Ruther aa7qa

Only problem is that the requirement for a 2nd or 1st class RadioTelegraph license is no longer. There is no longer a mandatory 500 KHz watch as there once was. The coast guard also has mostly and may have even entirely stopped monitoring for morse distress signals (If I understand correctly, it's only monitoring in the Pacific ocean if it's monitoring at all), and I wouldn't depend on getting a great job as a radio officer on any U.S. flagged ship in the near future. Satellite communications, and vhf seem to have filled the need once filled by radio officers receiving and sending communications with cw. -art clemons-

> produces the electicity to listen to the AM station.

Aloha,

The power to produce the "electricity" to listen to AM stations,
comes via the power of the station to which
you want to listen. There is no "local" power" source in
the simple crystal rcv'r. The crystal detector passes only the
rf energy from the transmitting station on one side of the
rf cycle--either the postive going, or negative going half
of the cycle, depending upon the orientation of the crystal
in the rig, it doesn't matter which way it is. There is usually,
a capacitor in the crystal rcv'r, whose job it is, to store up
successive pulses of the current from the transmitting
station. This action, in actual effect, down converts the
recv'd energy from rf to the audio frequencey spectrun,
because the time constant of the crystal and the capacitor
are chosen to be at audio frequencies, not at rf. When
the capacitor discharges thru your earphones (unless you
have connected up an audio amplifier to the set up) and
this current flowing thru the magnetic coils in your head
set, modulated at audio frequencies, is what you hear.

So all the power is provided by the transmitter; there is
no gain or selectivity to eliminate noise energy in the
typical crystal rcv'r. So you must be rather near the
transmitting station to hear the signal. That is what was
so much fun back in the early part of the century,
from how far away could a transmitter be heard at
home via a crystal rcv'r?

Hope this helps.

221. International Telegraph Alphabets

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-03 00:00:00 UTC
From: seward@netcom.ca
Message-ID: <3343362f.8521503@nntp.netcruiser>
Source record: 201140
Cross-posted to: alt.folklore.computers,comp.protocols.misc,rec.radio.amateur.misc

International Telegraph Alphabet No. 5 is the international version of ASCII;

International Telegraph Alphabet No. 1 was a version of Emile Baudot's original 5-unit code, the one that included a 'letters space' and a 'figures space'. (I've seen a web site that incorrectly claims that International Morse, formerly Continental Morse, was ITA 1.)

International Telegraph Alphabet No. 2 is what is most commonly called Baudot; it is the 5-level code derived from the Murray code.

ITA 3 and ITA 4 are obscure, but they are both derived from ITA 2, as are a couple of other codes.

The final code, ten bits long, was used in Britain, but I don't remember its name. All the codes, except for CCIR 476, are shown in order of transmission; CCIR 476 is shown the other way around, being assumed to be sent LSB first as is ASCII.

alpha (all 0) 000000 0101001 0001111
beta (all 1) 111111 0101100 0110011
SYNC 110011
repetition 0110100 1100110

Unlike ITA 3, CCIR 476 has a pattern that relates it to ITA 2: except for the letters B and U, whose natural codes are used for alpha and beta, those ITA 2 characters which have 4, 3, or 2 one bits set are represented by 0x0, 0x1, and 1x1 respectively, where x is the five bits of the ITA 2 character; and 1nnnnn0 represents the characters that don't fit into this range, with again exactly 3 of the n bits set. Note that ITA 3 is a 3 of 7 code, while CCIR 476 is a 4 of 7 code.

Perhaps this is why the newer CCIR 476 is the one US radio amateurs are permitted to use, and do use for AMTOR, while the older ITA 3 was used for ARQ purposes originally. But it's odd to see a new code developed to fill exactly the same purpose as an older code already accepted as an international standard.

222. What was "incentive licensing"?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-03 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseE81qoM.74w@netcom.com>
Source record: 201141

Have heard about something called "incentive licensing", and it was started in the early 1960's? Also have heard it soundly condemmed as ruining ham radio.

I got my license in 1976, and then there was a code only license (novice, 2 years non-renewable), tech (which had NO novice HF freqs a few years before), general, advanced and extra (pretty much like today).

Are all these different grades of licenses a product of "incentive licensing"? What was the point?

A few years earlier, in New Jersey, an FCC person "Dave P" discouraged my getting a tech license. "VHF is not REAL amateur radio". "HF is where the real ham operations are done". But I didn't want the code only license (movice). "All Code" guess you could call it.

>just pass on the college classes that I think are bullshit and that I'll
>never use and get my degree anyway? Naw.

College is a choice you can change. You can go to
different schools to avoid some types of required classes.
In any case, this is a government licensing requirement,
not a private entity. Simply put, the government has
an obligation to ONLY have relavent test requirements.
You don't find questions on the theory test on
vacuum tubes anymore because times have changed.
That is the position morse should be in....dropped as
a requirement because it is absolutely of no importance
to contemporary communications on HF. Use it all
you want, but the government has no role to play in
fostering continued use of a mode which has only
entertainment/enjoyment value.

>I don't think it's so much a barrier they are trying to put up, or a
>"technically unqualified" element they are trying to keep out. CW takes
>a *little* effort and time to learn and I think people in this "instant
>gratification" period we live in want to talk on the radio NOW.

The role of government testing is NOT to establish a work
ethic, sense of commitment or any other subjective quality
in an amateur. The role of government testing must be limited
t testing for a minimum set of qualifications to allow a person
to operate in the amateur bands.

>I think learning CW shows a minimum level of committment and
>perseverance that are good qualities for people in the hobby to have.
>This minimum level of commitment and perseverence I am referring to
>transcends all levels of hierarchy. Poor people, rich people,
>handicapped people, yes, ALL people can qualify.

See the above again.

>I am not against "no-code"licensing nor do I look down at no-code hams,
>I just think I understand why learning morse code has been a requirement
>and I don't think it was a bad idea.

You don't think it was a bad idea, yet you admit you don't
understand why it is a requirement. Does that make any sense at all?

228. Re: Question about aircraft using AM instead of FM

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-03 00:00:00 UTC
From: holford@cnwl.igs.net.nospam
Message-ID: <5hv9e3ibc1@nntp.igs.net>
Source record: 201147

Well, let's see:

When aviation communications changed world wide from AM to SSB
it was not considered advisable to do the same at VHF.

During the same general time frame the military use of UHF was
expanding rapidly and they also stayed on AM. On the same band
(225 - 400 MHz) they also use SSB and FM, but not for the same
type of communications.

Therefore, one assumes, there are valid reasons for staying with
AM. The complexity of SSB at higher frequencies is obviously one,
the presence of a carrier for DF is another, ability to detect an
attempt to communicate by a second aircraft is also valid.

As ex military aircrew and military/civil Air Traffic Controller
I can vouch for the fact that hearing a second, weaker, signal
acknowledge the same clearance is a definite plus for AM.

HF SSB is indeed widely used, but the communications on HF do
not normally have the immediate effect on safety of flight that
the VHF/UHF ones do. Usually on HF the pilot is talking to the
controller through an intermidiate radio operator, who is often
in a different location from the ATC folks. VHF/UHF is where the
DCPC (Direct Controller Pilot Communications) happen.

Exactly. There *is* no logic in the above nonsense; only an appeal to
emotion. Even if there were logic in it, it'd be completely irrelevant
to the discussion of whether or not CW should be on a ham test.

>hand you cannot see the logic - or so stubborn you will not admit it

A N N O U N C I N G

NEW Version 1.1

SWARM - Solar Warning and Realtime Monitor

NOW A POWER HOUSE FOR RADIO COMMUNICATORS!

We are proud to announce the release of Version 1.1 of SWARM, our Solar Warning And Realtime Monitor software for Windows 95 computer systems!

Version 1.1 contains some substantial enhancements, including what many radio communicators might consider the HOLY GRAIL: NEAR-REALTIME Full Ionospheric Data Aquisition and Display from all reporting WORLD-WIDE ionospheric observatories!

You can now plot and track critical F2-layer ionospheric frequencies, M-factors, Maximum Usable Frequencies and Total Electron Content for all of the reporting ionospheric observatories around the world! Data is obtained from direct ionospheric soundings and plotted on-screen within minutes of many of the observations! The plots produced by SWARM are therefore THE MOST ACCURATE IN THE WORLD for determining CURRENT radio propagation conditions. Watch conditions change on-screen, AS THEY HAPPEN. Determine the best frequencies to use based on CURRENT conditions. Observe and exploit unusual band-openings resulting from unpredictable enhancements in the strength of the F2-layer! Monitor world-wide propagation conditions during geomagnetic storm periods and make judicious use of frequencies during such times of depressed propagation.

SWARM also includes the new and unique ability to retrieve the latest SOLAR IMAGES and MOVIES, and MUCH more! You can even use SWARM to obtain the latest ultraviolet space-based images of AURORAL ACTIVITY from the POLAR Spacecraft!

These and MANY other powerful features including SWARM's unprecedented ability to obtain and display a true plethora of REAL-TIME solar and space environment information, provides amateurs and professional forecasters alike with an incredible number of tools for analyzing and predicting space weather, ionospheric weather, solar activity and even auroral activity!

Complete details, sample screen captured images and pricing information can be found at our Web page: http://solar.uleth.ca/solar/www/swarm.html

I'm using a Rad Shack unit which clips to the window glass in my door
and uses the flexible antenna outside (bnc mount) works much better
than rubber duck in car, but less effective than actual mag mount
unit. Good compromise - I live in high crime area - they'll take the
mag mount off your car while stopped at a light!

Whatever happened to Dick Bash anyway? I remember him passing flyers out at Dayton one year that said he was looking for authors to publish for. This was something apart from his "Final Exam" books.
So whatever became of his publishing "empire?"

DRAO 10.7 cm Solar Flux at 18Z, 20Z, 22Z: 79.3, 80.5, 81.3 sfu.

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 8026 (S24W02) produced two C-class flares and numerous B-class events during the reporting period. As many as 14 new spots have formed since yesterday, with the region now displaying two distinct plage fields (northeast and southwest) in a 29 spot 'EAI' beta-gamma configuration. The northeast plage field contains an active arch filament system and dark surge on the disk. New Region 8027 (S30E77), the return of old Region 8021, a 3 spot 'CAO' beta group, was numbered today as it rotated around the east limb.

Solar activity forecast: solar activity is expected to remain very low to low, with a continued chance for isolated M-class events from Region 8026 for the next three days.

The geomagnetic field has been mostly quiet for the past 24 hours, except for an isolated period of unsettled conditions during the interval 02/0000-0600Z. The greater than 2 MeV electrons were in the moderate to high range.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled for the next 24 hours. Activity is then expected to increase to mostly active, with the probability of isolated periods of minor storming, on days two and three in response to an earth-directed CME detected by SOHO/EIT in association with the M1/1B flare from Region 8026 at 01/1400Z.

STD: Users of our SWARM Software should make certain appropriate warnings are enabled to warn of the arrival of this disturbance. All A and K-index warnings should be enabled, as well as warnings for solar wind velocities exceeding 500 km/sec and solar interplanetary magnetic field Bz values becoming more negative than -5 nT. Radio communicators should pay close attention to the critical F2-layer frequencies for sudden periods of enhanced critical frequencies (and hence enhanced maximum usable frequencies). Enhancements will be possible during the first few hours of the disturbances arrival. Thereafter, expect the trend in critical F2-layer frequencies to become negative and fall below-normal, resulting in reduced MUFs for up to about 48 hours. Aurora hunters should keep a close eye on geomagnetic A and K indices and watch particularly for hourly K-indices of 5 or more for stations nearest to your location. Guidance for satellite operators is included in our Potential Satellite Anomaly Warning, also being issued at the present time.

Event probabilities 03 apr-05 apr

Class M 25/20/15

Minor Storm 10/25/25
Major-Severe Storm 01/10/10

B. High Latitudes
Active 20/60/60
Minor Storm 10/25/25
Major-Severe Storm 01/10/10

HF propagation conditions were normal over all regions.
Near-normal propagation is expected to continue over the next
24 hours. On 04 and 05 April, propagation is expected to
become degraded due to effects of the above-mentioned coronal
mass ejection. The first several hours following the arrival
of the CME could see periods of enhanced propagation, followed
by a general negative trend. High and polar latitude
night-sector paths are expected to be hardest hit, with periods
of moderate signal degradation possible. This disturbance, if
it arrives, should keep propagation below-normal levels until
about 06 April.

(Users of SWARM are encouraged to monitor these propagation
changes directly and in near-realtime. The SWARM software can be
obtained quickly from: http://solar.uleth.ca/solar/www/swarm.html)

OBSERVED SOLAR WIND SWE PARAMETERS FROM 1234 TO 1514 UTC ON 02 APR 97

Maximum Solar Wind Velocity: 500.5 km/sec at 135343 UTC.
Minimum Solar Wind Velocity: 463.6 km/sec at 130441 UTC.
Average Solar Wind Velocity: 485.8 km/sec.

Maximum Solar Wind Density: 3.7 p/cm^3 at 133241 UTC.
Minimum Solar Wind Density: 2.5 p/cm^3 at 143312 UTC.
Average Solar Wind Density: 3.1 p/cm^3.

Maximum Thermal Velocity: 52.1 at 143536 UTC.
Minimum Thermal Velocity: 31.3 at 131617 UTC.
Average Thermal Velocity: 42.1.

OBSERVED SOLAR WIND MFI PARAMETERS FROM 1226 TO 1514 UTC ON 02 APR 97

Maximum Solar Wind Bt: 5.9 nT at 123554 UTC.
Minimum Solar Wind Bt: 4.6 nT at 145902 UTC.
Average Solar Wind Bt: 5.2 nT.

Maximum Solar Wind Bx: 5.2 nT at 132630 UTC.
Minimum Solar Wind Bx: -5.5 nT at 131546 UTC.
Average Solar Wind Bx: 4.1 nT.

Maximum Solar Wind By: -0.8 nT at 134758 UTC.

NOTES: "V" = Very High Fluence, "H" = High Fluence, etc, " " = No Data,
"!" = Solar rotational boundary periods from current date. Electron
fluence is flux integrated over time in units of cm^-2 day^-1 sr^-1 as
measured by GOES-9. Fluence values that are moderate or higher have
been correlated with satellite anomalies. Sustained high to very high
fluence has been correlated with serious malfunctions.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

237. Apology for AMSAT Slam

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-03 00:00:00 UTC
From: Al Gerheim <gerheim@sonalysts.com>
Message-ID: <3343A6CD.1B2C@sonalysts.com>
Source record: 201156

I'm sorry if I've offended anyone with my comment that AMSAT satellites generally require expensive ground stations. I'm on a severely limited budget. The "major components" in my HF station are all more than 15 years old. Yet I can work some of the RS birds with equipment not dedicated to satellite use, and with fixed antennas. My 2-meter uplink consists of a "broken" kenwood all-mode rig that only works on receive and CW transmit at 1 watt, plus my 20 watt brick and a ground plane antenna. ...before people tell my to fix the all-mode rig, it tasted an HF KW due to some bad wiring, and Kenwood won't touch it.

What I really wanted to know was how can I contribute to the Russian Amateur Satellite Program.

Ever mindful of Burt's bad example...

Hi People!

By the time you read this I`ll be getting ready for the Shannon River Run. This is an annual event which takes place on the Shannon and Erne waterways in Ireland.

There will be 9 boats in total active during the weekend and an award will be available for working any six. The exchange will mention which boat each call sign is calling from. The event runs from Friday 4th till Sunday 6th - so please give us a call!!

For more info on up and comming radio events in N. Ireland have a look at the events calendar in

http://www.geocities.com/SiliconValley/Park/7260

Looking forward to lots of activity (even some on the radio!!)

73 De Keith GI0SSA.

COLORADO ATV/GPS PACKET BALLOON LAUNCH
EOSS-29

Region: Central Colorado

Date/Time: Saturday, April 12 / 8:00 AM Mountain Time,
12:00 UTC

Location: Pike's Peak RC Club airport located east
of Falcon, CO (Falcon itself located
about 15 miles northeast of Colorado Springs;
please see EOSS website for detailed map
graphic)

Other states where Kansas, Nebraska, Wyoming, Utah, Arizona,
the signals will New Mexico, northern Texas, and western
reach easily: Oklahoma.

Site Coordinates: for initial antenna heading -
38 degrees 57' 17.65" North Latitude
104 degrees 30' 4.43" West Long.

ATV: EOSS Shuttle Video - 426.25 MHz AM NTSC
video (1 watt)

Beacon: 144.34 MHz Morse ID audio on FM
(periodic; frequency shared with packet
telemetry)

Telemetry: 144.34 MHz FM (1 Watt output) - AX.25, 1200
baud mostly plain english text; includes APRS
position data string

HF Net: 7.235 MHz

VHF nets: Preflight Foxhunter Net 8:00 PM the
preceding night, 147.225 MHz, Colorado
Repeater Association

Launch Site at about launch time
146.55 MHz simplex

Foxhunters: 448.45 MHz Pikes Peak FM Association Repeater
146.58 MHz simplex field frequency

Actually you can see "junk" left behind. A reflector was left on an
earlier mission that has intended for use in a laser range finding
experiment. A very accuate distance measurement (+/- 10 cm with
attmospheric correction)) can be obtained by detecting the return light
from a strong earth bound laser and counting the number of wavelengths.
Minute fluctuations can be measured but usually the variations are
dramatic in earth to moon distance. These measurements have been tracked
for years using this system.

As an Extra Class licensee, I guess no one should or is accusing me of "whining" about the Morse requirement, seeing as how I can copy 25 WPM any time, anywhere.

However, I believe that the discussions about eliminating the Morse Code requirement have actually been very valuable. Even QST, the most conservative of publications, has begun to debate the topic. And I believe that this debate is a spillover from the discussions that have taken place right here on the Internet (although generally in policy, rather than here on misc.)

It baffles me why you believe that these discussions are needless, or that they reflect poorly on our hobby. I personally think that lively discussions about important topics, and possible changes, are a healthy thing, and a sign of vitality. The alternative would be, I guess, for all of us to just keep quiet and let the powers-that-be (whoever they are) run the show with no input from regular folks. That is not desireable, and that is not America.

>

I think the Herman's notion that operations testing is an easy fix is much easier said than done. I would hope that he can respond to some of my concerns as follows:

It goes without saying that testing is undertaken to confirm that the individual has the necessary skill or knowledge of that subject. However, since the government's legitimate concern is the mititigation of interference is among the users of the radio frequency spectrum, Herman has failed to show that such testing would be of benefit to amateur operation in general. Since Morse code testing has utterly failed to do so, what justifies Herman's proposal to expand operational testing when Morse code has utterly failed produce the desired results? (There is no doubt that skills testing is important in the priviledges that are granted by the government, Herman has failed to show that such testing will solve certain problems in the context of amateur radio certification.) I can only conclude that Herman is unable to justify Morse code testing; yet, attempts to legitimize its existance by calling for the testing of the use of all modes. Since operational testing is useless in one mode, there is little chance that operational testing in all modes would be any less irrelevant.

Be that as it may, I would foresee a number of hurdles that the candidate would have to overcome. For example, let us presume that the operational testing for radiotelephone operation would be to communicate in that mode. Certainly, it would be odd to test an individual capability in such a skill having never been exposed to the operation of a radio. It only follows that the individual will have to practise such skills; but, the is problematical because the individual is prohibited from operating an amateur station without a licence. Thus, each prospective amateur would have to have an "elmer" to coach the individual along while practising these skills on air. What sort of accomodations would Herman recommend for those individuals who are unable to find and "elmer" for whatever reason? For that matter, I would imagine the Herman would not qualify as an "elmer", considering his disdain for digital communications (surely digital communications would be designated

as "popular" by Herman....)

Another notion that I find questionable in Herman's proposal is that operational testing is limited to only the "popular" mode. Would Herman be kind enough to inform us as to what criteria would determine which mode is "popular" and which is "unpopular"? What justifies this distinction? Is that not, like Morse code testing is now, arbitrary in nature? Would it not make more sense to test one's capabilities on those modes which are most likely to cause interference rather than on the shallow notion of its popularity? From a technical point of view, such testing is more likely for the "unpopular" modes because those are the ones that most likely are used by the real experimenters. But this points out that the "popularity" of a mode, with respect to others is irrelevant to the issue to the government's legitimate interests in managing the radio frequency spectrum. For example, as Herman has said many times, CW is the second most popular mode on the HF spectrum. However, he has never explained how the knowledge of Morse code is relative to mitigating interfering with other radio frequency spectrum users. What is seemingly forgotten by Herman is that it is the spectral purity of the emission that is of importance whereas the encoding scheme is insignifcant in so far as the legitimate concerns of the government.

Another issue that Herman fails to address is the concern of ensuring that the testing is objective, and removing, to the greatest extent possible, the subjectivity of the tester. What has to be considered is that operational testing doesn't devolve to a "pro forma" exercise and no one would fail; yet, there should be a definite criteria to measure the candidates capabilities while at the same time, extracting the tester's personal bias. The former is more likely, whereas the latter is unattainable. But anyways, Herman avoids the core question - What is to be gained by operational testing? Since there is nothing gained with Morse code testing, in so far as the government is concerned, why must it be compounded by the addition of operational testing of other modes which also irrelevant to the government's concerns? The corollary to this question is if the concern is the bad behaviour of certain individuals on the bands, Morse code testing was ineffective, what make Herman believe that expanding such operational testing would be any more effective?

I would hope that Herman would be kind enough to address these concerns.

I suggest that the new ham's unhappiness comes from
the tenor of much of the discussion here; not the
real content of the arguments (which is often
very dilute). So many of the postings are full of
nvective, name calling, insults to one another and
rancor!

I am sure that tenor, not the valid discussion is what
bothers the new ham.

By the way, I am impressed with the few papers now
posted on the new no-code web site; they are rational,
coherent, and well written. Clear and concise logic
there. Try reading and commenting on some of them.

Robert Casey wrote:

>
> Are all these different grades of licenses a product of "incentive
> licensing"? What was the point?
>

No, all the current license grades (except the "codeless" Technician) existed prior to what is commonly called "incentive licensing" which was adopted by the FCC in 1968. The so-called "point" of incentives was the idea of more privileges in exchange for passing more difficult written (and for some licenses faster Morse) examinations.

Actually the history of incentive licensing goes way back into the 1920's.

From 1912 until 1923 there were two grades (Amateur First and Amateur Second) of license with identical privileges. "First" guys tested at an FCC test, and "Second" guys simply certified they met the qualifications, but could not go to an examination because of distance or disability. Morse testing was at 5WPM until 1919 when it went to 10WPM. The test was on rules, regulations, adjustment and operation of equipment. There was no test on theory, per se. During that period there was no incentive to upgrade.

In 1923 came the first incentive license, named "Amateur Extra First Grade". This grade, which required 2 years in a lower grade, 20WPM code, and a theory test, gave the licensee a distinctive call sign and additional wavelengths above 200Meters. In 1929 these licensees also got new phone privileges on 20 meters, and in 1932 they got phone privileges on 75 meters.

In 1933 all three grades were renamed and would remain basically the same for 20 years.

Amateur Extra First Grade became Class A. It retained the harder theory test, and also kept the 20 and 75 meter phone bands, not available to other classes.

Amateur First grade became Class B, and what used to be Amateur Second grade became Class C. Class C now required a mail order test given by volunteers. Otherwise it was exactly the same as Class B. These two class did not have phone privileges on 20 or 80 meters, so there was a big incentive to upgrade to Class A.

In 1951 there was a major change in licensing. We went from 3 license classes to 6.

Class A became Advanced.
Class B became General.
Class C became Conditional.

A new class called Amateur Extra was added. Note that this is NOT the same as the previous "Amateur Extra First Grade" which was the "father" of the current "Advanced" class.

All four of these classes had identical privileges. Conditional was simply a mail order version of General for people a long way from the FCC. Tests were progressively more difficult as you moved up the ladder from General, including 20WPM at Extra, but there was no particular reason to upgrade, other than a feeling of accomplishment. Thus, in 1953 we see the end of incentive licensing until it was reintroduced in 1968. Between 1954 and 1967 there were no new Advanced licenses issued, although current holders could renew.

Also in 1951 came two other new classes, Technician and Novice. The Technician took the General written test and a 5WPM Morse test. They had privileges above 220mhz (no 2 or 6 meters, and no HF).

The Novice class initially had CW privileges on 80 meters and 11 meters, and voice on 2 meters. This license had a term of one year and could not be renewed, but you could simultaneously hold both a Novice and a Technician license. Many people did this, and eventually upgraded to General by simply taking the 13WPM Morse test, so you can see that below General there still was a sort of incentive system.

In 1968 we saw the return of incentive licensing on HF, so except for a brief 15-year period, we have had incentive licensing for 73 years from 1923 until the present.

Why is everybody so obsessed with speed and convinience? This is only a hobby. Do people quit fishing because they know they can buy fish at the store? The way I understand it, ham radio is not so you can contact friends with the utmost speed. It is so people can have a fun hobby meeting new people. Cell phones and the Internet are not comparable to amateur radio because they are mainly commercial ventures. Every man to his own, and why does it matter if someone enjoys radio as it is and is not always at the absolute extreme cutting edge of technology.

Annoyed with this constant bickering,

Chris

: As a general class amateur I have taken and passed the 13 wpm cw test.
: However, if my radio quit working on the cw bands I would never know it.
: Why was I required to pass a cw test knowing that I did not like it or
: would ever use it?
: I do not know the answer. I did it because I wanted the general class
: ticket.

VERY GOOD! You did it because: You wanted the ticket! That IS the reason that the code should NOT die. I have heard lots of people say that the code is no longer a *critical* part of amateur radio OPERATION, and hence it should no longer be required as a test element. The operation part may be correct, but a critical part of LICENSING it must continue to be. In all of the posts of people who seek to abolish CW testing, I have yet to hear a proposal for replacing it. WHAT?! REPLACE IT?! WE JUST WANT IT GONE!! Well, the trouble is that, without the code, there is simply no challenge to obtaining a ham ticket. None whatsoever. I'm sure that even the most hard-core CW-test-haters would agree: If everybody could get an Extra ticket on their first test date, the airwaves would be teaming with newbies, many of whom would lack the learned respect for their hobby. THIS IS NOT TO SAY that those who opt NOT to upgrade lack this respect, or are in some way "newbies" even after years of VHF-only operation. They simply DON'T WANT HF enough to have it. BAR NONE.

The "incentive licensing" scheme is ENTIRELY HELD UP by CW testing. Do we really want to hastily destroy this necessary foundation of Ham radio without considering some way to keep it going? I received my Technician No-Code license in March of '93, when I was 17 years old, and was "Temporary AE" by December of the same year. If CW testing had not existed, the only thing that would have prevented me from going from Tech to Extra in one month would have been the fact that there was only one ARRL testing session per month. I'm 21 years old now (as of January), and head up Washington State University's "Rho Epsilon Amateur Radio Fraternity." In the past year, I have helped ten members get their 5 WPM, and 2 get their 13. Nobody took more that one week to learn 5, and the two who got their 13 did so because they took my advice and tried 5 WPM on-the-air.

My point after all this: I think CW is great, and I enjoy using it on-the-air, too. There are many who don't enjoy CW, however, and this is OK. I don't believe, however, that the so-called No-Code movement had considered the impact that removing the code testing would have on incentive licensing. It would be devastating. In my own humble opinion, many of those who call themselves "No-Code" activists are simply along for the ride -- selfishly awaiting the day when they can rush to the local W5YI session, take 3 theory elements, and walk out an Extra. You can all claim otherwise, but that's

what I'll believe until I see a valid attempt to replace the brace that CW has built for incentinve licensing -- or does anybody care what happens to our fine hobby?

I do. --... ...--

You know, there is a source of postcard stock guaranteed to meet postal standards for mailing, and can be mailed in the U.S. easily and legally. Now, they do cost twenty cents a piece, but that includes postage for mailing in the United States, and additional postage can be easily added for foreign mailings. The United States Post Office sells postcards for 20 cents each with the postage already on. One can even inquire and add postage for mailing to other countries, or look it up on the web. Incidentally, the cost for Canada differs from the rest of the world. -art clemons-

I have a layout in my log database which formats log information into a QSL card and prints onto card stock. By turning the card over after it prints the QSO data, I print a message and the address (pulled in from the callbook), again right from the database, on the backside. It turns out just like a post card (after trimming).

I really like the polished look of offset press QSLs, but this is a pretty slick system and my QSLs are 'homebrewed'.

So what is wrong with CW? Gosh I hate when people start carping about the code. It is a legitimate mode of communication even in the 21st century. If you don't like CW, don't use that mode.

Having been a VE for some time. I believe that people motivated to become hams can learn to copy 13 wpm enough to become a general class ham. IT really is NOT all that hard!

: Anyway, I'd like to hear from anyone who can either tell me of an
: alternative aerial or can give mt the name and address/phone
: number/e-mail address of a company who make such aerials.

Two options:
1 = Antenna Specialists trunk-lip mount, MONR52, $41.99 plus shipping
2 = Buy #1 and then go to a local radio shop (NOT Radio SHACK), one that installs radios in cars, and buy an "L" bracket and cable assembly (bring the antenna with you to show them what size hole/base you need). The "L" bracket mounts in the gap along either the hood or trunk; police cars usually have this type of antenna. The Antenna Specialists scanner antenna will screw into an "L" bracket base.

I have 2 of these brackets on the front of my S-10 Blazer.

>In this situation SSB would be more beneficial.
>
>Jeff KH2PZ / KH6

In the unlikely event that two AM transmitters were *exactly* on the
same frequency, including doppler effects, the result would be similar
to SSB, with both stations audible and understandable, though one could
be much louder than the other. But the odds of that happening are somewhere
between slim and none. Getting two independent VHF transmitters netted to
exactly the same frequency is a difficult thing to do deliberately, and
unlikely to happen by chance, especially when you have to allow for
differential doppler.

DSBWC AM does retain an advantage for RDF over SSB, it doesn't suffer from
the capture effect of FM (the FM capture effect is ordinarily considered
an advantage, but it isn't one for ATC purposes), and since the required
signal range is moderate, and typically line of sight, there is little
reason to change away from AM, which is entirely adequate to the task.

It should be noted that *long range* aircraft comms *are* done using
SSB (on HF). That's for the same reason amateurs use SSB on HF, the
effective 8-fold power advantage gained by SSB over ordinary DSBWC AM,
due to discarding the dead weight carrier (4x improvenent), dumping one
redundant sideband (2x improvement), and halving the required receiver
bandwidth (2x improvement). But that doesn't matter for LOS VHF signals.

Last night I turned on the Art Bell radio show. Bell is also a Ham. This was about 2:30AM so I was half asleep. He was talking to some Ham big wheel.....I didn't get his name. What this guy was saying was that Ham radio needs a purpose. He claims Ham Radio is no longer needed and the bands are too valuable. Meaning congress wants to sell them off. I think this may have been the editor for 73 Magazine, not sure. Anyone have anymore details.

There's a 900 MHz amateur band! I shouldn't be surprised...those new cordless phones probably only have a tiny slice of the bandwidth up there...and (some of them?) use spread spectrum, so they won't even bother anyone (?).

Tom, you are a piece of work on this Morse Code thing, old chum. My dear fellow, are you truly unable to see how lame the above justification for Morse Code testing is? In other words, to enable folks in the condition of Captain Christopher Pike on Star Trek, wheelchair bound, with no motor skills other than the ability to beep a light, to communicate. Pathetically lame, IMO.

One cool thing about Morse Code is that I can communicate by farting, after having dinner at a Mexican restaurant. Hey, I have it! Let's make everyone pass a test on Morse so that we can all communicate this way!

OK, OK, sorry for being gross...

I've got a 902 band voice repeater operating here in the SF bay area. I've converted a number of commerical band Motorola Spectra radios to operate quite nicely. It's quite a nice band - no users so we have it all to ourselves. Other services sharing the band have had no impact on our operations. BTW 440 is a shared band also.

Not to defend incentive licensing, but except for a brief period
of 15 years (53-68), incentive licensing has been part of the
US amateur radio structure since about 1923. Did the numbers
start to decline in 1923? Just wondering. (Maybe Roger knows...
he was here before incentive licensing.)

: Learning CW is a "large barrier"? Please!
: The truth is that people don't want to learn CW because it takes a
: little time and effort and they don't want to have to do it. I know that
<snip>
: "technically unqualified" element they are trying to keep out. CW takes
: a *little* effort and time to learn and I think people in this "instant
: gratification" period we live in want to talk on the radio NOW.
: I think learning CW shows a minimum level of committment and
: perseverance that are good qualities for people in the hobby to have.
: I am not against "no-code"licensing nor do I look down at no-code hams,
: I just think I understand why learning morse code has been a requirement
: and I don't think it was a bad idea.

: Greg WG8N

Bravo!!!!! At least there's somebody else in here who looks at the big picture. The reason for CW testing IS NOT SIMPLY BECAUSE THE FCC OR ANYBODY ELSE THINKS CW IS COOL. IT IS BECAUSE CW DEMONSTRATES A LEVEL OF COMMITMENT TO ONE'S HOBBY THAT THE WRITTEN ELEMENTS CAN NOT! Why it this so difficult to understand?!?!?!? CW IS NOT A BIG DEAL!!!! If all you do is sit around all day whining about hating CW, you are, in my mind, not worthy of a callsign. If somebody can find a way to similarly test one's effort and commitment to their licensing goals, JUST SAY IT! It doesn't take two brain cells to figure out that you can't just throw CW testing away without REPLACING IT WITH SOMETHING ELSE. When I joined the hobby in '93, I didn't like the idea of CW, but I soon learned to respect it. When I committed to upgrading my Tech No-Code license, I committed myself to learning CW. It is a well-establish tradition (and no, tradition does not have anything to do with the future), and has great roots in our hobby. If all you do is worry about, then sure... it'll be hell. But once you pass it by, you'll see that the effort was worth it. This series of stages in developing your license is healthy.

BTW: I've never met anybody who couldn't learn 5 WPM in a week!

73's,
Aaron -Ki7QM (email reply to: jah@wsu.edu)

I was recently asked to speak about amateur radio to a local civic club. I will talk about how amateur radio is a method for people to learn about wireless communications and electronics technology and how this learning helps society in times of disaster. I will talk about the wonders of learning to build at least some of one's own equipment and the excitement of talking with people in other locations, etc.

The vast majority of hams represent a fairly sharp group of people no matter what walk of life they come from and I am glad to be part of this special group. If I start feeling too good, however, all I have to do is tune to 3853 KHZ on any given evening and just listen. I don't know how widely heard this activity is, but participants seem to mainly come from the Central and Southeastern U.S. There is always some sort of trouble brewing and it frequently results in deliberate QRM consisting of various noises, music transmissions, CW blizzards containing messages about the sexual proclivities of various individuals, and outbursts of some of the filthiest language you will ever hear. They blast anybody who isn't them and the racket just keeps going night after night without ever resolving anything.

I have read and heard of hams demonstrating amateur radio to a Cub Scout troop or Sunday School class only to stumble across one of these sewage fests.

Imagine how many more frequencies we will get at the next WARC if somebody plays two or three hours worth of 3853 shenanigans to the planning groups as a representation of what amateur radio is.

Is the FCC doing any kind of enforcement at all? They are surely aware of this activity. It is pretty hard to miss and I think it is the worst it has ever been.

Self policing only works when most of the people involved agree to behave. These characters have no intention of behaving except to misbehave. Nothing bad ever happens to them for doing this so they have nothing to fear. Anybody naive enough to say anything to them is hooted out of the universe. The rest of us listen with a mixture of fascination and disgust.

A few high-profile busts and the silences that would follow might do wonders to clear the air.

ITA 3, the 3 of 7 code, was also known as Moore ARQ code. And there are still people using AUTOSPEC, the 10 bit code, I now find...in looking for more information on this sort of thing (I had seen, in one electronics/computer handbook, the 6-bit Thai teletypewriter code as an example, and the Russian 5-bit code with 00000 as a third shift was in a Russian book on computers)...and I also found that one can buy a book about this sort of thing (Radio Data Code Handbook, by Klingenfuss, in Tubingen, Germany) which is (no doubt) quite expensive.

Wrong, of course. ARRL has substantial input regarding the FCC's stewardship of amateur radio in this country. Anyone who reads QST cannot doubt that the discussion that takes place on this forum has had an effect on ARRL. Why do you think they have started addressing the issue. I don't think it is because of the trickle of letters they get to QST.

I have had discussions with one Director and one Vice Director regarding Morse Code testing. These discussions were a consequence of comments made by myself and others on this forum.

Cheerio.

The ARRL Letter
Vol. 16, No. 14
April 4, 1997

----------------------------------
Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

----------------------------------

IN THIS EDITION:

* New FCC rules changes!
* FCC proposes vanity fee increase
* SAREX mission launches late
* FCC does another vanity run
* Dayton Hamvention award winners
* Gilfer Shortwave out of business
* ARRL/TAPR conference set
* FCC sequential call signs
* Solar Update
* Alfred T. "Ted" Goble, K2HNW, SK
* In Brief: This weekend on the radio; SAREX
at NSTA confab; Cronkite has surgery;
Boys & Girls Clubs on the air; Listen up for RFI;
New DX bulletin; Heard op gets good ink;
Radio museum on line

----------------------------------

FCC ISSUES CHANGES IN AMATEUR RADIO RULES

In response to three petitions for rulemaking, the FCC has adopted changes
to the Amateur Service rules that--among other changes--will make it easier
to obtain 1x1 call signs for special event stations and harder to get a club
station license. Other amendments to the rules included in a Report and
Order released April 1, 1997, will allow hams to append special designators
either before or after their call signs--or both, and will recognize, but
not require, the use of a session manager at volunteer examiner testing
sessions.

The FCC declined to give examination credit for formerly held licenses, and
turned down an ARRL request for a lifetime operator's license.

Under the new amendments, the FCC will allow a licensee to substitute a
self-selected call sign from the block of 1x1 call signs for temporary use
during a special event operation. The station must announce its regularly
assigned call sign at least once an hour. The special event call signs will
```

be coordinated and issued by outside volunteer entities, not by the FCC. The Commission will announce later when and how volunteer entities may volunteer their services. The chief of the Wireless Telecommunications Bureau then would certify volunteer entities to serve as amateur station special event call sign coordinators, who would issue 1x1 calls from a common, online special event call sign database. By definition, a 1x1 call sign consists of a single prefix letter, K, N or W; the region number, 0 to 9; and a single suffix letter, A to W, Y and Z--750 call signs in all. The FCC turned down a suggestion that would have limited special event call signs to stations licensed to Amateur Extra class operators.

In proposing to increase the eligibility requirements for a club station license, the FCC said it was "important to determine that the applicant for a club station license is a legitimate radio club and not just a person seeking to acquire additional call signs." Under the rules changes, the FCC has raised the eligibility requirement from at least two members to a minimum of four. Applicants for a club station license must have a club name, a document of organization, management, and a primary ham radio purpose that's consistent with FCC rules.

Responding to a petition by the National Conference of Volunteer-Examiner Coordinators (NCVEC), the FCC said VECs could elect to designate a session manager if they wanted to, but they would not be required to do so. The Commission's new rules recognize the VE session manager function but emphasize that the three volunteer examiners at a test session would still be held "jointly and severally responsible for the proper conduct of each examination administered."

Another change will allow hams to include a self-assigned indicator before, after or both before and after the assigned call sign when identifying. Current rules only permit using such indicators after the station's regular call sign. Self-assigned indicators include those used to indicate location or type of operation, such as /KP2 when operating in the US Virgin Islands or /m when operating in a vehicle. They also can denote participation in an unusual event or other atypical station operation, according to the FCC.

Citing mostly negative comments, the FCC decided against allowing exam credit for formerly held amateur operator licenses. The Commission also said "no" to the ARRL's suggestion that the operator license be valid for the lifetime of the holder. The FCC said operators would still have to renew their station licenses every 10 years and that it did not want to maintain a separate database to keep track of station license expirations.

The FCC announced all of the rules changes in a Report and Order, FCC 97-99, adopted March 20 and issued April 1. The amendments become effective 30 days after the Report and Order is published in The Federal Register.

FCC PROPOSES VANITY LICENSE FEE HIKE

The FCC has proposed raising the fee for a vanity call sign from $30 to $50 for the 10-year license term. The fee increase was among those included for all FCC-regulated services--including broadcasters and commercial satellite

services--in Notice of Proposed Rulemaking 97-49. Fee adjustments are an annual exercise for the FCC, which says it must calculate its fees to "recover the amount of regulatory fees that Congress has required it to collect in FY 1997." The FCC said the regulatory fees will recover the costs of enforcement, policy and rulemaking, international and user information activities for FY 1997, which began last October 1.

"We are proposing that applicants for amateur vanity call signs will pay a $5 annual fee per call sign, payable for an entire 10-year license term at the time of application," the NPRM states. Under the proposal, all FCC-imposed $3 annual fees will increase to $5 per year, which is the lowest fee in the new schedule. The FCC said it anticipated 10,000 applications for vanity call signs in FY 1997.

In the NPRM, the Commission said the fee revisions would create a system that relies on cost-based fees for services. The Commission's proposed schedule would reduce fees for services whose regulatory costs have declined and adjust fees upward for services that have higher regulatory costs.--FCC

SAREX-CARRYING SHUTTLE LAUNCH DELAYED

The space shuttle Columbia took off around 1920 UTC today (April 4) a little more than 24 hours behind its original schedule. Mission STS-83 is carrying the Shuttle Amateur Radio EXperiment--SAREX. Columbia originally was scheduled to be launched Thursday, April 3, but NASA postponed the launch for 24 hours after NASA managers determined that a water coolant line in the orbiter's payload bay required additional insulation to prevent it from freezing during the orbiter's 16 days in space.

Three hams are aboard the shuttle Columbia. They are James D. Halsell, KC5RNI, mission commander; Janice E. Voss, KC5BTK, payload commander; and Donald A. Thomas, KC5FVF, mission specialist. STS-83 is scheduled to last 16 days. The mission carries SAREX configuration C: voice and packet. The mission's primary payload is the microgravity science laboratory.

Eighteen schools, including institutions in the People's Republic of China and on Okinawa, have been scheduled for SAREX contacts during the mission. Because of the delayed launch, SAREX schedules also are likely to be postponed by at least 24 hours and could be disrupted.

The SAREX Working Group has designated the following frequencies during the STS-83 mission:

* FM voice downlink (worldwide): 145.55 MHz
* FM voice uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
* FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz

If packet is available, the FM packet downlink will be 145.55 MHz; the uplink will be 144.49 MHz. The FM packet call sign will be W5RRR-1.

Reports and QSLs go to ARRL-EAD, STS-83 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). You must also include an sase

using a large, business-size envelope if you wish to receive a card.

FCC DOES ANOTHER VANITY RUN

The FCC has granted another 420 or so vanity call signs, representing vanity applications received between February 6 and March 4. Some 330 of the applications ended up in the work in process or WIPS stack, many because the FCC was unable to issue any of the applicant's call sign choices. The vanity call sign program remains popular: During February and March, the FCC received 1768 vanity call sign applications, the majority of them filed electronically.

A reminder: Vanity applicants who did not get one of their call sign choices will have to apply in writing for a refund of the $30 filing fee. The FCC will mail to all unsuccessful applicants a copy of the application (including FCC processing numbers) and a copy of their check. To request a refund, applicants then must send a letter to the FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245, along with their taxpayer ID number (Social Security number).

The FCC still has not said when it plans to open Gate 3 for Advanced class vanity applicants.

DAYTON AWARD WINNERS ANNOUNCED

This year's Dayton Hamvention Amateur of the Year is Leo I. Meyerson, W0GFQ, the founder of World Radio Laboratories (WRL). The Technical Excellence Award will go to Al Ward, WB5LUA, an accomplished VHF, UHF and microwave specialist. The special achievement award will be presented to Joseph J. Fairclough, WB2JKJ, a pioneer in using Amateur Radio in the classroom.

Leo Meyerson, 86, is still an active ham (69 years) and still lives in Omaha, Nebraska, where he founded WRL in the mid-1930s. Among other ham radio gear, WRL turned out the well-known Globe series of transmitters (Globe Scout, Globe Chief, Globe King), many of which exist today as collector's items. WRL also was a major ham radio retailer, and many Novices of the day exchanged QSL cards printed by WRL. More recently, Meyerson was the driving force behind the current collection of ham radio and electronic equipment on display at the Western Heritage Museum in Omaha, which includes a WRL exhibit.

Meyerson is active in the Quarter Century Wireless Association (QCWA), which presented him with its Hall of Fame Award in 1994. He plans to be in Dayton to accept his award as Amateur of the Year.

Al Ward, of Allen, Texas, earned his award for his accomplishments in VHF, UHF and microwave technology. A ham since 1965, he holds WAS on 50, 144, 220 and 440 MHz, is working on WAS on 1296, and holds North American distance records on several VHF/UHF bands and modes as well as world EME DX records on 3456 and 5760 MHz. Ward has designed numerous circuits for VHF, UHF and microwave use, has written numerous articles and has organized and contributed to conferences for VHF-UHF enthusiasts. Professionally, Ward is an electrical engineer and works for Hewlett-Packard.

Joe Fairclough, of Sea Cliff, New York, is being honored his for years of using Amateur Radio in the classroom as a motivator for his students. Starting out with 30 students at Junior High School 22 on Manhattan's lower East Side, Fairclough eventually expanded and formalized his integration of ham radio into the classroom into a program he calls Educomm--education through communication. Today, he has more than 500 students enrolled in Educomm, plus students in other systems around the US using the Educomm Amateur Radio System.

The three awards will be presented at the Dayton Hamvention Banquet, Saturday, May 17, at the Convention Center. Ham-Astronaut Ron Parise, WA4SIR, is the banquet speaker.--Newsline/DARA/QST

GILFER SHORTWAVE OUT OF BUSINESS

Gilfer Shortwave of Park Ridge, New Jersey, is the latest casualty in the sagging radio hobby market, according to a reliable industry source. The company, which had been in business for more than four decades, had billed itself as "America's Premier SWL Center." Although primarily a retailer for the SWL and BCL, Gilfer also sold some Amateur Radio equipment, accessories and books.

Paul Lannuier, N2HIE, took over Gilfer a few years ago and served as Gilfer's president and technical director. He formerly worked for Japan Radio Corp, and Gilfer carried much of the JRC line. Lannuier has not been available for comment. Calls to Gilfer's telephones go unanswered, and the company's Web site is now dark.

1997 ARRL/TAPR CONFAB SET

Mark your calendar and plan to attend the year's premier event in Amateur Radio digital communication, the 1997 ARRL and TAPR Digital Communications Conference. This year's conference will be held October 10-12, 1997, in Baltimore, Maryland--minutes away from Baltimore-Washington International Airport (BWI). 1997 marks the second year in which the ARRL Digital Communications Conference and TAPR Annual General Meeting have joined into one conference! The 1997 DCC will be co-hosted by AMRAD (Amateur Radio Research and Development Corporation).

The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs and experts in digital communications, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.

Anyone interested in digital communications is invited to submit a paper for publication in the Conference Proceedings. Presentation at the Conference is not required for publication. Papers are due by August 20, 1997. Submit papers to Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111; lweinberg@arrl.org. Paper submission guidelines are available on-line at http://www.tapr.org/dcc. ARRL and TAPR especially welcome papers from full-time students to compete for the second annual student papers award. Two $500 travel awards may be given, one for the best

technical/theory-oriented paper by a student, and one for the best educational or community-oriented application paper by a student. The paper should relate directly to a wireless digital communication topic (see guidelines for more information). Papers co-authored by educators or telecommunications professionals also are eligible for this award, as long as a student is the first author. Deadline for receipt of finished student paper manuscript is June 20, 1997. Please note: This deadline is different than the general conference submission date.

The conference has scheduled seminars and symposiums on Friday afternoon and Sunday. Conference papers, selected topics thread, lunch, and dinner are on Saturday. Symposiums held at this year's DCC will include a full-day symposium on APRS packet-location software, a half-day symposium on spread spectrum system design and theory, and a half-day seminar on Friday entitled "RF Basics for Computer Weenies: Helping the RF-Challenged Get the Most Out of the New High-Speed Wireless Toys."

For more information, contact TAPR, 8987-309 E Tanque Verde Rd, No. 337, Tucson, AZ 85749-9399; tel 817-383-0000; fax 817-566-2544; e-mail, tapr@tapr.org; Web http://www.tapr.org.

FCC SEQUENTIAL CALL SIGN UPDATE

The following is a list of FCC sequentially assigned call signs issued as of April 1, 1997.

District Group A Group B Group C Group D
Extra Advanced Tech/Gen Novice

0 AB0EW KI0HM ++ KC0AIR
1 AA1RX KE1HL N1YWB KB1CDF
2 AB2DK KG2KS ++ KC2BGQ
3 AA3PO KE3ZI N3YZS KB3BST
4 AF4BV KU4EV ++ KF4QIR
5 AC5LX KM5IC ++ KC5ZSK
6 AD6AV KQ6NW ++ KF6JXT
7 AB7UQ KK7GL ++ KC7VMM
8 AA8ZU KI8BQ ++ KC8GTE
9 AA9UG KG9JZ ++ KB9PZR
N Mariana Is NH0A AH0AX KH0GS WH0ABG
Guam # AH2DC KH2RM WH2ANT
Hawaii AH7S AH6PA KH7DJ WH6DDT
Amer Samoa AH8O AH8AH KH8DH WH8ABF
Alaska AL0D AL7QT KL0FM WL7CUE
Virgin Islands ++ KP2CJ NP2JQ WP2AIH
Puerto Rico NP3C KP3AR NP3MI WP4NMZ

New prefixes are available for this block, but none have been issued.
++All call signs in this group have been issued in this area.

SOLAR ACTIVITY UP A "TAD"

Sun watcher Tad Cook, KT7H, in Seattle, Washington, reports: Solar activity was up a little this week. This was unexpected, as it wasn't present in the previous solar rotation, although an upturn is expected in connection with the next solar cycle. The average sunspot number was up almost 23 points compared to the previous week, and the solar flux went from the low 70s to 80. No word yet on whether this little blip in activity is from the last cycle or the next one. Unless more activity appears, expect the solar flux to drop down to the mid or low 70s again, then rise to the high 70s in a few weeks. April 22 through 25 may see some increased geomagnetic disturbances. Expect 20 meters to still be the best band for worldwide DX, with propagation extending into the evening as the days get longer.

Sunspot numbers for March 20 through 26 were 23, 0, 0, 0, 0, 0 and 0, respectively, with a mean of 3.3. The 10.7-cm flux was 71.5, 70.5, 70.6, 70.7, 71, 70.6 and 69.8, respectively, with a mean of 70.7, and estimated planetary A indices for the same period were 3, 5, 9, 4, 6, 12, and 14, respectively, with a mean of 7.6.

Sunspot numbers for March 27 through April 2 were 13, 18, 26, 29, 22, 23 and 52, respectively, with a mean of 26.1. The 10.7-cm flux was 72.2, 73.2, 75.3, 74, 74.7, 76.3 and 80.5, respectively, with a mean of 75.2, and estimated planetary A indices were 6, 13, 15, 10, 5, 8, and 7, respectively, with a mean of 9.1.

ALFRED T. "TED" GOBLE, K2HNW, SK

Physicist, professor and author Ted Goble, K2HNW, of Schenectady, New York, died March 12, 1997. He was 88. During World War II, Goble was involved in radar countermeasures research at Harvard University and in England, and later served as a military consultant on missile and satellite programs. He retired as a professor of physics at Union College in 1974. He co-authored the undergraduate textbook, Elements of Modern Physics. Goble had been a ham since 1924 and was a member of the Schenectady Amateur Radio Association. He was faculty advisor for the Union College Amateur Radio club station, W2UC. His wife and three sons survive.

IN BRIEF:

* This weekend on the radio: Take your pick of contests this weekend. Participation in the EA RTTY, Elettra Marconi, Holyland DX, MARAC SSB County Hunter's, the SP DX CW and the DARA FM Zip contests should keep you busy. See April QST, page 98, for details.

* SAREX at NSTA confab: ARRL Educational Activities Manager Rosalie White, WA1STO, is staffing the SAREX booth at the National Science Teachers Association national convention in New Orleans. The convention wraps up April 7. Over 10,000 science teachers will have the opportunity to see the SAREX booth.

* Cronkite has surgery: CBS News veteran Walter Cronkite, KB2GSD, underwent quadruple bypass surgery April 1 after doctors founded clogged arteries during a routine check-up. The surgery was a success, and Cronkite, 80, will

remain in the hospital for a few days.

* Boys & Girls Clubs on the air: Rick Zamoida, N1QZA, of the Manchester, New Hampshire, Boys & Girls Club ARC encourages all Boys & Girls Clubs to get on the air during National Boys & Girls Club Week, April 6-12. Zamoida's club offers Amateur Radio as a youth program and is trying to promote ham radio among other Boys & Girls Clubs in the US. N1GZA will be on the air as a special event station from 1900 UTC on April 10 to 1900 UTC on April 12 for the occasion. Frequencies include 7.035, 7.240, 14.035 and 14.250 MHz. Certificates are available. See April QST, page 97 for details. For more information, contact Zamoida at 603-625-5982; e-mail rczam@aol.com.

* Listen up for RFI: ARRL Lab Supervisor Ed Hare, the League's point man and in-house guru on issues dealing with radio frequency interference, recently took advantage of the vanity call sign program to obtain W1RFI. Under his former call sign, KA1CV, Ed has been well-known among the QRP community. He lives in Burlington, Connecticut.

* New DX bulletin: Bernie McClenny, W3UR, has begun publishing The Daily DX , an Internet HF DX bulletin sent out Monday through Friday. DX-related news such as DXpedition announcements and reports, press releases or general DX information are welcome via e-mail at bernie.mcclenny@mail.wdn.com or fax 301-854-5105. For more information, write The Daily DX, 3025 Hobbs Rd, Glenwood, MD 21738.

* Heard op gets good ink: Al Hernandez, K3VN, one of the VK0IR Heard Island DXpedition team members, was featured in a newspaper article about the radio adventure in the March 19, 1997, editions of Florida Today in its Brevard County People section. Several photographs accompany the article.--Tnx to Joe Dreher, W2TKG

* Radio museum on line: Fred Hammond, VE3HC, reports that the Hammond Museum of Radio is now on-line at http://www.kwarc.on.ca/hammond/index.html. (For more information on the Hammond Museum, see "Thrills, butter Churns and Honeycombs: A Visit to the Hammond Museum of Radio," QST, Sept 1995, page 29--Ed.)--Paul Cassel VE3SY

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

* The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

279. Pronunciation of Lima

My sentiments exactly, Aaron, although I do question the "5 WPM in a
week" part. I'm not sure how long it took me to learn 5 WPM, but I
believe it was more like two-three weeks.

Best regards,
Lindsay

Has it ever occurred to you that perhaps the free list might have been started just to pull your chains and see what kind of silly comments it provoked? I'll bet the guy who runs it is sitting there laughing his whatever off.

Jeez people...WHO CARES??? Don't you have anything more important to worry about? I've never read such a self-righteous bunch of crap. Get a life.

I took my code and passed. Ham radio is a hobby. You show your commitment to the hobby by passing the code. Besides, I set hour after hour studying to pass my code and I think everyone else should as well. If you do away with code then bands will be filled with trash like CB.

I said that!

285. This Week in Amateur Radio #210 (for air through 4/11/97)

Newsgroup: rec.radio.amateur.misc

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #210 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 11-Apr:
-
1. FCC Makes Numerous Changes to the Amateur Service Rules
2. Shuttle Columbia Carries SAREX Aloft after a One Day Delay
3. Fees for Vanity Call Signs May be Going Up Later This Year
4. Gettysburg Continues Processing of Vanity Call Signs
5. Veteran TV News Anchor Recovering from Heart Bypass Surgery
6. "Ancient Amateur Archives" with Bill Continelli, W2XOY
7. Weekly Propagation Forecast
8. "The RAIN Dial-up" from Chicago
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. "This Week" Uplink Time Moves to 9:00 PM EDT Next Saturday
-
Funding for the program's transmission and production expense was
provided this week by a grant from John Glass, NU6P, of Saratoga,
California, where "This Week in Amateur Radio" is heard Saturdays
at 6:00 PM on the NU6P repeater, on 224.80 MHz, serving Saratoga,
San Jose, Santa Clara, and Sunnyvale.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and on 160 meters at 1860 kHz. Contact your local amateur
radio club or repeater operator if "This Week in Amateur Radio" is
not being heard in your area.
```

-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

The APRIL 1997 winner for the Log-It v5.0 Logging Software giveaway

has been selected ...

The winner is : Drayton - KF4AME Miami, Fla.

You could be the MAY 1997 winner by submitting your name via the

Contest Page at my website.

http://www.esdi.com/log-it

Take at look at all the other features on the site which are free for

your use. Bulletin Board, "Chat Shack" chat rooms, demo downloads and

shareware.

Visit today !

Thanks ... Jim

We have a WINNER in the Log-It v5.0 Logging Software Contest !

Its : Drayton - KF4AME from Miami, Fl. Why not enter your name

for the MAY giveaway !?

My website has a free download of Amateur logging

software - and alot of other computer related programs too ! The

database is in full color, has logging, QSL functions, access

QRZ! cd-rom, search DX prefixes, ten minute timer, colorful

world maps with call prefixes for reference, awards tracking,

screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

There is also a bulletin board for Amateur Radio related stuff.

You can use it for messsages, sell/trade/buy, computer problems,

track DX and all kinds of things !

The site has a chat service for maintaining contact when the bands are

down and other times too !

Take a look ! Thanks .... Jim

Yes Don you hit it on the nose. Art was in a 3 hour talk show with
Wayne Greene editor of 73's magazine and other ham publications.
Looks like Wayne has gone of his nut somewhat. He was propounding
all types of health remeedies from sharks cartalege to castor oil
for cures of everything from aids to alzeiheimers. He just wrote
and will be publishing 8 new booksG about all that magic. Also
he was caughing intermitently throughout the entire 4 hour show,
sounded to me like he was terminal case. But one thing he know
how to do and that is to make bucks. He was sneering at the
fact that Art is an IBM man and Wayner was bragging about his MAC.
Nothing has changed. He still lambasting CW as useless, and he
started that tirade against the ARRL in the 50's and is still
carrying on with it. A hilarious show for sure.

Well, greetings from "the horses mouth".

I got such a kick out of reading all of the comments I thought I'd stop by and say HI to my fellow BAers.

Since some are interested in "why" there is another list for the BAs it's simple. I believe (and I'm allowed that pleasure) that on the Internet the mail lists should be free. If it cost to much to run it for free, find another way to run it or simply don't. I'd hate to see a trend started...although I'm sure it will happen. Now, do I think you need to "believe" I'm right? Nope....but I expect the flames anyhow.

Is it run by the City with the strange looking City Hall...that same City that brought you the Super Bowl 1996 and brings you the Fiesta Bowl each year? Yep. Do you think that football stuff cost any tax money? Hmmmm...I think SB XXX cost us about $200,000.

The reason the "Radio" groups are on our server (we also host the Collins and Heath lists) is mainly for testing. We bought a list server software package for $2,000 that we needed to learn how to manage - and test. You can't test a package without running some live data though it...hence the "ham" lists. It worked...we found some bugs (just ask the Collins guys), and at this point we think we have them all crushed. We are already starting to populate the server with some "city" lists now and we feel good about its operation.

Tempe is a big supporter of ham radio - giving us meeting rooms for our club, places for VE testing, and recently a classroom for ham classes. We are installing a station in the adult center and they donated a 2 meter repeater that we maintain on one of the City sites. Don't you wish YOUR City was as "ham friendly"? Enough about the host for the list server. As far as tax money...I see any tax money that "we actually get to make use of" as a good thing!! And who wouldn't?

You'll notice that I have not been pushing the subscription to the Tempe BA list...heck, I work for a City, and as a civil servant I'm sworn to not care if you live or die. Just kidding....but my attitude is...if enough people want it it will fly...if not, it won't. Time will tell. Meanwhile it's an option...not a stab at the other list (that I'm a member of by the way - and enjoy)...not an ego boost...but maybe it is the thing that I can offer to my fellow hams.

Let's get back to talking about radios that warm the shack and the heart!

I think you're talking about flying using the ADF. Yes, that's a direction finder. But it's not a "DF steer".

A "DF steer" uses a direction finder in the *tower* that reads out where a transmitter on the tower frequency is. If you ask for a DF steer, the controller knows where you are relative to the airport simply by glancing at the direction finder output. He will tell you to fly the reciprocal heading, and then watch your bearing change as wind blows you off course. He'll then give you a heading correction to keep you headed to the airport. Very useful if you're lost and your navigation instruments are dead or you can't figure out how to use them.

The controller can also figure out how far away you are by asking you to fly a heading at right angles to your bearing, then seeing how fast your bearing changes.

>>(the latter equates to more of the
>>older equipment (and tubes) being saved rather than being
>>dumped into landfills!).

> Mixed metaphor/s? "the latter" (as phrased) is not clear
>to me. Nevertheless, I agree totally with the basic thoughts.

"The latter" was supposed to refer to the new folks who had never
sub'd to the paid list. They might not have been interested enough
in BA gear to have paid to sub, but now with a free list (and all
its exposure!) hopefully their interests will have been sparked
into salvaging gear found in the garage, basement, attic, neigh-
bor's garage, et cetera. Our worst nightmare is hearing of old
gear and crates of tubes being tossed into a dumpster. If it takes
a second list to help save some of the older equipment from extinction,
then so be it.

Don't forget that in the past years, everytime someone on the BA list
brought up the idea of going to a newsgroup format (such as we now
have here), almost everyone else would shout "NO! It will dilute
the group!" It took going to a paid subscription to bring about
the creation of this rec.radio.amateur.boatanchors forum. And
mention of a future $20/yr fee (one week of meals for me),
tempe.gov simultaneously created the free BA, Heath, and
Collins lists. I believe we're better off now having all
these wonderful nets.

Radar is quite useful for that purpose.

>>ability to detect an
>>attempt to communicate by a second aircraft is also valid.

My *original* comment was that SSB would prove useful in this case.

>>As ex military aircrew and military/civil Air Traffic Controller
>>I can vouch for the fact that hearing a second, weaker, signal
>>acknowledge the same clearance is a definite plus for AM.

Again, my only comment (that began this portion of the thread)
was that with SSB, a second station can also be copied. SSB affords
more sensitivity over AM.

The AM heterodyne tone will only exist if the two signals differ in
frequency. With today's radios, you shouldn't count on that tone
even being produced.

>Absolutely Correct Dave. You would think a formar Coast Guard com
>specialist would know all this. Read the above Jeff.
> Jerry

Hi Jerry - As you well know, my training was in maritime communications.
All I originally said was "SSB would serve that same purpose" in regards
to someone saying AM was vital for determining when two stations were
transmitting simultaneously. And again, the (AM) heterodyne note will only
exist when the two signals differ in freq'y. (Think about how your receivers
operate: The IF mixes with the signal in the front-end to create hetero-
dyne products; if the IF oscillator and front-end were on the same freq'y
no other frequencies would be produced.)

Study what? The question pool? Anyone with a C average in school can pass
any of the written elements with less than a day's study if they have
the pool questions/answers, which are widely distributed on the net and
in books. I'm not advocating that people do it, just that the poster is
correct in saying there is no challenge in that.

GR>From: Greg Emerson <gregemmy@lni.nep>
GR>Subject: Re: CW should die, children, please...

GR>> >Hams seem to fear that everyone in the universe will want to join their
GR>> >ranks unless they introduce large barriers to entry into the hobby.

GR>Learning CW is a "large barrier"? Please!

GR>The truth is that people don't want to learn CW because it takes a
GR>little time and effort and they don't want to have to do it. I know that
GR>is why I didn't want to! But it was the requirement, so I did it. Can I
GR>just pass on the college classes that I think are bullshit and that I'll
GR>never use and get my degree anyway? Naw.

An amateur radio license is NOT a college degree despite implications
that it is an equivalent. There are few avenues for changing the
college minimum requirement courses in the USA and those that set the
requirements are NOT government people nor do they write codified
law. USA radio regulations ARE codified law, therefore open to
public debate. A professional degree is not an amateur radio license
for a hobby pursuit.

The ability to "read" morse code varies among different humans from
near-impossible to very easy. Those with an aptitude for code
cognition tend, humanly, to feel superior about it, often saying "if
I can do it, anyone can."

GR>I don't think it's so much a barrier they are trying to put up, or a
GR>"technically unqualified" element they are trying to keep out. CW takes
GR>a *little* effort and time to learn and I think people in this "instant
GR>gratification" period we live in want to talk on the radio NOW.

If the code test takes so little effort or poses such a
"non-barrier," why is it there?

The "instant gratification" statement is a rationale. I was legally
talking ON HF radios as far back as 1953. The subject of ending the
code test for an amateur radio license has NO relation to the
"instant gratification of today's liberals." While that may suit
conservative, keep-the-old-standards advocates, that doesn't justify
calling all who seek modernization of regulations as "liberals."

If this is some sort of analogy to Citizens Band, then it is out of
place. CB never required a test for the first permits. Arriving in
the late 1950s, it occurred the ire of amateurs because it "stole"
the little (mostly unused) 11 Meter band from amateurs. At the time,
many amateurs thought that ALL radio operators, any service, should

be licensed. The thought of UNlicensed persons operating a transmitter was an abomination, a sin. Actually, lots of unlicensed persons were already doing that, but keying a transmitter with only a permit was sacreligious. Today there are about 3/4 million non-amateur, non-CB, non-SS radios out in the USA being used as tools by safety, utility, and business folk who do not even need permits.

GR>I think learning CW shows a minimum level of committment and
GR>perseverance that are good qualities for people in the hobby to have.
GR>This minimum level of commitment and perseverence I am referring to
GR>transcends all levels of hierarchy. Poor people, rich people,
GR>handicapped people, yes, ALL people can qualify.

"Committment and perseverance" are ethical/moral attributes which are internal to the person, and may apply to ANY particular mode or activity in amateur radio. For ALL people. It isn't confined to morse code skill.

At one time, when the ONLY radio communications mode was on-off keying, your sentence would have been quite valid. That time has long passed and the code test has become an artificiality maintained by each generation of amateurs that passed the test, therefore all other generations who follow must also pass the test. That takes the code test well out of any realm of "committment and perseverance" when the work is done simply because all others had to take it. Such work is rightly called "hazing."

GR>I am not against "no-code"licensing nor do I look down at no-code hams,
GR>I just think I understand why learning morse code has been a requirement
GR>and I don't think it was a bad idea.

Those who have passed a test, any test, have the very human trait to make such a test into something more than it really is. Those who are very proficient at some skill may tend to glorify the accomplishment out of proportion in order to satisfy their own ego. Governments do not license egos. Governments do not license traditions.

Tradition has placed code skill as the "ultimate operator's test" in amateur radio since the first days of radio. Membership organizations have annually, continually reinforced that over the many years until it has become a Myth. Some call that the "Morse Myth." Many believe in the Code just from the mythos, paying allegiance to the dictum without truly understanding what it is they are praising. In any other venue that would be something like "worshiping a false god" or "being brainwashed."

What I use that works geat is from SPARCO Brand, and it is called Post Cards. The stock number is 00937 and they come in 501 cards per package. It says on the label "Designed for duplicating, typing, copying or writing." These are not pin fed, they work very well in my Canon BJ610. Ny logging program (LOGic4) normally prints my QSL cards, but I have also designed some using Prinst Shop Deluxe that came out pretty well.

Yeah, Greene probably attracted more new hams with those two shows and the re-runs than anything the ARRL has done lately. Of course, the downside is that those new hams will tend to be folks who believe that there's a Mother Ship behind Hale-Bopp. I guess they'd fit right in with most hams, though.

BTW, I miss those articles you used to write in "73." You might be interested to know that some friends and I used your book about how to build repeaters to help us start the biggest and best repeater system and ham club in the State of Idaho.

Many of us have proposed that the written test be generated by computer to
eliminate the option of learning just the answers to the questions in the
question pool.

> The "incentive licensing" scheme is ENTIRELY HELD UP by CW testing.
>Do we really want to hastily destroy this necessary foundation of Ham radio
>without considering some way to keep it going?

"Incentive licensing" is certainly NOT a "necessary foundation" of Ham Radio,
which survived very well without it for many years. In fact, it appears that
"Incentive licensing" mostly drove the slow-coders out of the hobby,
as our numbers started to decline when it was put into effect -- a decline
that only stopped with the advent of the code-free Technician license.

Responding to: jeffreyh@Hawaii.Edu (Jeffrey Herman)

Jeff:

You make some very coherent arguments in debate but,
obviously, I cannot agree with all. Rather than rehash all,
I'll pick up on your closing paragraph with some additional
comments.

>What do you feel was done that is unethical? Choice of name?

Unethical may have been too strong but an identical choice
of name for BA list at Tempe is totally foolish IMO.

>The name is generic.

Not quite! Certainly the PHRASE is generic but the
application is NOT. Tempe's choice is foolish for another
Mail List because it causes confusion for those that are seeking
the "Boat Anchors Mail List" when responses from helpful persons
will point to one or the other; either way, IDENTITY is DILUTED.

>Free venue?

This very newsgroup (alt.radio.amateur.boatanchors) already
gives "free venue". Is there something wrong with this? The
"third prong" from Tempe brings confusion and seems to add
nothing more.

>It gives those who've left over the past 12
>months another forum to participate in, and brought in new
>folks who had never sub'd to the paid list (....)

Where are your data? ;-)

Please review the just immediate paragraphs. Your statement
seems to me to be more of personal philosphy than
_reality_of_purpose_.

>(the latter equates to more of the
>older equipment (and tubes) being saved rather than being
>dumped into landfills!).

Mixed metaphor/s? "the latter" (as phrased) is not clear
to me. Nevertheless, I agree totally with the basic thoughts.

>

Perhaps Deignan should go and read the enabling legislation of his country. As I recall, it empowers the FCC to allocate spectrum and make determinations as to harmful interference and assess penalties as required. Does Deignan have any proof that the enabling legislation states otherwise? For that matter, what is the role of amateur certification? Correct me if I am wrong, but the bottom line is to ensure that amateurs don't cause interference.

> >Since Morse code testing has utterly failed to do so, what justifies Herman's

> claim something that he disagrees with as a "failure" because he himself
> doesn't like it.
>

Whether I like Morse code has nothing to do with the efficacy of Morse code testing in order to permit individuals to operate below 30 MHz. In that Morse code is useless to mitigate interference is not opinion, but fact. Is Deignan able to show that the health of the radio frequency spectrum is worse in those bands where there are no-coded amateurs? I think not; indeed, most of the miscreants that are assessed penalties are to amateurs that have passed the Morse code for their misbehaviour on the HF frequencies.

I would be more than pleased if Deignan would be good enough to refrain from telling me what I like and dislike, I believe that I more capable of rendering such decisions.

> In typical "lowest common denominator" fashion of the welfare-state
> mentality, Cummings then attempts to erect a strawman claiming that
> since morse code testing has "failed" (something never established)
> then by 'definition' "all" operational tests are invalid.

The only straw man that is in evidence now is Deignan's attempt to link my objections to operational testing with the welfare-state mentality, whatever that means. Do I believe in a welfare-state, I most certainly do, so that my fellow human beings can be helped along with the eventual goal of being able to become productive members of society. Does that thinking extend to amateur radio? Hardly, because we are discussing a priviledge which is irrelevant to an individual's existence.

Deignan seems to be unable to read the subtle message that I posted. Let me be blunt, operational testing is of no value in amateur radio for the following reasons:

1. Impossible to achieve a level test criteria. This means that the variability of achieving a consistent, evenly applied test across the nation would be impossible. The ease or difficultly would likely be proportional to the whim of the examiner, and unevenly applied across the nation.

2. Operational testing is "pro forma". Such testing will result in very few failures. Although this would seem to be counter-intuitive to the first point, candidates would quickly learn which examiner is most likely to pass them, and go to them for that phase of the examination. Since every examination would result in success, it hardly seems worth the effort to have such an examination. (The problem is that it is easier to pass an individual on just such an examination rather than to justify the failure because there is little documentation to support the failure.)

3. Operational testing has no value in the context of amateur radio. Amateur radio is not a safety service - we do not, as a rule, communicate with other entities within internationally rules, i.e. as for what is stipulated in the martime mobile service. We have developed conventions among ourselves, but the fact of the matter is, that is only to satisfy our own needs. If someone is ignorant of our procedures, we should have the generosity of spirit to guide them, otherwise they will become frustrated and abandon amateur radio. But to up the ante by adding an operational test? In as much as Deignan is quite capable of being disparaging, let him answer the following - what is the need for operational testing? What problem would it solve? For that matter, he has never stated why Morse code testing should be continued (other than to state it must stay, by fiat)?

4. Operational testing would require a substantial effort of already licensing amateurs to assist in the education of those who wish to be amateurs. I believe that such assistance would be a noble endeavour, but practically, there are very few that would do so. Besides, as I have stated before, there are those who call for such testing that by their own admission would not qualify to assist in providing the opportunities to get practical experience operating a station because of their own narrow interests. As I stated before, even Herman would not qualify because I understand that he has no radiotelephone or digital equipment at all; indeed, he has disdained the

use of these modes. He is entitle to pursue these interests as his wishes, but it is quite disengenuous to make a proposal in which he is unable to walk the talk.

5. Operational testing is oxymoronic. For example, Morse code is still used for EME, satellite and weak signal operations in the VHF bands. Yet it is not required to know Morse code in those bands. It defeats the purpose to bring back a mode test for which there ample evidence that it is no value (in refute to Deignan's above mentioned contradictory notion); otherwise, that requirement would have remained. For the other modes, what sort of examination would Deignan design for the operational test?

I think that is enough for today. If Deignan thinks that operational testing is of value, then I whole heartedly invite him to make the proposal to the FCC, otherwise he is only arguing for arguements sake.

The true
> reason for Cummings' claim is that any operational testing implementation
> would go against his "give away the licenses" beliefs.

I don't have those beliefs, so how could they run counter to them? But then again, Deignan also believes that Gary Coffman has said the same ilk. I shall let others decide on their own as to whether Deignan is capable of determining of what I do or do not believe.

> Cummings
> attempts to further justify this with a "chicken before the egg"
> argument, claiming nobody would be able to pass a test because they
> couldn't get experience to pass the test.

No, Deignan is incorrect, I make the case that it is egg, then the chicken, not the other way around. The only way that the individual can get the experience and practise the requisite skills is under supervision of a licensed amateur, unless we agree that the individual should be allowed on the air without any licence at all, an oxymoronic situation to say the least; allowing someone to get practical experience on the air without a licence. In any case, that can be problematic for those who are unable to find an elmer due to whatever reason, i.e. the local amateurs are a bunch of lazy louts, there are none locally. As a result, this individual who had not the opportunity to have the operational experience beforehand is at a severe handicap in passing an operational examination through no fault of his/her own. In as much I think it is a good idea to coach an individual along, but to test for it when it is of little value? What problem is Deignan hoping to solve with the introduction of operational testing?

> Of course, Cummings naturally
> fails to acknowledge that popular proposals in mode-based testing calls
> for an "entry level" license with a wide-range of operating privleges
> with limited bandwidth and limited power, to allow people to get
> familiar with the modes they intend to operate.
>

Popular? That's a stretch. The only reason why they are popular is that the pro-code testing crowd has realized the inutility of Morse code testing for amateur certification. As a result, in the hopes of retaining Morse code testing, they believe that all-mode testing is now required. What Deignan fails to discuss is the efficacy of any-mode testing in amateur radio. Again, if he thinks it is so valuable, then let him work on it and propose it to the FCC; otherwise, he is full of his own rhetoric.

Your comments on the subject of retaining the Morse Code requirement
remind me of ancient Witch Doctors, who believed that chanting the same
thing over and over again, without reason or logic, made the saying
true. Why does it need to be a critical part of licensing? What good
does that do?

>without the code, there is simply no challenge to
> obtaining a ham ticket. None whatsoever.

Golly, I guess you are such a brainiac that you could pass a theory and
regulations test with zero effort. None whatsoever. Pretty cool. I
couldn't do that. I had to study.

>I'm sure that even the most hard-
> core CW-test-haters would agree: If everybody could get an Extra >ticket on
> their first test date, the airwaves would be teaming with newbies

Well, thank God. At least we don't have to worry about that. The HF
bands very definitely are not full of newbies. There are very few new
hams. Somehow you seem to think that this is a good thing.

Incredible.

>I'm 21 years old now (as of January), and head up Washington State
> University's "Rho Epsilon Amateur Radio Fraternity."

I wondered how it was you knew everything. Now I know. :)

>My point after all this: I think CW is great, and I enjoy using it

> I don't believe, however, that the so-called No-Code movement had >considered
> the impact that removing the code testing would have on incentive >licensing.
> It would be devastating.

How do you know? For that matter, what is wrong with killing much of
incentive licensing? I was a ham before incentive licensing existed,
and the hobby was more active and vital by a factor of ten than it is
now. It was teaming with new hams, of all ages, and was truly a

pleasure. Nowadays our hobby is largely an old man's hobby.
How many times do you hear "age hr is 79, been retired for 22 yrs."

> In my own humble opinion, many of those who call
> themselves "No-Code" activists are simply along for the ride -- >selfishly
> awaiting the day when they can rush to the local W5YI session, >take 3 theory
> elements, and walk out an Extra. You can all claim otherwise

Well thank you, I think I will claim otherwise, seeing as how I am
already an Extra, as are many or most of those of us who are agitating
in favor of eliminating Morse Code testing.

>but that's
> what I'll believe until I see a valid attempt to replace the brace that CW
> has built for incentinve licensing -- or does anybody care what happens to
> our fine hobby?
>
> I do.

I do too. And I've been a member of our hobby for 30 years, and watched
it go downhill, largely due to incentive licensing. Most of us who
remember the way the hobby was before incentive licensing recognize that
incentive licensing was a disaster to our hobby.
It has never been the same since.

>shut you up! hi!

I would *seriously* suggest that you *not* bump power poles with an
auto. And I'd be very careful banging on a power pole with a sledge.
Loose hardware (which may be causing your noise problem) could allow
the line to drop on you if you bang it hard. A smaller hammer may
be acceptable, and whipping a guy wire by hand may also produce a
useful result while keeping you from being directly under the pole
hardware when you perform the test.

Most power companies have a maintenance group whose job it is to
hunt down these sorts of noise problems. It is to their benefit
to do so since these noise problems are often a precursor to a
more serious system problem. Do call them, they are usually very
cooperative.

Deigman might try reading the Communications Act of 1934, which sets forth the purposes and objectives of govrnment regulation of spectrum access.

>In typical "lowest common denominator" fashion of the welfare-state
>mentality, Cummings then attempts to erect a strawman claiming that

It is interesting to note that it is only those appealing to the government to maintain a life support subsidy for Morse (welfare statism at its lowest) who raise the spectre of "welfare state mentality". Perhaps that comes from looking in the mirror. A truly viable operating method needs no such subsidy. But the welfare statists are obviously fearful that Morse cannot withstand free market competition from other methodologies without coercive government measures.

As a guess I would say perhaps the metal support is causing the
problem. Loops of this nature cannot tolerate nearby objects of
metal. Try a temporary wooden support and see what happesn.

I would appreciate your comments if you try this scheme.

Good Luck

>
>Would I be able to but equipment, as inexpensively as possible, to receive
>this feed?

It isn't a hard technical problem, and costs aren't large, but legal issues may cause it to be infeasible for you.

You'll need a C band TVRO system with a FM subcarrier receiver capable of tuning to 5.41 MHz (TVRO receivers normally have two subcarrier receivers built in, usually tuned to 6.2 and 6.8 MHz for stereo reception, but may allow tuning to other subcarrier frequencies, otherwise you'll need an external subcarrier receiver). The TVRO system implies a dish antenna (somewhere between 4 and 10 feet in diameter depending on where you're located in the footprint, and on how good the LNB is), and the receiver system associated with the dish. You should be able to find equipment for about $500 (a bit less if you can scrounge used equipment, quite a bit more if you need turnkey installation).

The most serious issue facing you will likely be restrictive covenants which may prohibit you from erecting the required dish. If you live in a subdivision built in the last 20 years, it is likely that it will be encumbered by a covenant prohibiting such an antenna. If you live in older housing, or in a rural area, this is unlikely to be a problem. If you live in an apartment, getting management's permission can also be a significant obstacle.

Bill, I think you misread Greg's statement. He states above that he DOES understand why learning morse code has been a requirement.

I, too, understand: It's relevent, it's effective, and it's a way to keep the HF frequencies from becoming severely congested.

For any given license, the requirements for HF access are the same for everyone. Admittedly, some individuals will expend more time and energy than others to master the code, just as some folks will spend more time on the theory than others. However, nobody is being denied access because of some egregious bias.

Best regards,
Lindsay

>K8EF

The FM threshold for modern VHF NBFM equipment is in the range of 0.3 to 0.5 microvolts for 12 db quieting. For an equivalent "quieting", modern DSBWC AM equipment requires between 2 and 5 microvolts. Weak signal performance is *not* why AM remains viable for ATC (and the SSB weak signal advantage over AM is 8x, not an insignificant difference). The big argument against FM for ATC purposes is capture ratio. A signal 3 to 5 db stronger than another can capture the channel and mask the weaker signal *regardless of absolute signal strength values*. That's important since ATC usage is *not* weak signal work.

Both AM and FM can take advantage of AFC to handle doppler (a significant factor at jet aircraft speeds) and frequency tolerance errors. SSB cannot take advantage of AFC. That's a major argument against SSB for ATC. Mor does SSB lend itself to rapid RDF, while modulations using a constant carrier, IE conventional DSBWC and FM, do.

A possible answer to both of these complaints is ACSSB. The pilot tone can serve as an AFC reference and RDF marker. But ACSSB adds complexity for little benefit. The ATC service is not in need of doubling the number of channels available, so bandwidth conservation isn't a major driver. And ATC normally conducts line of sight communications, so weak signal performance is a moot issue as well.

ATC comms are a critical life safety service. If modulations other than DSBWC provided *significant* advantages, it would be in everyone's interest to change over to those superior methods immediately. But there

are no significant advantages to SSB or FM over AM for the ATC role, and there are some significant deficits *in this service* for both of the latter modulations, so there has been little reason to change. The large installed base of airborne and ground based AM equipment has tipped the balance in favor of retaining AM because there is no compelling technical or operational reason to change to such things as ACSSB.

Note that other life safety services such as police and fire dispatch *have* abandoned AM for FM (many years ago). *In those services*, there were compelling reasons to do so. In a ground enviroment, where multipath in ground clutter makes FM capture a valuable asset (the multipath signal is often weaker than the direct signal by 3 db or more, so capture reduces the effects of multipath), where non-line of sight paths make the FM quieting enhancement useful, and where a positive squelch action is an operational necessity, FM is better.

But for these other services, the bandwidth consumed by NBFM has become a constraint because, unlike the ATC role, more channels are needed for these services, and there is pressure on the available spectrum. SSB still isn't a player here due to frequency netting problems and squelch threshold problems, but ACSSB or digital methods are viable contenders to reduce spectrum waste and make more channels available.

Spread spectrum is an alternative for increasing spectrum utilization efficiency, but has gained few proponents to date, due in no small part to a lack of operatonal experience with it in the terrestrial mobile environment. Amateur radio *could* have played a valuable role in gathering that operational experience, but due to resistance to its effective use by the amateur community (in the form of opposition to liberalization of the amateur SS rules), that opportunity to serve as a test case has been largely lost.

While digital methods of one sort or another will likely win in the longer term for these services (it appears ACSSB has lost its window of technical viability), in the short term, the answer appears to be political pressure to acquire more spectrum (currently the pressure is to grab it from broadcast UHF TV). In the DTV ruling just handed down by the FCC is a provision to grab some broadcast TV spectrum for public safety service use.

This latter political grab has had an impact on the planned move to DTV. The initial plan was to move all broadcast TV to DTV at UHF, but the need to grab UHF spectrum for public safety communications services has modified that. In major markets (where demand for additional public service capacity is most intense), broadcast is being assigned *VHF* DTV channels instead of being moved to UHF. For example, in Atlanta the NBC affiliate (ch 11) is being assigned channel 10 as its DTV channel. That's possible due to the superior adjacent channel performance of the 8-VSB digital modulation chosen for DTV broadcast. The effect of this is to prevent the longer term freeing of broadcast VHF spectrum for other uses (such as little LEO use). Thus an indirect result of the resistance by the ARRL and others to rules changes permitting wider

use of SS in amateur spectrum is to bring increasing pressure on the amateur bands by other commercial forces.

These actions should serve as important lessons for the amateur community, but I'm afraid they will be ignored. The most important lesson is that we cannot ignore what is happening in other services, because they can impact, directly or indirectly, amateur spectrum retention. The secondary, but still vitally important, lesson which should be learned is that we can be hoist by our own petard for resisting serving our traditional role as the world's largest beta test organization for new technologies and their operational deployment. If we had been able to deploy effective SS techniques earlier, we could have forestalled the need for public safety to grab broadcast spectrum by providing direct evidence of the operational advantage of SS for improving spectral efficiency and occupancy.

That would have permitted us to serve as a test bed for public safety and land mobile use of SS (much as amateurs served as a test bed for the viability of SSB on HF for the military, and others, in an earlier era) which would have reduced the pressure for more public safety spectrum and allowed broadcast to move to UHF and free VHF spectrum, other than amateur, for the little LEO operators. But shortsighted policies by the ARRL and others, such as the repeater bodies and traditional Dx and weak signal groups (based primarily on ignorance and fear of change), has lost us that opportunity. So now we may pay the price for that denial of one of our important charter purposes. How many more times can we afford to make that sort of error?

IMHO we cannot afford to make that sort of error again. We must push for the *maximum* possible technical freedom to deploy and test new methods, *anywhere* in our spectrum. And we must push to abandon policies which unduly favor obsolete and technically deficient modes of operation (such as OOK Morse, you knew that was coming). And most importantly, we need to foster an *attitude* in the amateur service as a service which is a forward looking and experimentalist early adopter of newer and better technologies. That can regain for us some of the impetus to serve our important charter goals.

> would you tell me what the packet radio is ?
>I am new to ham world, and I am confusing a little bit...

Packet is a method of sending digital data by radio. It does this by forming the data into frames, called packets, and sending them out wrapped in a protocol called AX25. This protocol has embedded identification of the stations involved in the header of each frame, a frame number, and a CRC error check sequence. When such a frame is received, the receiving station performs a CRC on the frame, and if it passes, sends back an acknowledgement frame called an ACK. If the frame fails the CRC, the receiving station sends back a NAK and the transmitting station repeats the frame. If a frame is so badly mangled in transmission that it is not received, the sending station will repeat it after a preset wait for an ACK or NAK frame.

There are other features of the protocol which allow multiple stations to take turns using the same radio frequency. This is done by monitoring the channel and not transmitting when another signal is heard. There are timing features built into the protocol which attempt to ensure that two stations don't try to transmit at exactly the same time. This doesn't always work, and when it doesn't it is called a collision. The stations will then retry the frame in accordance with the protocol outlined in paragraph one after a random wait. The random wait assures the two stations will not *again* try to transmit at the same time.

All of this protocol stuff is usually taken care of by a device called a TNC, which appears like a simple modem to your computer. But the protocol can also be done directly by your computer. Then you require a special program rather than a simple terminal emulator.

TNCs generally contain a default radio modem. This is normally a Bell 202 standard modem used half duplex. This gives you 1200 baud. Other modems can be fitted to give higher data rates. At the highest data rates in common amateur use, you abandon the TNC because it can't keep up and go to a direct connection between the data modem and the computer using a special interface card in the computer. This is commonly required for 56 kb and faster data rates.

The modem signal is fed to the radio for transmission. Bell 202 1200 baud will usually work with an unaltered FM voice radio.

9600 baud K9NG/G3RUH modulation usually requires some radio
modifications to pass through a voice grade radio, and won't
work properly at all with some frequency synthesized voice radios.
At 56 kb and above, the modem *becomes* the radio. These RF modems
are purpose designed for the signals they generate.

Packet is inherently a cooperative mode of operation, and you need
to coordinate modulations and frequencies with others in your area.
Generally there will be one or more local *networks* setup in your
area to relay packet signals.

339. 900 mhz operation

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-05 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <33467389.17082606@news.sprynet.com>
Source record: 201040

A few weeks ago, I purchased a cordless phone. A
couple weeks, after the purchase, I discovered it was a 44 mhz phone,
rather than the 900 mhz phone, I thought it was.
I commented to both motorola and radio shack, via email, that the
phone was somewhat missadvertised. In the advertising, there was no
meantion of frequency used yet it was on the same page as new 900 mhz
units. I figure a natural mistake, even for an amateur, hi/chuckle.
I took the cordless phone back to radio shack, who were very nice and,

realising my error, replaced it. I bought the sanyo clt-9261, the
only one in the store of 900 mhz operation. It advertizes to use
spreadspectrum and 900 mhz. I hope i am right this time, hi.
I many reason for the purchase was to educate myself about the style
of operation even though it is very 'close circuit'. As time goes
on I would like to get more familiar with spread spectrum.

Personally i think that spread spectrum will eventually replace
traditonal radio like vhf fm replaced traditional local contact
coverage on amateur radio during the 70's and 80's.
Any observations/comments from anyone else?
Larry ve3fxq

>make the statement above truthfully. There are some people for whom
>code only comes with great effort and struggle. Some of us in this
>group get really tired of hearing how easy it is to learn code.

> Jerry

Jerry make a very good point (not only do some people find code very hard, but also those who succeed at it tend to substantially underestimate the true time spent mastering it). Also, Aaron trips up over a substantial contradiction in the default position put across by the pro-code camp (Phil Karn, KA9Q, deserves at least early, if not original, credit for pointing this one out). That is:

Morse code is a challenge. As such, it ensures that new hams are disciplined and committed to the hobby.

and

Morse code is very easy. Anyone can learn the code in (insert some short amount of time here). Anyone who can't is lazy.

So which is it? Is code very hard (discipline exercise to ensure only the very best become hams) or is it very easy (those who fail at it are lazy, or even mentally defective)? If it is very hard, then should we look down so much on fellow hams who are unable to master it for one reason or another? If it is very easy, does it truly have any benefit as a licensing requirement? I would argue that not only is such an argument hopelessly unanswerable in all situations, it substantially misses the true point. That is, as a licensing requirement, code is irrelevant.

Is that the ONLY justfication you can come up with for
the retainment of an OBSOLETE mode of communications
(CW), by using an example out of a science fiction story...??
hell, I would bet a dozen "do-nutz" (grin), that the nutcases
from the Heaven's Gate cult could have come up with something
better than that! It's almost as lame as the other excuse I occasionally
hear that someone is going to pull 2 wires out of their radio
transmitter on an island somewhere, strip the insulation with their
teeth, then start sending an S-O-S by shorting the wires together.

Finally, if you ham op's feel that the retainment of CW will act as a
"filter" to keep your "precious" ham bands from becomming another
C.B. Radio, then please first answer me the question why you have
so many garbage-mouth operators on your 75 Meter band, and all day
long on 14.313/14.300, ALL OF THESE FREQUENCIES HAVING THE
REQUIRMENT THAT ONE KNOW 13 WORDS PER MINUTE OR BETTER AND
HAVE A GENERAL-CLASS OR HIGHER...? How do YOU explain this
apparent FLAW in your logic...??

Kurt - SWL since '69 , CB Op since 73.

ps: If you missed Wayne Green's interview with Art Bell earlier this
week, you missed one of the best descriptive characterizations
of your hobby I've heard in a long time.

Keith wrote:

Well Bill thank you for sharing your feelings. I still do not agree with your comments regardless of how much logical you try to insert.

The CW part of ham radio is as much a vaild part of the "hobby" as the the written requirements. Any ham study manual you read, and even documents that does not relate to ham radio, always seem to reference some part of the cw history and theory behind what has led to modern day communications. As modern digital communications is taught in the schools and colleges, they reference cw as an early form of digital communication.

You may reference part 97 if you like. I can tell you that as much as some folks may want to think of ham radio as something more than a hobby it is still nothing but a hobby. I don't beleive there is any requirement on becoming a ham that requires me to in the event of an emergency turn on my equipment and begin passing traffic. I do understand that in an emergency that any frequency (fire, police, business radio, etc...) can be marked for emergency traffic only until the emergency is over. But that goes for our good buddies on 11 meter as well.

I do not mean this as a negative comment and please don't take it that way but, it is the efforts of liberal thinking folks like you that are adding to the complete decay of not only amatuer radio but our society in general.

There is simply no harm in continuing the code requirement. I can't think of a single person that has died from the study of code. The FCC

gave in to the weak by allowing no-code in the 1st place. So for those with enough money (reference your statement of cost) and able to pass the test, go get yourself a VHF rig and talk till your are content. I myself started as a no-code.

Have a great day and if you feel that you must delete my message because you no you can't provide a positive reason to remove the code requirement. I have a suggestion.....why don't you focus your engery on something more useful like.....drugs, and other hard hiting issues that impact real life!

As new condition, never used - Condo assoc won't allow it. First $200, we're located in Hallandale, Florida.

The Gap Challenger is an 80,40,20,15,12,10,6, and 2 meter vertical. It stands 31.5. No radials, no traps. See it in February 1997 QST page 177 or on the WWW at gapantenna.com.

New its $259 plus shipping.

Fine, what's your definition of a "popular" mode? Used by more than
50% of all amateurs? Used by 22% of all amateurs? Used by 2% of all
amateurs? And what about the *unpopular* modes? Are you going to let
people use modes for which they haven't been tested? And what about
the modes currently being invented? Who writes those tests?

And how about the distortions in usage statistics which are purely
an artifact of current regulations? Perhaps T1 rate digital would
be the most popular mode on the lower end of 40m if it weren't
prohibited by regulation, or more realistically, SSB might be the
most popular mode on the lower end of 40m if it weren't prohibited
there.

Where do you draw the line? And how do you even determine usage
statistics uncorrupted by regulatory artifact?

>off station they just talked to.

True. :-)

>Now the other side...
>
>With the latest digital techniques, what are we up to, about 20kbaud?

The current amateur SOTA is 100 Mb. The amateur SOTA 5 years ago was
1.2 Mb. The amateur SOTA of 10 years ago was 56 kb. The amateur SOTA
of 20 years ago was 1200 baud. Unfortunately too many amateurs remain
stuck at the SOTA of 20 years ago in packet. But at least that's better
than being stuck at less than 20 baud like the Morse users have been
for nearly a century. Morse users have made no progress since the
adoption of continous waves.

Note that we're stuck at 300 baud on HF, but that's because of
regulations, not because of engineering feasibility.

>And what do you guys discuss that necessitates this high speed
>throughput? Nothing. Sorry, not quite true, there's how big the antenna
>is, what the power amp rating is, and what far off station was just
>contacted. Only difference is you run out of things to talk about much
>faster...

Actually, we exchange video (still and motion), text and binary files,
do digital voice, send schematics and board layouts, browse the web, etc.
It is amazing how much more genuinely useful radio becomes with a little
bit more throughput.

>As soon as the satallite phone system is in place, you digital guys will
>sell your ham equipment, right? I mean, you want the very latest in
>maximum data throughput. No one wants to settle for that "old
>technology", right?

No, we won't sell our ham equipment. We have no control over commerical
provider networks. We can't experiment with hardware or protocols on
commercial provider networks. We certainly want fast, but we want it
on *our* terms, not on those of some remote commercial provider.

>Give it a rest, it's a hobby. Each of you imply you're somehow better
>then the other. The joke is, people outside this hobby view each of you
>as the _same_; geeks!

It's more than a hobby. It is a chartered radio service with definite specified purposes and goals. By experimenting with modern digital systems we support those charter goals. We're self-training in contemporary communications technology, developing a pool of trained technicians and electronic communications experts to serve an augmentation role for the military and civil government in times of national emergency. We are advancing, to some extent, the SOTA in ad hoc networks and low cost digital hardware (amateur developed digital systems were used in Desert Storm). We support the logistical needs of emergency service agencies. And we even contribute a tiny bit, due to regulatory limits, to international goodwill by handling message traffic for foreign operators.

And of course we have fun doing much of this, and have a sense of satisfaction for doing other parts of this. We receive no other pay. We could do much more, of course, but we face the same "I've got mine" mentality by entrenched interests that others attempting to use modern techniques face (and have faced down through the years). But just as SSB supplanted AM, we expect to eventually dominate text transmission in amateur radio (we already move more text in an hour than the world's Morse operators do in a week), and ultimately video and voice transmission as well, if amateur radio isn't killed first by the Luddites.

Hello.

I was trying to use a satellite to get the signal out and back, but it
did not work well. I tried many satellites, but none of them seemed
to work at all (I used the software to track down the satellite).

I have a 45W base station + 30cm antenna (it's in inside).

do you have any ideas ? are you usually able to talk to someone
easily over the satellite ?

Thanks in advance.

Hi Jerry - There are quite a few Novice study guides being sold, too, but
we can't say that's due to the Novice exam being difficult to pass. When
someone sees an opportunity to makes money, they'll create and market a
respective product.

None of those code learning devices are necessary; all one has to do is
utilize the on-air W1AW practice sessions, or listen to live code QSOs
(that worked for me). Once 5wpm is mastered and the Novice or Tech+
license is earned, then one only need get on the air and their code
speed will rapidly increase - it won't even seem like work, especially
if you're on 40m talking to someone half a world away.
73,
Jeff

You make me proud to be an American. I am happy to hear one person say oh what the hey, I will live in the box and pass the code. Yes, forget it afterwards if you have no desire to communicate via CW. I think you may be surprised to find that you may like it once you have tried it. But, atleast you respect the fact that it is a requirement and are not going to let it be a road block for you. Way to go, do whin, just do it. Good job!

Oh, when you get your General Class ticket or in your case Advanced Class ticket, send me an e-mail and I will set up a schedule cause I would enjoy having a QSO with someone with the guts to stick it out.

>> is defined by the FCC as a hobby.

Nowhere in Part 97 is "ham" mentioned, either. But 97.1(e)
does encourage us to work DX, and I honestly can't see who
or what we're serving in that regard; it would appear the
FCC did leave the hobby door ajar for us.

Tell us, Bill - what service did you provide the last time you
got on HF? Do you provide a service each and every time you key
your mic and ragchew?

>> Lastly, you claim that without code the bands will
>> be like CB, yet with over 100,000 no-code hams
>> we have nothing CB like on the VHF bands at all.

The amateurs in at least L.A. and Seattle will certainly
disagree with you.

>> Neither you nor anyone else can predict what the
>> impact might be if code is dropped. Fear of the unknown

We have a living example of what happens when an HF amateur
band, 11m, is given to no-coders.

We've already covered this ground, Pom. The garbage you hear
represents less than 1% (less than 6000 of the 600,000+) of all
licensees, and it does show that even morons can learn the code.
But to see the code filter in action, tune down to where the
code is being *used* - you won't hear any of the nonsense that
occures in the voice portions of the bands.

Myron,
Their are several ways to link these repeaters. They all rely
upon the controller to be able to perform the needed functions. Most
controllers in use to day are microprocessor controlled and will
handle several types of links.

The Easiest if a Simplex link on a say 70cm. For a more transparent
system you can use a Full Duplex link on 70cm.

I can get into a more detailed explination on the links if you would
like.

Right, let's protect CW. (And when you hams lose another couple
of Mhz from your VHF/UHF allocations I'll sure love 2 hear you all
moan & groan) BTW, I will be going for my ham call in April or May.
Have FCC/Commercial since the mid-70's. Took your advanced
class theory test and would have aced it but for 2 questions on ham
rules & regs. Now I'll have to learn that stupid code, oh well, guess I
can get it and then forget it as I don't intend to use CW. BTW, the
engineers I work with said that they would go get a ham ticket
"tomorrow", if they did not have to learn code. Can't say I blame them.
I'm learning it via the tape method, only since I have some spare time
available. Just thought that you hams might like to know that your
stubborn neo-fanatacisim over keeping 150 year old morse code has
kept two of my associates, each of whom has a Masters in electrical
engineering, away from your ham radio hobby as they feel that learning a
150 year old mode of communications in 1997 is a complete waste of valuable
time. (Chaps like me, who passed your Advanced theory "test"
in one sitting) Hell of a filter....eh mon?

Kurt - SWL since '69, CB since 73.

DH>From: holford@cnwl.igs.net.nospam (D. Holford)
DH>Subject: Re: Question about aircraft using AM instead of FM

DH>Well, let's see:

DH>When aviation communications changed world wide from AM to SSB
DH>it was not considered advisable to do the same at VHF.

I'm not sure why this continues to be a topic for radio amateurs, but the above is not quite correct. The vast majority of civil airways communications occurs on VHF using AM. HF frequencies were used before the 60s for local positive control, but air traffic was getting too dense by then. Right now HF SSB frequencies are allocated to long airways away from line-of-sight VHF ground stations. Air carriers used to have CW operators on board for those long trips but that was replaced by SSB operated by the regular crew.
...

DH>Therefore, one assumes, there are valid reasons for staying with
DH>AM. The complexity of SSB at higher frequencies is obviously one,
DH>the presence of a carrier for DF is another, ability to detect an
DH>attempt to communicate by a second aircraft is also valid.

Direction Finding is seldom used by any aircraft other than VOR or TACAN (or GPS now), none of which require a "loop." Any RF carrier may be DFed by a specific searching receiver...such as ELT search receivers.

The most valid reason for retention of the present airways comm is that IT DOES NOT NEED TO BE CHANGED. This isn't a topic such as code-test versus no-code-test. Had FM been found to be more efficient in the 1950s (it was already well known in labs in the 1940s), then airways comm would have been set at FM. Old ARINC documents can tell a better story.

It depends on what locality you reside and to which cities
you are referring to.

For most Ohioans: Lima, OH is pronounced, "LIE-MAH"
But they do refer to Lima, Peru as, "LEE-MAH".
Eastern Ohioans and Western Pennsyvanians, pronounce
Vienna, Ohio as, "Vy-EN-nah".
However, they do refer to Vienna, Austria as, "Vee-EN-ah".

Dave, thank you very much for your excellent reprise. Flames? NAW,
for such well based commentary! You bettcha, I'm sure many of us
appreciate your good work in Tempe. Yeah, also the description on the
close liassion between the city fathers and ham radio.

Many words have been voiced on the "boatanchors" issue which now
should be laid to rest. I hope. For those that I have sent of an
apparent offensive nature, I apologize. It's clear that I "assumed"
too much!

What I said brought me two _virulent_ flames by private message and
one public. Disheartening but best ignored in my view. It is the
way with some myopic people.

I sure hope the "proofing" of your Tempe system has worked well.
Take care,

>

Sorry to nitpick on an excellent summary on packet radio, but what are
NAK frames in AX.25 ?

NAKs (or NAK frames) are usually used in wire protocols with only two
partners, where the receiver implicitly knows who is the sender and
thus it is safe to send back a NAK. However, in cases when there are
multiple stations on the same wire (multi drop) or on the same RF
channel, the receiving station must know for sure that the message was
intended for it and it must also be sure who was the sender before
sending a NAK. This can be done safely only if there is a separate CRC
for the header indicating that the header is OK (and the error was in
the data part). Unfortunately, AX.25 does not have a separate CRC for
the header, so we do not know if the error was in the header or data
part and we do not have a valid return address.

In AX.25 (and X.25 from which AX.25 was derived from) the sender
inserts a frame number into frame and only waits a specified amount of
time for a positive ACK for the same frame number (or higher number if
multiple unacknowledged frames are allowed). If the positive ACK is
not received for whatever reason (lost during transfer to receiver,
CRC error at receiver, ACK frame lost, ACK frame contains CRC errors
etc.), the data frame is resent after the timeout period.

Kurt,

Same here. Since I had a tech license at the time I didn't miss the two rules questions. The filter the pro code folks wimper about is intended to keep technically competent folks out so the beepers don't have to be embarassed by how far they have fallen behind the state of the art. Just look at how Len and Carl are treated by these Neanderthals both have impressive technical credentials and are subject to continuous abuse for the high crime and misdimeanor of not supporting code testing.

The code hazing was the only thing that kept me out of amateur radio for 30 years, and it is what will eventually kill the hobby. At that time the beepers will proudly say to each other (over the internet) "Well we kept those no code riff raff out." The fact that they no longer have a play ground to be bullies in will be completely lost on them.

Those of us who live close to the prime mover in this would love to do
something about it but with the FCC unwilling there is little to do.
The fellow in question has repeatedly threatened to shoot people near
his house. After the Oklahoma City boming he advocated "putting to
fertilizer under Ol' Slick" nothing happens. He has on occasion had his
REA (power) poles cut down in some sort of local dispute but he just
keeps comming back on. Perhaps he has that little pink rabbit from the
TV out at his place. When I get a chance I will go out his way and
publish complete directions to his house along with a Lat/Long from the
GPS.

BTW Lee he is in central New Mexico though he sounds like he is from
Texas. I believe originally he came from Texas or Oklahoma.

Interestingly he gets his mail in a town about 10 miles from where he
lives and the Postmaster in his home town doesn't know who he is. I
don't suppose he is trying to hide do you?

I notice Jeff still hasn't explained where he got this number
of 6,000. If it is accurate, and I think it is low by at least
an order of magnitude, then it represents 1.4% of the US amateurs
licensed for 75m and 20m operation, not the less than 1% he is
claiming (there are roughly 420,000 US amateurs who are General
or above). But tuning across 75m any evening will show you that
the percentage of operators *on that band* who are misbehaving
is far greater than 1.4%. Yet all of them have passed at least
a 13 WPM test. We know that because most of the idiots sign
their calls at one time or another.

>But to see the code filter in action, tune down to where the
>code is being *used* - you won't hear any of the nonsense that
>occures in the voice portions of the bands.

This is a facetious claim at best. Of course you normally
won't hear music being played, nor will you hear belching
or strings of profanity (though it *does* happen occasionally
when someone illegally operates SSB in the data segments).
But you will hear psychopathic Morse operators swishing carriers
across on going communications. You will hear strings of dits
being sent over on going communications. And you will hear
things like FU FU FU being sent over on going communications
by unidentified Morse operators. (Morse has such low throughput
that Morse operators have had to invent their own prosigns
for swearing.) If you are a digital operator, as I am, and
are thus plagued by Morse operators in the data subbands,
you've heard this time and again.

OTOH, on VHF and UHF, where 700,000 US amateurs may operate, including about 280,000 who have *not* passed a 13 WPM Morse speed test, the problems are markedly less. With rare exceptions, you don't hear the intentional jamming and long strings of profanity on VHF and UHF that you hear routinely on 75m (and when you do, it often turns out to be a longtime higher class amateur who is doing it). It is incredibly rare to hear music being played. Etc. The main reason for that is local amateurs soon hunt you down. You do hear a number of stations using non-traditional amateur procedures, and expressions brought over from land mobile or CB, but they aren't doing it with malice, and aren't harming other operations.

There is solution to the gross problems we face on HF, and to a much lesser extent on VHF and UHF, but it has nothing to do with Morse code speed tests. That solution is vigorous enforcement of the regulations. Since the FCC stopped actively monitoring amateur bands and stopped enforcing the regulations, these problems have grown progressively worse.

Code tests, or lack of same, has nothing to do with this. A large majority of the troublemakers have passed a code test and have been licensed a long time. It is the knowledge that *nothing will be done about their behavior* which has emboldened them and caused them to act up without fear.

The same thing happened with CB. When enforcement stopped, in the early 70s, the problems grew out of control and we got the mess that everyone bemoans today. Well, we've now seen 5 years of virtually no FCC enforcement on the amateur bands, and as with CB, behavior is deteriorating as our amateur sociopaths have learned that they can do as they please without fear of consequences.

It should be noted that amateur radio has long had a disproportionate share of socially maladjusted people who must hide behind a radio to interact with others. But they have for the most part been kept in line by local peer pressure and the threat of FCC enforcement action. That threat is basically gone now, and more and more of them have become aware of that fact. This is particularly true on HF where local peer pressure is much less of a threat, IE where it is much less likely that several pickup trucks filled with angry amateurs with DF gear will show up in your front yard.

If you want to clean up the HF bands, forget Morse Code tests, they have no positive effect on amateur behavior (in fact it can be argued that they serve mainly to select for the sort of anal retentive social misfits who are causing the bulk of our problems), concentrate on getting the FCC back to doing its job instead. *That* could make a difference.

We all know the FCC has abandoned its, mandated by law, role in this area. So after filing a complaint with the FCC, follow up with a call to your US Representative's office complaining that the FCC is refusing to perform the duties it is required by law to perform. If enough amateurs do this, we may get some action. In politics, the squeaky wheel gets grease. If we squeak loud enough to the right people, we can get something done.

Hi John, Avery also sells a peel-off adhesive letter-size paper.
What I do is create four QSLs per page, trim them to size, peel
off the protective layer, and attach them to standard pre-stamped
US postcards. Works Great. Cheaper than the postcard stock.

Well, if you listened to HF on your day off from work, who are you going to hear if they are not retired? Not many other working hams took the same day off and happened to listen to the same HF freq and decide to CQ and you hear him.

I don't have SSB here, only CW. And I use a southerly oriented "wire beam" now instead of the 70 ft end-fed long wire, so the chances of us connecting on the air are nil.

The only question I would pose is why you hate hams and ham radio so much. Do you also despise SWL and CB people? How about coin and stamp collectors? Computer hobbiests?

Burt, if you feel so strongly in your convictions against ham radio, try to make changes in those areas you find fault. How about running for a position with the ARRL? I think your chances of getting elected are quite good, given the email support you receive.

Just sitting back and complaining makes you sound like one of those small yapping dogs. And remember, letting your blood boil rather than taking physical action isn't good for one's health.

Jeff

Hi Jerry - This is the second time you've publicly doubted my ability to copy code. Last time I recall you did apologize. So, how about next month, when I'm back on the Mainland, I find and send you a copy of my US Coast Guard code certificate? It should mention 22wpm coded groups, and 25wpm plain text; it's from 1976, but that shouldn't matter.

Last year you accused me having a phoney callsign, now it's the code again. You've really got to get over this fetish you have for me. Get yourself a girlfriend (or boyfriend, or dog or cat) so you can put behind you this crush you have on me.

Derek, (and I mean this in the nicest way) you are full of it...

420-430Mhz is used for FM links in a lot of major areas...also the MIR and RS FM rptrs are in the 430-440 range......Canada has NO 420-430 use and MUST cram everything into 430-450....including packet, etc....

Legit use below 440 for FM HTs. etc? YOU BET YOUR ASS THERE IS!!!

You need to know THE band plans....

Keith, just stop whining (spelled correctly) and learn to use a call
book before you insult someone, you jerk. No one has been stupid enough
to publicly make an incorrect assumption about my license class in a
long time, thanks for the opportunity to publicly make a fool of you.

BTW reflex response to aural stimuli has very little to do with
intelligence. I do like the mix of ebonics and surfer talk however.

Jerry

I assure you he does not need Hawaii for WAS and if he did I would work
him when I was out there myself. No he is an avid CW operator and has a
real problem with the demeaning way the anti-code-test people are
treated on the newsgroups. He supports CW as a mode by giving one of
the best how to learn CW presentations I have ever heard. We often have
forums at the same hamfests so I have heard it several times. His
gentle encouragement did a Hell of a lot more to motivate me to upgrade
than all the BS that shows up here. Anyhoo I've been getting a little
nasty to you lately so I will back off. BTW don't sell your wires short
I've WAS on 80 with an EW wire dipole and nothing else. Heck I work
Hawaii on 20 all the time from my truck. None of the guys I've talked
to know you, but there are a lot of folks there.

This may open a can of worms, but you might also want to contact
your city or county property office. As strange as it sounds, here
in the City & County of Honolulu, a home-owner cannot do *any* type
construction or modification to his property without taking out
a construction permit (the newspaper ran a story of someone who
replaced his toilet by himself - somehow the C&C found out and
cited him for not having a construction permit).

Another activity below 440 is the downlink on AO-27. A number of us
regularly give satellite demos using this bird with a dual band HT and
a hand held Yagi. It's a lot of fun to show folks something new like
that and renew their enthusiasm for the hobby.

SB DX @ WW $OPDX.299
Ohio/Penn DX Bulletin No. 299

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 299
BID: $OPDX.299
April 7, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KE2LJ, W3UR & The Daily DX, N4AA & QRZ DX, N4UQM, AC7DX, W5IJU & Island/DX News, EA2CLU, G4BUE & DX News Sheet, G0WMW, HA0DU, LU6EF, ON4BAM, OZ8ABE, URE EA DX and VK4AAR for the following DX information.

3A, MONACO. The "DX News Sheet" reports the special event station 3A7A will be active April 15-30th. The station will be active all on bands/modes to celebrate 700 years of the Grimaldi Dynasty. QSL via bureau.

3B, MAURITIUS. Kenton, NK6F, will be visiting 3B8CF and plans to be active from his QTH as 3B8/NK6F. Operations will be from April 20th to June 8th, with activity mainly on CW. QSL to home call.

3C0, ANNOBON ISLAND. A DXpedition is being planned for next May. The URE (The IARU National Society) is coordinating through the URE EA DX. The operation will use three complete stations (plus some other back-up rigs) with linear amplifiers. The dates of activity will be from May 20-27th. Operators will be: EA3AOK, EA3BT, EA4BPJ, EA4BT, EA5AD, EA5GRC, EA6BH, EA6WV, EA7BJ, EA7JB, DJ9ZB, EA4BQ/OH0XX, EA8AH/OH1RY and W9EVI. QSL via EA4URE. Their budget has been calculated to be 45,000 U.S. green stamps, so the team is looking for contributions. Two planes will be loaded for transportation of operators and material to the island. Any questions about this operation must be sent to: hf@ure.es. They plan to have more information available via their WEB-site. The URL address is: http://www.ure.es/3c0dx.html.

3W (XV), VIETNAM. Activity continues regularly from here. Nick, 3W5FM, can be found usually before 1130z on 40 meters (around 7005 kHz), working Japan and east coast U.S. stations. Then after 1400z on 30 meters, Nick works the west coast U.S. stations on 10101 kHz. Nick does not leave Europe out, between 1530 and 1730z, he can be found on 14009 kHz working Europe on 14009 kHz. QSL via UA0FM. If you do not have any luck with

Nick, look for Rolf, XV7TH, just before 1530z on 14195 kHz usually listening up. QSL via SK7AX.

3Y, BOUVET (DXpedition delayed). The 1997 SSIDXG operation has been delayed until December, 1998, on the authority of the Norwegian Polar Institute. The Convention of the Conservation of Antarctic Marine Lining Resources (CCAMLR) is establishing an ecosystem monitoring program and permission to land has been revoked until a management plan is in place. The Institute's concern is that all activity will disturb the environment to some degree which might cause an unacceptable impact on the monitoring program. Tony, WA4JQS, and Barry, ZS1FJ, are continuing their efforts for this and other operations.

6Y, JAMAICA. The "Island/DX News" states K6JAH will be active through April 13th. The callsign was not given. Operations will be on 40-10 meters with some RS-12.

7O, YEMEM. Steve, HA0DU, reports Zoli, HA5PP, told him he wil be stationed in Aden, Yemen starting in May for a longer period of time, probably a year or so. He is going to try to get permission to operate from Aden, and he will do his best to make his license approved and confirmed by the authorities in Sanaa. Zoli has been successful in the past to secure licensese in Vietnam (3W8DX) and Laos (XW8DX) when it was extremely difficult, so KYFC. His call sign will be published later. He is planning to come on the air in late June. From Aden, he will be making several "side trips" to other countries (E3, T5, ST, ST0 and J2).

8Q, MALDIVE ISLANDS. Juanjo, EA2BP, and Jose, EA2CLU, will be active from May 4-14th, using the callsigns 8Q7BP and 8Q7LU respectively. They will active on all bands SSB/CW, maybe also RTTY. The QSL routes are via home calls. For more information, send E-mail to Jose, ea2clu@ctv.es.

ET, ETHIOPIA. "The Daily DX" reports ET3SID was heard on 14082 working Europe and east coast U.S. stations on RTTY from 1230-1330z. Afterwards he went to SSB on 14284.

IOTA NEWS.... Maurice, ON4BAM, announces he will activate three IOTAs while on holiday with his family. Planned operations will take place July 19th to August 9th, using the callsigns GM/ON4BAM/p and GM/ON4BAM/m. Activity will be on the IOTA frequencies (highest band possible, propagation permitting). Look for him on EU-005 (mainland Scotland) during the whole period except; EU-010 (Isle of Lewis) July 31st- August 2nd (noon); and EU-008 (Isle of Skye) August 2nd (noon) - August 4th (noon). QSL is preferred via CBA (direct with SAE + postage).

KH2, GUAM. During Jeff's (N4UQM) 2 years stay here, he will be signing N4UQM/KH2. He will be active on SSB and RTTY on all bands 80-10 meters. His QSL Mnager will be Carl, WB4UBS, and his address is:
#1 Sweet Bay Drive; Columbia, SC 29209.

KH7K, KURE ISLAND. It has been announced Art, N2NB, expects/plans to operate from Kure from May 17-23rd. It will be a one-man show at this

point. Equipment is an IC-741, A Centaur amp, and an HF9VX, vertical for 160-10 meters. He will try to set the antenna at the waters edge if possible. The expected callsign will be close to KH7K/N2NB. QSLs to NW8F. Art is an employee of a Federal Agency of the U.S., and has had favorable discussions with the Coast Guard, and OTHER necessary agencies. Let's wish him luck.

PIRATE ALERT! A station working as OH0/OZ1WF is a pirate. The real OZ1WF has not been active on HF for years. OZ1WF has received a lot of direct QSL for this operation and he will be sending the cards back. The slim often operates on 80 and 160 meters.

QSL INFO AND NEWS......
NEW QSL MANAGER. Ron, AC7DX, informs OPDX that he is now the new QSL Manager for AH8A. His InterNet E-mail address is: ronlago@efn.org. His snail mail address is: POB 25426, Eugene, Oregon 97402. All QSL direct ONLY.

Bernard, DL2GAC, who has been active on Tuvalu (T22MS) and Solomons (H44MS), wants it known that the CORRECT address to QSL is printed only in the 1997 International Callbook. In previous years the address was for his father's address which will get to him anyway, but the CORRECT ADDRESS is: Bernard Stefan, DL2GAC, Moggenweilerstr 18, D-88677 Markdorf, Germany. However, he prefers the bureau because the postage required is two U.S. green stamps or 1 IRC. By the way, he is preparing to leave Tuvalu for Fiji and then on back to the Solomons.

Raul, LU6EF, GACW's QSL Manager, is glad to report all LU6Z QSL cards have been answered, either via direct or via bureau. He reports there are some problems still happening with some individuals, who are asking second or third time for cards. For these people, Raul states, "Please DO NOT SEND MONEY OR COUPONS AGAIN, we do not expect to make money from you, so only a card and self addressed envelope is OK."

TN, CONGO. Begin looking for Piero, IK2BHX, who is currently active as 9Q5HX for six months and hopes to be active from here. There is no report on what callsign he will be using. QSL via IK2MRZ.

WORLD'S FIRST EVER DX! Commemorating 100 years of DX (since Marconi's first contact between GW and G on 18 May 1897), "Weston-super-Mare RS" has now finalized details allowing an operation from Brean Down, the location of the original G station. The "SPECIAL" callsign GB100BD will be on the air May 17 and 18th ONLY, along with Barry ARS's GB100LP and GB100FI operations already announced. QSL information: GB100BD via RSGB BUREAU ONLY and GB100LP and GB100FI via Glyn, GW0ANA. Glyn will also handle requests for certificates, available for working any two of the special event stations (certificates will be specially endorsed for those working all three). ADDED NOTE: Just a reminder, that the "10th International Marconi Day" takes place April 19th. Some details on stations and other activites will be listed in next week's bulletin.

JH>From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
JH>Subject: Re: Question about aircraft using AM instead of FM

JH>Gerald Schmitt <kc5egg@ix.netcom.com> wrote:
JH>>holford@cnwl.igs.net.nospam (D. Holford)

JH>>>the presence of a carrier for DF is another,

JH>Radar is quite useful for that purpose.

Radar is looking for its own transmitted pulse reflection; it has no discrimination on targets without some augmentation such as a transponder. ANY RF carrier, CW/AM/FM can be DFed with the proper receiver-antenna.

JH>>>As ex military aircrew and military/civil Air Traffic Controller
JH>>>I can vouch for the fact that hearing a second, weaker, signal
JH>>>acknowledge the same clearance is a definite plus for AM.

JH>Again, my only comment (that began this portion of the thread)
JH>was that with SSB, a second station can also be copied. SSB affords
JH>more sensitivity over AM.

Sensitivity is not an issue in the airways VHF or UHF environment when the line-of-sight can be 100 NMI (dependent on altitude). Those with any slight experience in listening to a busy airport's tower and aircraft conversations will notice that there are FEW heterodynes. Pilots and tower personnel keep conversations brief and to the point. Pilots generally LISTEN before transmitting; they are too busy with pilot tasks to do ragchewing on a radio. To most pilots, a radio is just a tool of communications essential to flying airways. There is little "vitality" (stated below) in "determining that two stations are transmitting simultaneously." Controllers understand when two stations are transmitting simultaneously and report that back to the last aircraft worked (usually); the second aircraft will pause and wait their turn.

JH>The AM heterodyne tone will only exist if the two signals differ in
JH>frequency. With today's radios, you shouldn't count on that tone
JH>even being produced.

Really? How do beeps happen? AFC on SSB is possible without a pilot carrier tone, but it involves a lot of extra circuitry which may not work with all speech input and does not offer that much advantage. Pre-WWII multi-channel SSB used pilot tones for fixed point-to-point circuit AFC.

JH>Hi Jerry - As you well know, my training was in maritime communications.
JH>All I originally said was "SSB would serve that same purpose" in regards
JH>to someone saying AM was vital for determining when two stations were
JH>transmitting simultaneously. And again, the (AM) heterodyne note will only
JH>exist when the two signals differ in freq'y. (Think about how your receivers
JH>operate: The IF mixes with the signal in the front-end to create hetero-
JH>dyne products; if the IF oscillator and front-end were on the same freq'y
JH>no other frequencies would be produced.)

Poor explanation within parenthesis as well as incorrect. "IF" is
the Intermediate Frequency in a superheterodyne and, if the superhet
is functioning properly, does NOT "mix with the signal in the
front-end." The IF is the _result_ of a sum or difference between
incoming signal and the Local Oscillator or LO at the output of the
mixer. Heterodyne products are created by non-linear circuits such
as mixers and detectors. An audio-range heterodyne happens when two
or more IF signals are spaced in frequency by an audio-range
increment.

I enjoyed your reply. It give me the chance to how easy it is to make folks angry. Making folks angry is not my objective. My objective is to try and understand why the no-code folks are so uptight about code. Don't let it be a road block to something that they want so badly. The energy spend fighting over the code is enough to learn and pass the code.

BTW Jerry, are you attempting to impress someone with a few words that you had to look up in the synonym dictionary? I am glad you know how to spell

Take a chill pill dude!!!

Since this is one of the longer threads I'll add my two cents.

First of all when QSLing I think you must think about the recipient.

Is this someone who is just collecting points on a net like 3905cc or

10-10 or is it a DX station that you had an enjoyable contact with?

If it is just a net contact there is nothing wrong with a cheep homemade

card. I've seen many of these that were quite well done. However if

you want a card from a new country or rare IOTA then I suggest spend a

little to get a decent, professionally made, card. Weather or not you

like it, your card says something about you. Unfortunately a lot of hams

cards say CHEEP! Don't expect to get a nice card in return if

you'er a cheepscape. Also, I don't care how well you brewed your card,

if it's printed on regular paper, it says CHEEP! Use card-stock.

I have two sets of cards. One inexpensive set made by wx9x for my net contacts

(and the ievitable California QSO) and another full color set by Vi-Con that

costs a bit more, but I'm not embarresed to send it out for DX contacts and

memorable QSOs.

Look, you've spent hundreds, maybe thousands of dollars on radio equipment so

don't be a cheepscape when it comes to QSLing. Make a paper chaser happy.

73, Duane

http://www.qrz.com/cgi-bin/qrz_gifs?n0ze.jpg

BTW: I already know what a poor speller I am. You don't have to tell me.

Thanks for the reply. I did remove both batteries, ie. main and lithium backup, before trying the reset. Unfortunately, it didn't help. I've tried everything that has been documented in all the mods files, my only thought is perhaps other jumpers. Any ideas?

Thanks for the reply, but already tried it. Mine came standard without 15,
so I had to put it in. I have checked it, and it's fine. Any other ideas?

Apparently more than yours told you about doing your home work. Do you
yet understand what class of amateur license I hold?

The attitude you displayed at the start of this thread demonstrated
exactly what is wrong with amateur radio in the US today. The
"incentive" license structure has led to code snobs who think because
the worship at the altar of Morse that they are somehow better that
other people. In your case the condition is particularly advanced. If
someone makes a comment that triggers the "wants something for nothing"
response you launch into the retoric. In my case the "just learn the
code retoric" was rather stupid since I hold an Advanced Class license.

The most telling comment though was when you accused me of using a
synonym generator, talk about the dumbing down of amateur radio. I'm
sorry if my everyday vocabulary sends you to the dictionary try and
think of it as a learning experience.

Jerry

Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc

From Ham 'Accessories to Zones' the DX Reference Guide has expanded to
60 pages and 1277 links. An index is now available for quick clicking to
the subject desired.

The Technical Reference Page now includes links to Amplifier Theory,
SWR, S-Units, dB tables, Antennas and much more.

The origin of '73' and the term 'Ham' are covered along with some
dubious humor and links to a list of 'Famous Hams'.

DXpeditions past and future are summarized and linked.

An extensive search came up with around 40 ham and electronic kits,
components, and circuit boards for homebrew projects.

The Mega-Prefix list covers the weird ones and new UK calls.

>ARRL has substantial input regarding the FCC's stewardship of amateur
>radio in this country. Anyone who reads QST cannot doubt that the
>discussion that takes place on this forum has had an effect on ARRL.
>Why do you think they have started addressing the issue. I don't think
>it is because of the trickle of letters they get to QST.

I agree, in part; the ARRL is not addressing this issue solely because of the letters written to QST. It is because of the communication our Division Directors and Vice Directors (and others) have had with hams over the years. The Directors are available by telephone, email, US mail and in-person at hamfests, conventions and at local club meetings throughout their Divisions.

Hans erred in the use of the word "never." He is making a good point, though -- if you want to ensure that your input is heard, make it directly. Posting your ideas to Usenet will not ensure that they are seen by those "in power," to use the phrase at hand. I know that a number of ARRL Directors and at least a few at the FCC do NOT regularly read rec.radio.amateur.xxx. Only a percentage of HQ staff regularly visits this formum, and those who do use it do NOT read every post on every thread.

Please, offer your input directly! I have talked to one Director who told me that he has heard from only 50 people in his Division about the current license-restructuring proposal. He is quite computer-oriented, so he has probably seen some of these discussions, but the Board has a goal of bringing the views of the members (and "prospective members") from their Division to the table. Take it from an "insider:" the Board (at least as a collective body) has not made any decisions on how to proceed. Most of the Board folks I have talked to would like to see a mandate from the members on this issue and most do not feel that they have received enough input. Read the article in the March QST and email, write or call your Director and tell him or her what you think,

>I have had discussions with one Director and one Vice Director regarding
>Morse Code testing. These discussions were a consequence of comments
>made by myself and others on this forum.

Perhaps so, but then again, either you or they turned it into a discussion. :-) But one cannot count on one's Director seeing the post, so it is much better to make the communication directly.

Yes, thank you John but it is funny because "M'aidez" is not very good French. It should be "Aidez-moi" or, more common, "A l'aide." In fact the only way to say MAYDAY in French would be in the sentence like:
"Voulez-vous m'aider?"
So, maybe MAYDAY was invented by a Briton or a Yankee not speaking proper "froggy" :-)
No, I think that MAYDAY became the international distress call because it is short, easy to prononce, distinctive sound in bad conditions, and ... got the French to believe they also had something to say!
Notice that PAN PAN also comes from the French "une panne" (a breakdown)

By the way: I am Norwegian but born as a French-speaking Belgian.

Man-o-man ... learning Japanese can be REALLY tough though. I struggled
with Latin in high school and forgot everything...EXCEPT, studying
Latin (or any language) will force you to have a better understanding
of grammar in your own language. It certainly helped me.
As for Japanese, unless you are willing to virtually make a lifetime
commitment to studying the language, I would say "don't bother".
A good job, IF you are interested in Japan and doing business with
the Japanese MAY be possible. It certainly made my life more
interesting.

Well, what I meant by *check* was to make sure you should have jumpered
15 at all. I did this mod at work, and I have my documentation there,
so tomorrow I will double check. But, this is what I remember about
it: You only remove 13. 15 is already open, and this open jumper is
what allows you to do the keyboard mars/cap mod (TX 140-150). My
recollection is that jumpering 15 will eliminate that keyboard enabled
mod and in fact hard wires you to the ham bands only. I will follow up
on this tomorrow mid morning eastern time.

I think we should this concept one step further. Why stop at Japanese. We have access to so many countries through internet, why not get some practice in some languages other than English. At least enough to have a basic QSO, and then take it from there. In a couple of years, the sun spots will be back and there will be world wide propagation almost 24 hours a day. Just think, between flames, we might actually be able to use this newsgroup for something constructive.

Jerry, it is apparent you feel that code is a useless method of communications. It is ok for you to feel that way.

It still does not change the fact that it is a requirement for getting onto HF.

My point is for those that have not passed their code YET, to stop whining pass the code and then put it in the closet. Then they will have all of the HF bandwidth they want.

Just that easy. I think the engry that most folks waste fussing about the things they don't want to do is a shame.

I don't use my code. I passed my code to get HF. I will most likely never use it again. But, I don't use PACTOR either and I had to answer questions about it in order to pass my exam.

I don't plan to contine explaining myself to you anymore. Congrats on the Advanced ticket. You passed your code apparently because you wanted something....my guess is HF access.....let's see could the others do that as well?

Good Luck to you in your efforts to open the HF airwaves to those too lazy to put forth enough effort to pass the code.

Happy RFing!

Have a nice day!

468. HF Linear for sale

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-07 00:00:00 UTC
From: Larry Menzel <lmenzel@millcomm.com>
Message-ID: <334982C6.5903@millcomm.com>
Source record: 200798
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have a very nice late model SB1000 HF linear amp for sale. I have purchased a new amp, and would like to find a good home for this one. In the event you're not familiar, the SB1000 is the Heath version of the AL80A. The amp is clean and the tube is bright. Adequate power supply and delivers 850+ watts on 10-160 meters (actually 1kw on 40-160 CW). Very linear and clean. I also have a qsk board for it for an extra $75

Specs:

Late model run, very well built by extra class fussy ham
Clean. A very few minor scratches on the top...screw on my watt meter did it.
Single 3-500 Eimac tube
10-160 operation
Can UPS ship but prefer location within 100 miles of Minneapolis
You pay shipping if you're out of this range...I'll pay to package it well.
All documentation, including building specs and instructions.

This is really a nice amp for new ham or for cramped quarters. Runs on either 120 or 240 volts.

Email me if you'd like to talk further.

Then again we have an example of what happens when bands are
given to those that have passed the code test.....20m, 40m, etc.

It's pretty hard to tell 11m from 20m from 40m. What's your
point?

In the opinion of every other service too...that's for sure.
The Frech maritime service is shutting down its CW
ops soon now too. They only logged 100 CW messages
in all of 1996 and the last emergency SOS was
recorded in 1990.

Hi Walt -- you are the first in 6 months to note this. These were taken
from one of the widely published Ham magazines (name omitted). I would
be most happy to correct them if you can supply the correct information
or tell me where they can be found.

Any help would be appreciated.

>>What does anyone think of the new dual bander from Rat Shack?

As we've been stating for over a month now...it's a great little unit.

But about a hundred bucks more than the ADI AT-600, though...and the
ADI has a couple additional features over the Radio Shack unit.

I bought a speaker/mike and a MAHA NiMH second battery with the money I
saved purchasing an ADI versus the Radio Shack unit....

Oooops .. you stepped in it there (or maybe it was intentional?)
In case you *didn't* know, Jeff is a "teacher" (of sorts) too ...
he's (according to what I've been told) a teaching assistant
at the U of H, where he's been working on his degree for about
10 years (4 years or so is normal, I'm told) ... maybe it has to
do with the fact that he can't convert Watts to dBm without
coming up with an answer that's off by 60 dB ???

First, "Ham Radio is CW" is so demonstrably absurd that if
you really believe that you're such an idiot that there's no point
in trying to discuss anything with you (a conclusion that I've
already reached by watching your cretinous comments over
the past few weeks ..)

However, just to set the record straight, I haven't "whined about
my 'inabilities' " ... I've complained about the current backward,
counter-productive rules and regulations promoted by the rabid
beepers and the ARRL and advocated the change and
modernization which are necessary to secure the future
of ham radio, which is in serious jeopardy of being completely
eliminated in the coming decade or so ...

If you don't like my posts, don't read them, but DO NOT
presume to silence me ... that's not within your rights or
priveleges ...

Roland, you twit ... it is NOT a proposal. Microsoft has asked for no such
thing. Bill Gates (personally, not through Microsoft) is a primary
investor
in Teledesic ... who already HAS their license for the freqs they requested
in the higher microwave region, and NOT ham bands) ...

I know I'm asking something completely beyond your capabilities, but
please,
please *try* to have some clue about what you're talking about before you
go
and open your stupid mouth ... spreading misinformation (which seems to be
your major activity) is a disservice to both the individuals who ask
questions
and to the ham community in general ...

Well, let's do some arithmetic. Since the problems seem to occure
on 75 and 20m, we're looking at 250 kc and 200 kc, respectively,
for phone - a total of 450 kc. One percent of the total licensees
amounts to more than 6K, but to be fair, let's use your figure
of 420K for HF-licensees, so that 1% will be 4200 ops. Let's suppose
each QSO has say, 3 ops, so now we have 1400 simultaneous QSOs spread
out over 450 kc. This amounts to 3 QSOs (a total of 9 ops) for every
1 kc. (And I've been generous in allowing 20 and 75m to be active at
the same time.) Since this is impossible, the abusers must total
less than 1%.

>>But to see the code filter in action, tune down to where the
>>code is being *used* - you won't hear any of the nonsense that
>>occures in the voice portions of the bands.

>This is a facetious claim at best. Of course you normally

>being sent over on going communications. And you will hear
>things like FU FU FU being sent over on going communications
>by unidentified Morse operators. (Morse has such low throughput
>that Morse operators have had to invent their own prosigns
>for swearing.)

Want to do some more arithmetic? Let's suppose the bad code ops amount to 0.1% of all HF licensed ops; that would be 420 folks sending FUs and swishing carriers and sending strings of dits. Let's pick 40m now, 7000 to 7100 kc. So nightly, that would be about 4 lids every kc sending FUs, swishing carriers, and sending strings of dits. That would make 40m completely unusable, which is not the case. Even if we spread those 420 rotten ops out over both 40 and 80, there'd be two pests every kc. Anyone with a receiver will know that doesn't happen. Hence, the code lids must amount to less than 0.1% of all HF licensees.

>If you are a digital operator, as I am, and are thus plagued
>by Morse operators in the data subbands, you've heard this time
>and again.

Hmmm, I thought digital comms got through no matter what. Data subbands? 7040 kc has traditionally been set aside for very low power code, but since you and your friends are now using it for your digital work you need to expect some QRM; but that shouldn't bother your superior mode, right?

Why are you digital ops creeping towards the lower band edges? Why not share a single channel - your digital modes are capable of doing that, correct? You folks attempting to squeeze out the code ops is comparable to the bad behavior you complain about in the phone regions.

73, Jeff KH2PZ

If I may conjecture a possibility of why he won't. Do not forget Burt
is a teacher. How many teachers today are willing to work hard,
period? Its SO much easier to sit around and bad mouth something
rather than try to make it better. If Burt were to put HALF of the
effort he has in badmouthing things (and if he had half the knowledge
he claims) then some improvement in things would be inevitable. A
teacher of all people should know the way to c change things is one
person at a time.

>Nope, the Dick Bash books covered the written part of the exams only.
After I took my extra at the FCC office I remember Dick Bash
standing in the hallway asking people if they remembered any ot the
questions. A couple of days later someone lent me the code tape and
book, and I was amazed at the accuracy of both. Just about all the
theory questions and answers were in the book practically verbatim,
and the code included the exact passage I was sent, with the right
answers. The dumbing down of amateur radio started way before the VE
system..

Sorry if I sent you to your dictionary, I forgot I was dealing with the
great unwashed. And some people don't understand why cousins should not
marry.

Let me explain this in small words that even you can understand.
I have learned Morse Code. I have been tested on two occasions. At both
of these testing sessions I passed both by the questions and by the one
minute of copy. If that is too difficult for you perhaps a no code tech
with some education can explain it to you.

>
>Take a chill pill dude!!!

Take your foot out of your mouth and buy a new call book.

Present and past members/operators of the Dhahran Amateur Radio Club are seeking verification of the earliest received HZ1AB QSL card. If you such a jewel in your collection, or know someone who has, please contact me with details. A photocopy would be appreciated.
We are trying to determine what the 50th anniversary of the call is. We believe it was 1947, but some records have been lost with the many moves the station has made at Dhahran Airport.

Any information will be greatly appreciated.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* What is an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* How may I contribute to the Elmers List?

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I

really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the

novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of
rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

Amateur Radio: Elmers List Subject Quick-Search Index

------------------------------------------------------------------

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

10-X INTERNATIONAL

* Forman

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)/SKYWARN

* Adams, I (ARES and SKYWARN)
* Ammar
* Avnet (Fountain Valley, CA RACES)
* Ayers (RACES and SKYWARN)
* Boccardi (ARES/RACES/SKYWARN)
* Brown (Collier County, FL ARES EC)
* Buck (Hawaii)
* Choate
* Colwell
* Czaikowski (ARES, former VA RACES Radio Officer)
* Forman (ARES/RACES OES)
* Gray (Arkansas Section)
* Hendershot (Josephine County, OR, Asst. EC)
* Humphries (ex-Asst. EC)
* Johansen (ARES)
* Johnson, D (RACES and SKYWARN)
* Kruml (City of Redmond, WA RACES Radio Officer and Community
Disaster Educator, EComm Pacific Northwest ARES Internet Mailing
List)
* Mello (SKYWARN)
* Moell, A (Hospital Disaster Support Communications System and WWW
Page)
* Morgan (ARES and SKYWARN)
* Morris (ARES)
* Neeson
```

* Nickolaus (Dakota County, NE EC, Siouxland area SKYWARN spotter network)
* Paperman (ARES TX DEC)
* Patton (Commanche, TX, ARES EC and RACES EC, SKYWARN)
* Richardson, G (ARES)
* Richardson, W (ARES/RACES)
* Riddell (Kentucky)
* Rodriguez (ARES/RACES, Mexico)
* Rymell (Assistant EC, Radio Officer and Chairman of Operations Committee for Lycoming County ARES/RACES/SKYWARN)
* Smith (ARES and SKYWARN)
* Sohl, R (ARES/RACES)
* Winchell (ARESMAT Team Captain, RACES Team Leader, and SKYWARN NCS)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Bauer (VP for Manned Space Activites, Chief Member of SAREX Working Group, NASA/SAREX WWW Page)
* Boudda (Morocco)
* Di Mattia (Italy)
* Gunton
* Marchant
* Richardson, G
* Sohl, R
* Williamson (WWW Page, Anonymous FTP Archive, and Mailing Lists)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO (PACTOR)/RADIO TELETYPE (RTTY)

* Aerts (PACTOR)
* Di Mattia
* Forman
* Hendershot
* Leavey (73 Magazine RTTY Loop Column and WWW Page)
* Neeson
* Nickolaus (RTTY)
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Richardson, G (RTTY)
* Richardson, H
* Short (BitBucket Specialized Techniques Mailing List)
* Sohl, R (AMTOR)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and Dealers Section)

AMERICAN RADIO RELAY LEAGUE (ARRL) FIELD ORGANIZATION

* Brakob (Dakota Division Vice Director)
* Brown (Collier County, FL EC)
* Cira (Los Angeles, CA ACC)
* Coffee (CA PIO and TS)
* Czaikowski (OES, Former OO/AA and VA SEC)
* Forman (Technical Specialist)
* Goldstein (Volunteer Counsel - Florida Only)
* Gray (AK SM and OO)
* Hendershot (Josephine County, OR, Asst. EC)
* Hill (TN TS)
* Kruml (Northeast King County, WA EC)
* Nickolaus (Dakota County, NE EC and OBS)
* Paperman (TX DEC)
* Patton (Commanche, TX EC)
* Rymell (Lycoming County, PA Asst. EC)
* Sohl, B (NJ Local Govt. Liason)
* Sohl, R (TX TS)
* Turner (Volunteer Counsel)
* Winchell (Asst. SEC, Education)
* Winkler (Arizona PIC)

AMERICAN RADIO RELAY LEAGUE (ARRL) HEADQUARTERS STAFF

* Bloom (HQ Webmaster, QEX Editor, ARRL CNC Contact)
* Carcia (W1AW Station Manager, ARRL Bulletin Mailing List)
* Hare (Laboratory Manager)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Tracy (InfoServer Sysop, TIS Coordinator)

AMIGA PERSONAL COMPUTER

* Morris
* Pozzi (Argentina)
* Whatton (Manager, Amiga Amateur Radio User Group and WWW Page)

ANTENNAS

* Ayers
* Boudda (HF)
* Brakob
* Brewer (wire HF)
* Brubaker (HF/Wire/Beams/Yagis)
* Buck
* Cieslak, C
* Coffee (HF/VHF/UHF/Beams/Yagis)
* Colwell (HF/VHF/UHF)
* Croce
* Czaikowski
* Danaher (HF)
* Di Mattia
* Elmore
* Emm (HF/VHF/Wire)

* Gray (MF/HF/VHF/UHF/Wire/Beams/Yagis/Mobile)
* Gunton (Microwave)
* Halbert (simple HF Wire)
* Hamilton (HF/Computer Simulation and Design)
* Harper
* Harris
* Hendershot
(MF/HF/VHF/UHF/Microwave/Wire/Beams/Yagis/Dishes/Computer
Simulation and Design/Mobile)
* Henzel
* Hill (Mobile, including HF)
* Humphries (VHF and Multi-Band Wire)
* Johnson, D
* Kolb (HF/Beams/Yagis/Mobile)
* Legary (MF/HF/VHF/UHF/Wire/Beams/Yagis/Quads/Dishes/Computer
Simulation and Design/Mobile/Other)
* Mello (HF/VHF/UHF/Wire/Mobile)
* Miller (HF/VHF/UHF/Microwave/Wire/Beams/Yagis/Dishes)
* Morris
* Neeson
* Nutter (HF/VHF/Wire)
* Ornitz (Corrosion Protection)
* Petri (VHF)
* Pinheiro (VHF/UHF)
* Placer
* Preston
* Reeves (Wire)
* Reynolds (including HF)
* Richardson, G
(MF/HF/VHF/UHF/Microwave/Wire/Beams/Yagis/Dishes/Computer
Simulation and Design/Mobile/Other)
* Rosenfeld (including HF Wire Dipoles)
* Rymell (MF/HF/VHF/Wire/Beams/Yagis/Mobile)
* Salnick (HF/VHF/Wire/Mobile)
* Schumacher (VHF/UHF/Beams/Yagis/Mobile)
* Silva
* Smith (including Homebrew)
* Sohl, R
* Stanley
* Stocking (HF/Wire)
* Taylor
* Tynkov (HF)
* van de Kerk (HF Low-Profile)
* Veach
* Warth
* Winchell (and Feedlines)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT/BOATANCHORS

* Avery (including AWA)
* Ayers
* Brewer (40's-70's and WWW Page)
* Croce
* Eisenberg
* Hamilton
* Harris
* Hendershot
* Hill (Mailing List)
* Hockaday
* Mello
* Miller
* Morris
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Orcutt
* Ornitz (Cleaning and Refurbishing Chemistry and Safety)
* Paperman (Manuals, Service Information, and Literature)
* Petri (Tube Type Radios)
* Richardson, G
* Richardson, W
* Rippel (Secretary, Collins Collectors Association, Collins Mailing List)
* Rymell
* Sohl, R
* Stanley
* Turner (including Kenwood and Ten-Tec)

ANTIQUE WIRELESS ASSOCIATION (AWA)

* Avery
* Orcutt
* Richardson, G

APPLE MACINTOSH COMPUTER

* Avery
* Been
* Boccardi
* Buydens
* Danaher
* Luszcz (Shareware, including MacMultiMeter)
* Marchant
* Morris
* Placer
* Pozzi (Argentina)
* Richardson, G
* Seney (Macnet, including Anonymous FTP Archive and WWW Page, List of Amateur Radio Software WWW Page)

BATTERIES

* Ammar
* Ayers
* Browne
* Buck
* Cieslak, C
* Eisenberg
* Gieszczykiewicz
* Gray
* Hammill (Sealed Lead-Acid)
* Harris
* Hendershot
* Morris
* Preston
* Richardson, G
* Rosenfeld
* Sohl, R

BRITISH AMATEUR TELEVISION CLUB (BATC)

* Pawson (WWW Page)

BULLETIN-BOARD SYSTEMS (BBS'S), LANDLINE

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Czaikowski
* Forman
* Hamilton
* Johnson, D
* Mello
* Meredith (F6FBB Packet BBS Support)
* Richardson, G
* Stillinger (IBBS)
* Watters

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Richardson, G
* Sohl, R (Ground/Air Search and Rescue)

COLLEGE CLUBS

* Gray
* Hamilton (United States Military Academy)
* Luszcz (WWW Page)
* Rosenfeld (former Treasurer, University of Maryland)
* Rymell (Advisor, Bloomsburg University Amateur Radio Club)
* Schleck
* Stocking

COMMERCIAL SERVICE EQUIPMENT

* Cieslak, C
* Dodell (Mailing List)
* Eisenberg
* Gray
* Gunton (including Microwave)
* Harris
* Hendershot
* Mello
* Myers (Motorola and G.E.)
* Richardson, G
* Rodriguez
* Sohl, R

CW (MORSE CODE)

* Avery
* Been
* Brown
* Brubaker
* Caserta
* Cieslak, C
* Coffee
* Croce
* Czaikowski
* Di Mattia
* Edinger
* Elmore
* Emm
* Forman
* Gapinski (VHF Meteor Scatter)
* Hall, R
* Harris
* Hendershot
* Hill (Learning Hints)
* Hockaday (including Instruction)
* Lowman
* Mello
* Miller
* Morris
* Neeson
* Nickolaus
* Petri
* Pitts
* Placer
* Preston
* Richardson, G
* Rymell
* Sawkins
* Silva
* Stern

* van de Kerk
* Veach (5-20 WPM Classes, Lawrenceville, GA)
* Warth
* Watters
* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Ayers
* Bloom
* Coffee
* Di Mattia
* Gilliver
* Richardson, G
* Short (BitBucket Specialized Techniques Mailing List)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

DIRECTION FINDING (DF)

* Douglas (including Doppler and DF Systems WWW Page)
* Moell, J (Homing In Column WWW Page)

DUTCH NATIONAL RADIO SOCIETY (VERON)

* Bruinsma (National Public Relations Committee, National WWW Page, Woerden Chapter Board Member, and Woerden Chapter WWW Page)

EARTH-MOON-EARTH (EME) COMMUNICATIONS

* Di Mattia
* Richardson, G
* Smit (WWW Page)

EQUIPMENT TESTING/TROUBLESHOOTING

* Alois (Kenwood TR-2200A)
* Avnet (including Kits)
* Ayers (Tube and Solid-State)
* Brewer (Tube Gear)
* Bridges (Tech Bench Elmers Amateur Radio Society WWW Page)
* Czaikowski
* Dworkin
* Eisenberg
* Elmore (Troubleshooting)
* Emm
* Gieszczykiewicz (sci.electronics.repair FAQ)
* Goldman (Tech Bench Elmers Amateur Radio Society)
* Gray
* Hare (ARRL Laboratory Manager)
* Harris
* Hendershot (Test Equipment and Troubleshooting)
* Hockaday

* Kolb
* Mello (Test Equipment and Troubleshooting Hints and Kinks without Expensive Test Equipment)
* Morris
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Petri
* Preston (Electronic Surveillance)
* Richardson, G
* Rosenfeld
* Rymell (Electronics and Computer Service Work)
* Salnick
* Seney (Digital Storage Scope FAQ)
* Short (BitBucket Specialized Techniques Mailing List)
* Sohl, R
* Taylor
* Witte (Instrumentation, Test Equipment, and Measurements)

ESPERANTO

* Munsil (including Contact Information for the Esperanto League for North America, ELNA)

FINNISH AMATEUR RADIO LEAGUE (SRAL)

* Toijala (HQ Contact and WWW Page)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cheeseman (Australia)
* Dawson (Linux HAM and AX.25 HOWTO's)
* Dodell (rec.radio.info Newsgroup)
* Gieszczykiewicz (sci.electronics.repair)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Langner (SSTV)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Moell, J (Radio Direction Finding)
* Ruh (Amateur Television)
* Seney (General Amateur Radio, Digital Storage Scopes, and Macintosh Amateur Radio Software List WWW Pages)
* Turvey (United Kingdom)
* Twigger (Amateur Radio Exam Practice WWW Page)
* Woods (Mail-Order Electronics)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Coffman (E-mail Contact)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Tice (Manager, Courage HANDI-HAM System)

HIGH FREQUENCY (HF)/CONTESTING/DX

* Ayers
* Bertolino (425 DX News and IOTA WWW Page)
* Boudda (Morocco)
* Brakob (Contesting/DX)
* Brubaker
* Buck
* Caserta
* Cieslak, C
* Coffee
* Croce
* Czaikowski
* Danaher
* Di Mattia
* Edinger
* Elmore (DX'ing, Contesting, and Propagation)
* Emm
* Forman
* Gray
* Hamilton (HF)
* Harper
* Hendershot (HF)
* Henzel
* Hill (Mobile)
* Hockaday
* Littleton
* Lowman
* Myers
* Neader (Contesters and DX'ers WWW Page)
* Nerenberg (DX Mailing List and WWW Page)
* Nickolaus
* Nutter
* Orcutt
* Pinheiro
* Pitts
* Placer
* Preston
* Reeves
* Richardson, G
* Richardson, H
* Rodriguez
* Rosenfeld
* Rymell
* Salnick
* Sawkins
* Silva

* Sohl, R
* Stanley
* Stocking (Contesting)
* Thomson (Mostly CW)
* Tynkov
* van de Kerk (CW, Low Profile)
* Warth
* Witkowski (DX QSL Info WWW Page, ARRL SWL Bureau Manager)
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Avnet
* Ayers (Tube and Solid-State)
* Bridges (Tech Bench Elmers Amateur Radio Society WWW Page)
* Buck
* Carruth (Digital Design, Software)
* Cieslak, C
* Croce
* Di Mattia
* DuBois (Embedded Systems and Hardware/ Software Design)
* Eisenberg
* Elmore (Construction Practices)
* Forman
* Gilliver (DSP, Blind Issues)
* Goldman (Tech Bench Elmers Amateur Radio Society)
* Gray
* Gunton (Microwave Components/Techlock Distributing WWW Page)
* Halbert (QRP)
* Hamilton
* Hendershot (RF Design and Wireles Systems)
* Hill ("Glowbugs" Tube Homebrewing Mailing List)
* Johnson, R
* Lau (Transverters, VHF/UHF, Filters, Repeatable Projects)
* Mello (including Power Supples, Over 20 Years Experience in
Electronics)
* Miller
* Myers
* Neeson
* Ornitz (Chemical and Toxic Material Use and Handling, including
Printed Circuit Boards)
* Petri
* Richardson, G
* Rymell (Electronics and Computers, Low-Cost Projects)
* Salnick
* Short (BitBucket Specialized Techniques Mailing List)
* Silva (Analog, Digital, Tubes, Semiconductors, RF, Finding Parts)
* Sohl, R
* Stanley
* Stern
* Stocking (including QRP)

* Taylor (Tubes and Amplifiers)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers for Microwave)
* Veach
* Witkowski
* Woods (Mail-Order Electronics)

IBM PERSONAL COMPUTER (PC) AND CLONES

* Ammar
* Angus
* Ayers
* Brown
* Buck
* Buydens
* Caserta
* Cieslak, C
* Cole
* Cox
* Czaikowski
* Danaher
* Dawson (Linux on Intel)
* Di Mattia
* Dworkin
* Edinger
* Emm
* Gray
* Harris
* Henzel
* Johnson, D
* Johnson, R
* Johnston
* Kolb
* Lacy (NuTest and NuMorse Ham Training Software for Windows and WWW Page)
* Matacz (Poland)
* Mello
* Miller
* Morris
* Myers
* Nickolaus (DOS, Windows 3.x and 95, and Ham-Related Applications)
* Nutter
* Patton
* Petersen (Simtel Software Repository)
* Preston
* Reeves
* Richardson, G
* Smith (Building and Maintaining)
* Stannard
* Stocking
* Tynkov (Russia)

* Watters
* Winkler
* Witkowski (including Xbase Format DX QSL Info File)

INTERNET SERVICES

* Ammar
* Caserta
* Cieslak, C
* Coffee
* Hamilton
* Harris
* Johnson, D
* Kolb
* Littleton
* Lowman
* Morris
* Myers
* Orcutt
* Preston
* Reeves
* Richardson, G
* Schleck
* Smith
* Sohl, B
* Sohl, R
* Taylor
* Tynkov (Russia)
* Waller (Free Ham Radio WWW Home Pages and E-mail Accounts)
* Watters
* Witkowski

JAMAICA AMATEUR RADIO ASSOCIATION (JARA)

* Wilkinson (WWW Page)

LASER COMMUNICATIONS

* Harris

LOW FREQUENCY (LF)

* Harris
* Richardson, G
* Rymell
* Thomson (1750 meter band LOWFER operation and LF/MF Radiobeacon
DX'ing)

MAIL/FILE TRANSFER PROTOCOL (FTP)/WORLD-WIDE WEB (WWW)/MULTIPLE-USER DUNGEON
(MUD) SERVERS/ARCHIVES

* Bauer (NASA/SAREX WWW Page)
* Bertolino (425 DX News and IOTA WWW Page)

* Bible (Spread Spectrum WWW Page)
* Bloom, et al (ARRL HW WWW Page, ARRL Info Mail Server)
* Bowen (rec.radio.amateur.* Supplemental Archives)
* Brewer (Antique and Older Equipment WWW Page)
* Bridges (Tech Bench Elmers Amateur Radio Society WWW Page)
* Bruinsma (VERON National and Woerden Chapter WWW Pages)
* Caserta (425 DX News WWW Page and FTP Archives)
* Davis (NZART WWW Page)
* deVolpi (Amsoft and World of Ham Radio WWW Page)
* Di Mattia (Italian Ham Radio Home Pages and Links WWW Page)
* Douglas (DF Systems WWW Page)
* Emm (Colorado QRP Club WWW Page)
* Estey (TAPR North American Digital Systems Directory WWW Page)
* Goldstein (Packet Radio and TAPR WWW Server)
* Gunton (Microwave Components/Techlock Distributing WWW Page)
* Gutstadt (Navy/Marine Corps. MARS National WWW Page)
* Hall, L (Women/YL WWW Page)
* Hall, R (Stones River ARC, K4FUN, WWW page)
* Huntting (KaWin WWW Page)
* Johansen (Louisiana ARES WWW Page)
* Johnson, D (TriCounty, North TX, ARC WWW Page)
* Komppa (Foreign Licensing WWW Page)
* Langner (SSTV WWW Page)
* Leavey (73 Magazine RTTY Loop Column WWW Page)
* Leynes (Youthnet News WWW Page)
* Lloyd (QRZ! Ham Radio CDROM FTP Archive and WWW Page)
* Luszcz (College and University Club List WWW Page)
* Moell, A (Hospital Disaster Support Communications System WWW Page)
* Moseson (CQ Magazine and Allied Publications WWW Pages)
* Murnane (Wireless Institute of Australia, New South Wales Division, WW Page)
* Neader (Contesters and DX'ers WWW Page)
* Nerenberg (Contesting, DX, and Technical Amateur Radio WWW Page)
* Pawson (British Amateur Television Club WWW Page)
* Petersen (Simtel Software Repository)
* Pinheiro (Azores Islands, Portugal, Amateur Radio WWW Page)
* Pulfer (Radio Amateurs of Canada WWW Page)
* Seney (Digital Storage Scope FAQ, Macnet, and Macintosh Amateur Radio Software List WWW Pages)
* Shuch (SETI League WWW Page)
* Smit (EME and SETI WWW Page)
* Sproul, M (APRS WWW Page)
* Strobel (K6PBT Dealer Directory WWW Home Page)
* Sussman (PACTOR News WWW Page)
* Tice (Courage HANDI-HAM System WWW Page)
* Toijala (SRAL WWW Page)
* Twigger (Amateur Radio Exam Practice WWW Page)
* Vekinis (Picosat System WWW Page)
* Waller (QSL.net WWW Page, Site of Free Ham Radio WWW Home Pages

and E-mail Accounts)
* Walsh (QCWA WWW Page)
* Whatton (Amiga Amateur Radio User Group WWW Page)
* Wilkins (California Amateur VHF Enthusiasts WWW Page)
* Wilkinson (JARA WWW Page)
* Williamson (AMSAT WWW Page and Anonymous FTP Archives)
* Winkler (Ham Radio & More Show WWW Page)
* Witkowski (DX QSL Info WWW Page)
* Woods (Mail-Order Electronics FTP Archive and WWW page)

MAILING LISTS

* Ackermann (TAPR Net-SIG BBS)
* Carcia (ARRL Bulletins)
* Caserta (425 DX News Mailing List)
* Colwell (Advanced Computer Controls and Link Communications
Repeater Controllers)
* deVolpi (AmSoft and World of Ham Radio Product Announcements)
* Dodell (Land-Mobile Radio, MARS Members)
* Hill (Antique and Older Tube Equipment, rec.radio.amateur.*
Working Group, "Glowbugs" Tube Homebrewing)
* Kruml (EComm Pacific Northwest ARES)
* Meredith (F6FBB Packet BBS)
* Nerenberg (DX)
* Rippel (Collins Radio Equipment)
* Short (BitBucket Specialized Techniques Mailing List)
* Williamson (Many, AMSAT-related)

MEDIA (PUBLICATION/WRITING/BROADCASTING)

* Bertolino (SWL Page of Radio Rivista, Italy)
* Bloom (QEX)
* DeWolf (Media Relations for Clubs, Syndicated Columnist on
Internet Matters)
* Lau (QST/QEX)
* Leavey (73 Magazine RTTY Loop Column)
* Leynes (Editor-in-Chief, Youthnet News)
* Lloyd (QRZ! Ham Radio CDROM)
* Moell, J (Homing In Column and WWW Page)
* Moseson (CQ Magazine and Allied Publications Online Coordinator)
* Ruh (ATV Quarterly)
* Schleck (FAQ's and auto-faq)
* Seney (Macnet)
* Sussman (PACTOR News)
* Winkler (Ham Radio & More Show)
* Witte (Ham Magazines, Electrical Engineering Publications, and a
few books)

MEDIUM FREQUENCY (MF, 160 METERS)

* Ayers
* Gray

* Harris
* Hendershot
* Henzel
* Richardson, G
* Sohl, R
* Stanley
* Stillinger
* Thomson (LF/MF Radiobeacon DX'ing)
* Zurn

MICROWAVE

* Di Mattia
* Gunton (Microwave Components/Techlock Distributing WWW Page, Components for up to 50 GHz)
* Hammill
* Hendershot
* Hockaday (10 Ghz)
* Lau (Transverters up to 24 Ghz)
* Lowman
* Miller
* Reynolds (SHF)
* Richardson, G
* Sohl, R
* Stillinger
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers)

MILITARY AFFILIATE RADIO SYSTEM (MARS)

* Ayers
* Browne (Navy)
* Cartier (Army, CT Director for Emergency Operations)
* Chapman (Navy/Marine Corps., Coordinator Afloat and Overseas Operations)
* Cox (Air Force, Region 2 Packet Manager)
* Dodell (Air Force, Mailing List)
* DuBois (Army, Utah Zone 5 Coordinator, NCS, and EC)
* Forman (Air Force)
* Gutstadt (Navy/Marine Corps., including National WWW Page)
* Hamilton (Army)
* Littleton (Army)
* Mello (Army)
* Smith (Air Force)
* Sohl, R
* Stanley (USAF Region 3 Administrative Assistant)
* Taylor (Air Force)

MOBILE/PORTABLE/FIELD DAY

* Adams, I (Mobile and Portable)
* Ammar (Portable and Field Day)

* Ayers (Mobile and Portable)
* Boccardi (Field Day)
* Brown (Field Day)
* Brubaker
* Buck
* Carruth (FM, HT's, 10m SSB)
* Caserta (Portable)
* Cieslak, C
* Coffee (Field Day)
* Colwell
* Czaikowski (Mobile and Field Day)
* Edinger (Mobile)
* Eisenberg (Mobile)
* Emm
* Forman
* Gray
* Hamilton
* Hare (RFI issues)
* Harris (Portable)
* Hendershot
* Henzel
* Hill (including MF, HF)
* Hockaday (Mobile)
* Humphries
* Johnson, D (Field Day)
* Johnston (Field Day)
* Kolb
* Lowman (Field Day)
* Mello (Mobile/Portable, 20 Years Experience)
* Morris (Portable)
* Nickolaus (Field Day)
* Patton (Field Day)
* Petri (Field Day)
* Placer
* Reeves
* Richardson, G (Mobile/Portable/Field Day)
* Rosenfeld (Field Day and Portable)
* Rymell (Portable and Field Day)
* Sawkins (Field Day)
* Schumacher (VHF/UHF/Beam/Yagi Mobile Antennas)
* Smith (Mobile and Portable)
* Sohl, R (Mobile/Portable/Field Day)
* Stanley (Viking, MN, Amateur Radio Society Field Day Chairman)
* Sweeney (Mobile)
* Warth (Mobile and Field Day)

NATIONAL TRAFFIC SYSTEM (NTS)

* Boccardi
* Czaikowski
* Elmore

* Goldstein (NCS FL Net, Packet)
* Neeson (Eastern Canada, Digital Modes)
* Richardson, G
* Zurn (Europe)

NEW ZEALAND ASSOCIATION OF RADIO TRANSMITTERS (NZART)

* Andrews, D (Frequency Management and Technical Advisory Group Chair)
* Davis (WWW Page)

NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS (NACEC)

* Dworkin
* Rymell (PA State Director)

NOVICE/TECH INSTRUCTION

* Adams, I
* Avnet (Fountain Valley, CA Instructor)
* Ayers
* Been
* Brown
* Buck
* Choate (AC/DC Theory, "Big Picture")
* Cieslak, C
* Czaikowski
* Danaher
* DeWolf (Ottowa Valley, Canada Instructor)
* Dworkin
* Edinger
* Emm
* Forman
* Gieszczykiewicz
* Gray
* Harris
* Henzel
* Hill (CW Learning Hints)
* Hockaday (CW and Novice through General)
* Johnson, D (Classes for 5 or more students, Tarrant/Parker/Wise Counties of North Texas)
* Lacy (NuTest and NuMorse Ham Training Software for Windows)
* Larson
* Lavin (Uncle Bob's Radio School)
* Maia (W5YI Group Education Division)
* Mello (USAF Electronics Instructor, Over 20 Years Experience in Electronics)
* Morris
* Paperman
* Pitts (Anacortes, WA)
* Reeves
* Richardson, G (Santa Barbara, CA)

* Riddell (Kentucky)
* Rosenfeld
* Rymell
* Smith
* Sohl, R
* Stern
* Twigger (Amateur Radio Exam Practice WWW Page)
* Veach (Novice/Tech Classes, Lawrenceville, GA)
* Winchell

PACKET AND DIGITAL NETWORKING

* Ackermann (including TCP/IP, TAPR, Net-SIG, Kantronics D4-10 19.2kBaud Radio Modems, Linux/TNOS BBS, Linux Native-AX.25 Switch, Duplex Repeaters for 9600 and 19.2kBaud Joint IP Coordinator for Ohio Subnet)
* Angus (TCP/IP, NOS, UUPC, Tnet, and SNEWS, SCO Xenix, Windows 95, IP Coordinator for CA - LA County Subnet)
* Bloom (ARRL CNC Contact)
* Boccardi (including APRS)
* Caserta
* Cieslak, C
* Coffman (GRAPES 56 kBaud Radio Modems)
* Cole (TCP/IP and NOS)
* Cox (including MARS)
* Czaikowski
* Dawson (Linux HAM and AX.25 HOWTO's, IP Coordinator for Sydney, Australia, Internet Gateways)
* Di Mattia
* Dodell (IP Coordinator for AZ Subnet)
* Duba (Philippines)
* DuBois (including OSI, Protocol Development, Internetworking, and Standards)
* Estey (TAPR North American Digital Systems Directory WWW Page)
* Forman
* Goldstein (TAPR TNC-2 Firmware, Packet Radio and TAPR WWW Server)
* Gray
* Hamilton
* Hendershot
* Huntting (KaWin WWW Page)
* Johnson, D
* Karn (SQPSK Software Modem for Amateur Satellites)
* Leynes (TCP/IP)
* Mann (Wearable Computing using GRAPES 56 kBaud Radio Modems)
* Meredith (AZ VHF/UHF Digital Coordinator, F6FBB Packet BBS Mailing List and Support BBS)
* Myers (including TCP/IP)
* Neeson
* Nerenberg (TCP/IP)
* Nickolaus (IP Coordinator for Nebraska Subnet, F6FBB BBS Sysop, TheNet Node Operator, Regional Packet Symposium Organizer)

* Pinheiro (Portugal)
* Pozzi (Argentina)
* Reynolds (TCP/IP over HF)

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www.fr.flashnet.it/cgi-bin/425dxnews-list

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but

boards filled with chips do not evoke a sense of familiarity or
recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet
Enthusiasts Society (GRAPES), but I am in contact with them, and have
experience using their 56 kBaud radio modems. At the very least, I can
forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper
by WA4DSY explaining the theory and practice of the 56 kBaud radio
modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem,
but there are better solutions. The Ottawa PI card and the Gracilis
PacketTwin card are two good solutions. Of course they are PC bus

cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join
the list server. If you need information on Link Communications
Products, contact them directly. Presently there are aprox 325 Members
on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

if I can't help with something, I probably know someone who can.

Carl Estey WA0CQG

wa0cqg@tapr.org

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage,
coordinate, or regulate the usage of digital systems, but to provide
the most up to date and accurate listing of digital systems that can
be provided. Neither is it a formal organization, but a mechanism to
allow regional groups to provide and share information regarding
digital systems.

The Digital Systems Directory listing is intended for use by
individuals to further their enjoyment of the hobby and by
organizations to help plan and develop digital networks.

to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann AG9V

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

QEX Editor

Digital Signal Processing (DSP)

Collecting information for the next annual ARRL Computer Networking Conference:

http://www.tapr.org/tapr/html/dccconf.html

For information about the ARRL info server, send E-mail to info@arrl.org with the word "HELP" in the message body.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at
this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more
countries. That is, of course, if I have the data. In order to do this

I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

For hams that are interested and live in my area, they are welcome to login to IBBS. IBBS is a full-time UNIX-based computer that is dedicated to ham radio. I carry a full rec.radio.* news feed and E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be willing to answer any question a new person to the hobby has. If I don't know the answer, well, NASA is only two blocks away. :-) I live and work here at Edwards Air Force Base, CA. I am also very active in SAREX.

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership
benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in
one of the many books about Amateur Radio. Folks who call or write to
ARRL TIS staff are often referred to one of these books or to a past
magazine article.

However, most hams find that the fastest way to get the answer is to
do their own research. Publication catalogs often talk about what
kinds of information are available in different books. A few good
books will answer the vast majority of questions as well as enhance a
ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of
articles appears in the December issue of QST and other magazines.
These indexes will usually have an article or two (or six) about a
particular topic. If an older QST or QEX article is not available
locally, the ARRL Technical Department Secretary can provide a copy
for a small fee. Back issues are also available from the QST
Circulation Department.

The ARRL Technical Information Service is a valuable source of
information and research for questions that cannot be answered by
other means. ARRL TIS has information packages and bibliographies that
are available on request to answer most technical questions.

For those who want to know if something has been previously published
on a particular subject, TIS can also assist with research to locate

this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have

the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Our club offers CW training opportunities and we are working on
starting some theory classes but there are plenty of active Elmers in
our group despite our lack of organization to date. We also have VE

sessions and would be glad to help anyone in the area who is
interested in amateur radio.

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com
USA | |
- --

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

* Homebrewing

* NTS
* Packet and Digital Networking

I am an NTS operator running an unattended digital (Express, Winlink equivalent) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address
listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet
BBS with the F6FBB software, as well as a number of Packet Nodes using
TheNet Software. I have coordinated the Volunteer Exam Session in this

area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emeregency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978

and am still President of the corporation. I was also the local DES Cordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Volunteer Examiner (W5YI)

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not

expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

You are a teacher so you know how it is?
It is hard to teach today's youngsters but it is FAR harder to
try and effect a change on the typical old fat white ham. I can change
students but hams- thay are the living dead.

53 is not the only frequency that this goes on. Most of 53's problems
lie with a drunk named James R. Vinning (look up his call) and it can
be very civil at times.

Amateur Radio is a photo copy of the country as it is today. No
morals, and nothing shocks. The whole country is going to hell in a
hand basket. Seems to have gotten far worse since a bumpkin from
Arkansas got elected President.

You mean, our President, the one being sued for sexual harrassment? Now, come on, you know he is a great human, we just don't understand him. Confidently, I don't want to either.

I sure hope those people that voted for him, like him and all the things he is doing. There is one bumper sticker I have seen that is quite funny (and true).

"What Michael Jackson is doing to little boys, President Clinton is doing to the country"

I leave you with that and bid .....adieu...

That was a lovely rant, Gary, and one which should be printed out and hung on the wall of every ham shack. I'm only going to quibble a little with the final paragraph.

First, I think that at least *some* of the HF problem could be solved by similar techniques as you outline for VHF. Most of those lids have ham neighbors, and a bit of pointed peer pressure would be bound to do at least some good, it seems to me.

Second, there's usually not much good that can come from running to the government to solve our problems. The typical bureaucratic response to complaints is to hide behind the technicalities in the rule book, and if that doesn't work, to make even more restrictive rules. See the stupid anti-scanner laws for an example. You'll also recall the ten meter amplifier ban, which not only didn't solve the problem, but made it worse. And that ban continues today, long after it's been pretty much rendered moot by the collapse of the CB boom. I'm afraid that if we bring too much pressure to bear on the FCC, they'll just use it as an excuse to tell us the obvious; that we're misusing our frequencies, and they'll take more of them away from us.

I don't have the solution to these problems, but I do think we need to get together and figure out some alternatives. Of course, that's not nearly as much fun as Code/No Code religious wars, is it?

P.S. I enjoy your techie lectures, even though much of it is over my head. I've even stolen a bit of it to make some points on a BBS net.

Hi Rod!

OK ... here goes. My source is the *current* UK amateur license
booklet, published by the Radiocommunications Agency.

G England
GB Special Event Stations anywhere in the UK, Channel Is or Isle of
Man. (Not just England)
GD Isle of Man
GI Northern Ireland
GJ Jersey
GM Scotland
GU Guernsey & Dependencies
GW Wales

2E England (Novices)
2D Isle of Man (Novices)
2I Northern Ireland (Novices)
2J Jersey (Novices)
2M Scotland (Novices)
2U Guernsey & Dependencies (Novices)
2W Wales (Novices)

M England
MD Isle of Man
MI Northern Ireland
MJ Jersey
MM Scotland
MU Guernsey & Dependencies
MW Wales

GX, MX England (Clubs)
GT, MT Isle of Man (Clubs)
GN, MN Northern Ireland (Clubs)
GH, MH Jersey (Clubs)

GS, MS Scotland (Clubs)
GP, MP Guernsey & Dependencies (Clubs)
GC, MC Wales (Clubs)

The meaning of the numeral after the prefix is rather complex, but is related to the License Class. Class A = full privileges, all bands. Class B = no code, for 50 MHz and higher frequency bands only.

1. All calls with one-letter and 2-letter suffixes are Class A.
2. For calls with 3-letter suffixes:
2, 3, 4, 0 after the prefix signify Class A.
1, 6, 7, 8 after the prefix signify Class B.
(At present, there are no 3-letter-suffix callsigns issued containing the numeral 5 and 9)
3. These rules apply to Novices (Class A and B) as well as Full Licenses (Class A and B), but Novices are only allowed to use small sub-bands within the "full" allocations.
4. There have been many "oddities" in respect of GB (Special Event) callsigns, for example GB800, GB100, GB50, GB9, etc. For these calls, it seems "anything goes"! Special Event calls are issued by the RSGB; all others are issued by the Radiocommunications Agency.

Hope this helps.

Don't forget that there is a different reset to go with the extended
rx/tx mods than what is in the 530 owner's manual. That is, if you
do the owner's manual reset, you have to do this one also. I forget
what it is at the moment, but will post it Wednesday (9th).

The following is a reschedule from the April 5 launch that had
to be scrubbed due to wind and rain. No changes except that
the HF net frequency now has a wider tolerance of 10kHz. Please
also note that real-time pictures should be available at the
Windtrax website on April 12.

INDIANA REPEATER/ATV/GPS PACKET BALLOON LAUNCH
WINDTRAX-11

Region: West Central Indiana

Date/Time: Saturday, April 12 / 7:00-8:00 AM Indiana
Time, 12:00-13:00 UTC

Location: Roachdale, Indiana (about 33 miles west
of Indianapolis) at North Putnam County
Middle School

Other states where Illinois, Michigan, Ohio, Kentucky,
the signals will Missouri
reach easily:

Site Coordinates: for initial antenna heading -
39 degrees 47.46" North Latitude
86 degrees 48.05" West Long.

ATV: 439.25 MHz AM NTSC from one color
and one b/w camera; WB8ELK color graphics
generator (1.5 watts, vertically
polarized)

VHF/UHF Repeater: Input - 144.30 MHz FM
Dual Output - 444.85 MHz FM (100mW, VP)
- 52.525 MHz FM (50 mW, VP)
Voice ID

Telemetry: 446.00 MHz FM AX.25 1200 baud packet
GPS/APRS position data (750 mW, VP)

HF Net: 3.860 - 3.870 Mhz
VHF net: 147.33 Repeater (Putnamville)
(both beginning 11:30 UTC)

I know everyone is sick of the CW stuff but the following is a e-mail the Larry sent to me and my reply. I feel the following has some very valid points BOTH WAYS FOLKS!

If you feel like it, read on. It is a little long!

Keith - KT4VQ wrote:

Larry, I am not going to reply to this as a posting on the News Group. I will only reply via e-mail.

You are very clear in your comments and to some degree it makes sense what you are saying. I myself had wanted to be in ham radio since the very early 70's. Due to work, family, college, more works, etc.... I never took the time to learn the code as many before me and many more to follow. The technical part has never been a problem (I'm an EE). My obsticale (I think I spelled that correct) has always been the code.

I have not finished raising my family yet but I did take some time for myself a few years back and picked up the study questions, reviewed them on Friday took my test on Saturday and then became a No-Code tech. Therefore, I support the No-Code tech because like in my case, it allows folks without the code the ability to "sample" amatuer radio.

Six to eight months after I got the no-code I bought from a local ham a Yeasu 400 that had been used by an 11 meter person. I did not care to much that it had been worked on with a chain saw, I wanted it to receive only. I listened to 20, 40, and 80 meter bands. The purpose was to see if I had any intrest in continuing my advancements. I almost desided not to advance due to the crap you hear on 80 meter.

One year after the no-code I passed 5wpm and one month later I passed 13 and the general test. The next weekend I passed the Advanced. The following month I took the Extra written and passed it. I am still working on the 20wpm. You see, each test you pass, each new license you get are all drivers to push you forward in the hobby (and yes it is a hobby despite what the FCC rules or others may state). If it were a written test only I would already be an Extra class.

Yes, PACTOR is a small part of the test but please look at all of the different parts of the written test. Could we say...I never plan to use an auto path so do give me that part of the test, and I don't plan to use ATV so don't give me that part of the test, well let's see, I only plan to use SSB on 20 meters so why don' you just ask me the band plan and which is most often used, USB or LSB?

Do you see my point? If the FCC were to allow everyone to customize
their own test based on what they think they want to use there would be
no true control of bands and who can use which parts. Give up CW
requirements and what is next? The rules maybe? Hmmmm.

I would like to thank you for your calm approach to expressing your
feelings and thoughts on the CW issue. Thanks for your point of view!

On second thought I think I will send this to the news group as well!

Larry wrote this:

Hi, Keith!

I read your comments to Jerry, and have a few comments of my own:

> Jerry, it is apparent you feel that code is a useless method of
> communications. It is ok for you to feel that way.
>
> It still does not change the fact that it is a requirement for getting
> onto HF.
>
> My point is for those that have not passed their code YET, to stop
> whining pass the code and then put it in the closet. Then they will
> have all of the HF bandwidth they want.

Not true -- I passed the CW when I got my license in 1988. Because I do
not want to work CW, the only bandwidth I have on HF is the dubious (and
recently useless) 10-meter portion. Why should a person spend hundreds
of
dollars to purchase an HF radio which can only be used in a mode
undesired
or on a band that is effectively closed? What is needed is a few more
KHz
down in bands that are "open" throughout the solar cycle. Even if there
is
no change in the treaty or in the FCC regs, this would provide more of
an
opening and incentive to move the No-code techs up into the "higher
class"
license levels.

> I don't use my code. I passed my code to get HF. I will most likely
> never use it again. But, I don't use PACTOR either and I had to answer
> questions about it in order to pass my exam.

True -- but if you failed ALL the questions on PACTOR you could still
pass
the exam and still get your upgrade. If you fail 40% of the CW you
CANNOT
upgrade. Since I have no plans to use CW ever as a regular operating
mode,

I feel it is a useless impediment. I've had some correspondance with
Roland Stiner (of this newsgroup), and as you might have noticed, He is
pretty PRO-CW. But he is not a builder -- suppose we made access to the
HF
bands depend upon a pass-fail construction project? He and many others
would NOT be able to use the HF bands because they choose not to pursue
one
aspect of Amateur Radio. The same argument can be made concerning the
skill in using CW. Learning it at 5wpm is something almost anyone CAN
do
(given enough time and incentive). Beyond that, for the higher licenses
and the HF bands and DX -- higher CW speeds are questionable
requirements.
I saw a posting here a few weeks back the proposed the CW be
incorporated
into the written, so a person could "fail" the CW and still "pass" the
upgrade with greater knowledge in other areas of the testing. That is
at
least an idea moving in the right direction.

>
> I don't plan to contine explaining myself to you anymore. Congrats on
> the Advanced ticket. You passed your code apparently because you wanted
> something....my guess is HF access.......let's see could the others do
> that as well?

There is a real question today about the ability of "all" people to
learn
higher speed CW. At the current entry level of 5wpm, CW is a matter of
mental translation. Almost anyone can learn this. The infamous 10wpm
"barrier" is the transition from "translation" to "language". I have
studied Spanish, Latin, German, Greek, and English [:-)] -- and I know
I
have no talent for languages. I have a friend who speaks 6 or 7
languages
(and has been called upon to perform weddings for foreign nationals in
the
US -- neat!). For him, languages were easy.

This same type of thing is true for CW. Some people can learn it
easily,
others will never have a gift for it. They might study and learn the
basics (5wpm), but never get the higher speeds. Since they will not be
using the CW they don't know, it makes no sense (to them) to have the
higher CW speeds required. You might get a "flavor" of their
frustration
if you can imagine the FCC suddenly decreeing that all current HF
operators
must stop HF operations immediately, and can resume only after passing
language proficiency in Russian (or Japanese, if you prefer). As such a
requirement makes no sense to us (I'll assume . . .) so the CW

requirements make no sense to a lot of other people.

I have heard the "filter" argument, and it really doesn't stand up. I find
it as offensive as the "whites only" rules one used to find on certain golf
courses (I am white, and not an avid golfer).

I've heard the anecdotal arguments -- "I could only communicate with the
world/family/hospital staff via CW" -- and that seems a good enough reason
for 5wpm. But cannot support higher speed requirements.
>
> Good Luck to you in your efforts to open the HF airwaves to those too
> lazy to put forth enough effort to pass the code.
>
Ahh, but what is "enough" effort. To hear some of the people tell it, they
passed their 13wpm or even their 20 (from scratch) in less time than I have
spent each year since 1988 trying to get up to 13. It is NOT that I am
"too lazy" to pass the code.

Consider that there have probably been a lot of people over the years who
could not upgrade -- or had trouble even learning the code. None of them
would (still) be in Ham Radio. The attitude of "I did it so everyone can."
is foolish on the face of it and unprovable. Given the natural variations
in individual abilities, higher speed CW requirements present an artificial
barrier to otherwise qualified, talented, and interested people. The mere
fact that we have always had these requirements doesn't make them right.

I have not given up totally on passing my 13wpm, but I am discouraged and
frustrated by the whole process. People encourage me to purchase a $500
radio, plus accessories, to listen to W1AW (their schedule seldom fits
mine, as of February's QST listing). But why invest the money in a radio I
cannot really use until I pass the 13wpm? (The written is no problem, I
passed that "cold" after getting perfect scores on my Novice and Tech
writtens -- the VE's suggested I go ahead and try it anyway.) Why buy the
radio -- so someone else can offer to purchase it from me at $450? I am
not willing to be the middleman who takes a "loss" on a radio so someone
else can get it cheaper -- let them buy it for $500 if that's what they
want. When (IF) I get a better mix of HF privileges, THEN I'll invest

in
the radios I need.

It's fine for you to favor keeping the CW. I don't even really mind if
you
don't want to allow the system to change to make it more realistic --
your
choice. But I couldn't let your posting slip by without at least trying
to
explain things from my side. (Every few weeks I have heard enough
pro-code
follishness to "set me off". I don't object to rational and logical
arguments in favor of CW, but the religious reasoning for keeping CW
annoys
me no end.)

Blessings to you, and Good DX!

534. What is a Grid Square?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-08 00:00:00 UTC
From: Viking <viking@add-inc.com>
Message-ID: <01bc442c$25d38440$1f08aacf@viking.add-inc.com>
Source record: 200836

What is a grid quare?I believe it helps identify your location and I was told it was a good thing to put on a QSL card. I could not find any info on this term in the ARRL handbook.

OK-I couldn't find it in the book but I did find the the program on the computer disc that converts lat-long to a grid-square. I cannot get this program to work however. Anyone out there aware of any other program that does this conversion?

536. US License Examination Opportunities Scheduled 4/8/97 to 6/30/97

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-08 00:00:00 UTC
From: Bart Jahnke <vec@arrl.org>
Message-ID: <334A6458.2937@arrl.org>
Source record: 200838

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

Have you tried our ARRLWeb ExamSearch Page? If not, why not
give it a try at "http://www.arrl.org/arrlvec/examsearch.phtml"

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.arrl.org/fcc/fccld.htm

or look for the University of Arkansas Little Rock Web page
FCC call signs look up link link (http://www.ualr.edu/~hamradio/)
link from the ARRL Web page at: http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. FCC National Call Center can be reached at 1-888-225-5322.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License.
Form 610-V is the special application for persons seeking a
Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC
vanity call sign information fact sheet PR 5000, number 206v)
by writing ARRL, 225 Main Street, Newington, CT 06111.
You must include an SASE.

Form 610 or other forms, including Form 610V, are also available
from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests
by calling 800-418-3676.

****

LICENSE RENEWALS OR MODIFICATIONS

Effective in late October 1996, the FCC ceased sending amateurs
renewal reminder notices using Form 610R. Amateurs may still
renew the licenses by mailing a standard Form 610 directly to
the FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. There is
presently no charge to renew or otherwise modify your license through
the FCC.
In mid-July 1996, FCC authorized VECs to accept and electronically
submit data for FCC license renewals or other amateur license
modifications. Therefore, ARRL Members may now choose to send their
standard Form 610 (not 610R) to us at the ARRL and we will submit
the application data electronically to the FCC--which the FCC
typically receives and processes overnight. This is a free members
only service.
The W5YI Group currently sends a W5YI-version Form 610R to
amateurs notifying them of their impending license expiration.
Only W5YI can accept the W5YI-version Form 610R electronic processing.
The cost of the service is $6.
License modifications that can be handled by any of the above
sources include RENEWALS, or ADDRESS, CALL SIGN or NAME changes as
supplied on Form 610. Forms 610-A, 610-B and 610-V can presently
only be processed by the FCC (per FCC instructions).

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else
bring two non-photo forms of ID); bring your original FCC license
and a photocopy of your license (if you are currently licensed);
bring the original and a copy of any Certificate(s) of Successful
Completion of Examination (CSCEs); if necessary, bring a scientific
calculator (that does not have the ability to store formulas); bring
a pen and two pencils; and be sure to bring payment for the test fee
if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*,**)Technician (dated before 3/21/87)-Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license
or a copy which was issued on or before 3/21/87 is acceptable by VEs.
VECs may be able to allow such credit based upon an original CSCE
issued on before that date which shows Element 3 credit for passing
the (then) 50 question Technician/General written test. If such
documentation has been destroyed, the FCC will itself issue the
necessary verification. To obtain such verification, acceptable
by all VE Teams and VECs, write to FCC and request a "Letter of
Verification of Technician License Held Prior To March 21, 1987".
Mail (or fax 717-338-2696) your request to: FCC, 1270 Fairfield Rd,
Gettysburg PA 17325-7245. If you include reference to a fax number
in your reply, the FCC will fax your verification letter to you.

Normal turnaround at FCC is 3-5 business days after receipt.
(**) Any person holding a now-expired Technician license issued
before 3/21/87 can obtain credit for Elements 3B and 1A
(per Section 97.505(a)(8,9)) of the FCC Rules.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 215-5052. ARRL/VEC Fax 860-594-0339.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
Fax 860-594-0339. The 1997 test fee is $6.25.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473. The 1997 test fee is $3.00.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-832-6803

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = MOKAN VEC (previously named PHD VEC), PO Box 11, Liberty,
MO 64068-0011; 816-781-7313. The 1997 test feee is $5.00.

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1997 test fee is $6.00.

T = W4VEC VEC (previously named TRIAD VEC), 3504 Stonehurst Pl,
High Point, NC 27265; 910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1997 test fee is $6.25.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1997 test fee is $6.25.

Maximov Publications and Leonardo

announce

Space Arts Workshop '97

On April 13, 1997, a select group of artists and scientists from around the world will be gathering in Paris, France to discuss the social and cultural aspects of exploring space.

Seventeen individuals will be presenting their works of art, speaking as artist as space explorers. Among these people, is artist Arthur Woods whose work, "Cosmic Dancer" flew aboard the Mir Space Station. Also speaking will be Richard Kriesche, artist of the first art project in the history of the Russian space flight, to fly aboard the space station Mir (1991).

The event will be broadcast over the Internet via Maximov Publications Special section on the Mir Space Station (http://www.maximov.com/Mir/). You can view the preliminary pages at

http://www.maximov.com/Mir/mirspaceart.html

The space arts meeting is being organized by ars astronautica, Leonardo - the Journal of the International Society of the Arts, Sciences and Technology, Maximov Publications, and the OURS Foundation.

Workshop members will go online to answer questions from users (April 13, 1997 at 4PM to 9PM GMT).

During the event, Amateur Radio Operators around the world will be relaying questions to cosmonauts aboard the Mir Space Station. In order to get the questions to amateur radio operators we are asking for submissions before April 13th.

*** CALL FOR QUESTIONS ***

We are requesting questions for both workshop members and cosmonauts. Please submit your questions to Mark W. Curtiss via email (mcurtiss@excite.com) or via the online form (http://www.maximov.com/Mir/mirspaceartstalk.html). Results for these pages will remain posted at this site for future reference.

Thank you

> Bill Gates wants to own everything!

[snipped repeat of original inquiry and Roland's blatant
misinformation in reply thereto]

See my reply ... Bill Gates, not Microsoft itself, is one of the primary
investors in Teledesic. AND Teledesic already has their license
for their system and it has NOTHING to do with 2m, 220, or 440.

The Teledesic system will operate in the higher microwave bands.

As usual, Roland has spouted off as if he knew what he was talking
about, when in fact he doesn't ...

Rumors like Roland fuels with his misinformation often generate
waves of irate letters to the FCC, which are very bad for us because
they only serve to give the impression that hams are a bunch of
technically ignorant, ill-informed idiots ...

539. CW requirement is here to stay

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-08 00:00:00 UTC
From: vigilant <vigilant@cetlink.net>
Message-ID: <01bc443f$de663580$98681fce@mjsdt>
Source record: 200841

by the looks of this newsgroup..if the cw requirement were to be dropped the hf bands would sound more like the citizens band than is already does.....
For those of you who don't/can't/won't learn the code....why complain about it???? what is so special about HF that the bands/modes you do have aren't good enough???? I went from 0 ham radio knowledge to Extra Class in 3 1/2 months...Big Deal!!!! I just wanted to get it over with!!!!....there are so many modes and such on even the tech bands that nobody could possibly do it all.....so like I said....why complain about it? nobody in this newsgroup can do anything about the privledges so we are just wasting time/energy complaining....why not instead everyone share information about how we can better communicate with the modes we do have and even come up with some NEW modes...yes we can do that!!!
....experiment, explore, and HAVE FUN!!!...
Jerry/AE4PB

If you have questions or need assistance contact: k7on@qsl.net

542. Wanted: Kenwood manuals

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-08 00:00:00 UTC
From: davidj@salsgiver.com
Message-ID: <334b88ce.1719484151@news.alterdial.uu.net>
Source record: 200844

I am looking for the following original or reprinted copies of the
following Kenwood equipment: I will also pay shipping and copying
costs if anyone has any of these manuals..

Kenwood TS-700SP - 2m ALL MODE TRANSCEIVER
need service manual

Kenwood TS-600 - 6m ALL MODE TRANSCEIVER
need owners manual and service manual

Kenwood R-599D - COMMUNICATIONS RECEIVER
need operators manual and service manual

Kenwood T-599D - SSB TRANSMITTER
need operators manual and service manual

Also, if you know of anywhere I can obtain these, please let me know
via email.

Thanks,

Dave

543. GMRS info needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-08 00:00:00 UTC
From: David Lee <dwl@slip.net>
Message-ID: <5idsj7btd2@owl.slip.net>
Source record: 200845

Hi,

I'm interested in GMRS radios as a way to communicate with my
non-ham friends. Can anyone point me to any good books or
on-line (e.g. WEB) articles on GMRS? I'm specifically interested
in knowing how to use repeaters, repeater locations, and good
brands of radios. Can anyone recommend the Maxon line of portables?

Please respond by e-mail if possible, dwl@slip.net

Thanks,
-David

CrACKeD (cracked@primenet.com) wrote:
:
: So now one can simply pay a VEC to pass him or her? CW isn't the only
: requirement for a license (and isn't a requirement at all for a tech
: license). And it is only the 'entire point' of amateur (not amatuer)
: radio in YOUR eyes, remember.
:
: Some years later someone fixed the problem for me and created the no-code
: license. That effort was just as worth it.

There was a point in time that CB required you to get a license from the FCC. It didn't have any really difficult testing requirements and a ton of people ended up on CB. My father was one of them -- KAVH0550. Then, as more and more people ended up using CB, it became fairly useless unless you wanted to listen to people lambast you and use profanity.

Amateur radio is a place where people evince a dedication to a hobby and generally a desire to upgrade to the next level of knowledge, thereby opening new opportunities to use different bands. The Novice level license was originally intended as a way for amateurs to get into radio with a few HF bands and no VHF/UHF bands. Technician required the same level of code with the addition of another theory test.

The FCC allowed no-code licenses at some point (I don't remember). This allowed people who had no interest in code on the VHF and UHF bands, where the primary mode for communication is FM voice or packet. It's not terribly hard at all to pass the test elements for the no-code license. Actually, if someone has even a modicum of common sense, he/she should be able to pass the no-code license because there are only a few technical questions on either and the procedure questions have fairly obvious answers.

I view the code requirement as a part of amateur radio which indicates I am willing to give up a little of my time to learn a new aspect of radio usage. Furthermore, experience while in the military working as a signals intelligence analyst provided me with insight as to the continuing usefulness of CW. When digital signals, SSB voice, or whatever couldn't be understood at the distant end, code came through.

As an amateur radio operator, I am also aware that I may be called upon to provide communications in an emergency. Knowing the code will give me the ability to provide those communications under all conditions.

It's kind of a cool thing to be able to do, too.

Source record: 200847

Hello OM:

As a licensed Ham since July 7th, 1961, thank you for your information. I never read anything about the history of licensing. Wonder where your information is derived. I would like to read more. Historical background on our hobby has always been an interesting subject for me to wonder about. I recall being amazed while reading a friend's 1922 QST issue. I think many of us would enjoy reading about the history of Ham Radio and the licensing structure.

Thanks again es 73s,

Vince

Why is it that you go out of your way to be such a jackass? The
gentleman asked for information and Jeff responded to him with some
specific recommendations that are relavant to the original post.
Nothing more, nothing less. You offer NOTHING constructive but take
the time to "cheap shot" Jeff and use him as a platform for your own
agenda. Why not follow some of your own advise from one of your other
posts (see below).

For Trade:

I have 2 NEW TESTED 8122 Tubes from Berle Elect.
in the shipping boxes.

I would like to trade them for 2 3-500Z Eimac tubes,
new or a pair that has full output and not brown.

I would sell them for $200.00

Thank You,

Boyd N6DMF

554. Toshiba T-1000 Battery hack....

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-08 00:00:00 UTC
From: eudoh@crl.com
Message-ID: <5iejnk$9lo@crl3.crl.com>
Source record: 200856
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Toshiba T-1000

B A T T E R Y H A C K

This is a basic battery modification or hack for the Toshiba T-1000
laptop which allows you to use AA (alkaline or Nicad) batteries.
The nicads are preferable since I've found those to last longer, and also
to be rechargeable using the 9 volt DC power brick that is used with the
laptop.

The main required item is the black, 4 - AA battery battery holder, used
originally for the CMOS battery backup in the early AT's before the new
battery packs (which included nicad batteries) were put out.

```
black red
= (-) = (+)
cut = =
------------------|---=--------=-----
| - | + | - | + |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| + | - | + | - |
------------------|------------------
cut

= = = =
= = = = = = =
= (connection 1) =
= =
= =
= = = = = = = = = = = = = =
(connection 2)
```

Required Items:

.1 Toshiba T-1000 battery
.1 4 - AA battery holder (Radio Shack 270-391)
.1 small saw or etco blade/knife
.1 30-35 Watt soldering iron

.1 Standard rosin core solder
.1 Piece of small gauge insulated wire
.1 Screw (same size of that used in the battery compartment but at least
1/4" of an inch longer.

The first order of business is to cut the holder in half at the "cut"
point indicated in the picture above. The saw worked best for me.
Be careful not to cut the black wire which is represented in the photo above
as "connection 2", unless you don't mind soldering or piecing it back together
later. You will have to cut "connection 1" and solder a piece of insulated
wire between it.
At this point you will need your original battery. First, cut all 4
leads going to the battery as close as you can get to the battery. Solder
the 2 black leads together with the black lead coming from your new battery
pack. Solder the 2 red leads together with the red lead coming from your
new battery pack.

The Modification is complete at this point.

UPDATE:
If you have an internal modem installed, please proceed, but ignore section z
below...
If you don't have an internal modem installed, please skip to section z below.
You will not use the T-1000 battery compartment,but will need 2 pieces of
cardboard
to pad the area beneath it 'cause the 2 pieces of the battery holder will
be laid flat. So a piece of card board beneath and on top of the battery
holders to prevent anything from possibly shorting out either the motherboard,
internal modem, or battery holders.

z.
Placing the 2 pieces of the battery holder "back to back" will allow them
to fit in the T-1000 battery compartment.
The battery lid will not go on unless you replace the screw with one that
is a little longer.

Thank you and enjoy....

I never said that code was useless, it has a place and in fact I use it
from time to time.

>
>It still does not change the fact that it is a requirement for getting
>onto HF.

It is now a requirement but I do not think that it should be forever.
Times change and we should explore the possibility of change without
all of the invective.

>
>My point is for those that have not passed their code YET, to stop
>whining pass the code and then put it in the closet. Then they will
>have all of the HF bandwidth they want.

But what you said explicitly was that I should stop whining without
bothering to check if I had passed code or not. Checking is easy to do
but the "stop whining" response seem to be so automatic that it gets
used when it is just plain foolish to do so. Why say that to someone
who has an HF license?

>
>Just that easy. I think the engry that most folks waste fussing about
>the things they don't want to do is a shame.

Things don't get changed if people don't make a fuss. Look at the fall
of the Soviet Union and its client states, a very god thing resulting
from people fussing.
>
>I don't use my code. I passed my code to get HF. I will most likely
>never use it again. But, I don't use PACTOR either and I had to
answer
>questions about it in order to pass my exam.

Ah yes but the Pactor question was not a pass/fail gateway to HF for
you, the code test was and that is the rub. I would not object to a
code test in perspective. I don't want to see code die but even more I
don't want to see it kill the hobby.
>
>I don't plan to contine explaining myself to you anymore. Congrats on

>the Advanced ticket. You passed your code apparently because you
wanted
>something....my guess is HF access.......let's see could the others do
>that as well?

I didn't really want HF access all that much. As a technocrat the stuff above 50MHz is really more interesting to me. No I tested for two reasons. VEs are getting hard to come by and I needed to upgrade to help with that effort. Secondly I really thought to have credibility in the code test debate I should have taken the test.

>
>Good Luck to you in your efforts to open the HF airwaves to those too
>lazy to put forth enough effort to pass the code.

Not at all what I want I would like to see the hobby develop in a way that young people would be more interested and technical experts attracted. Look at the way Carl and Len are treated on these news groups. If you read either of them, when they have not been provoked to the point of loosing their tempers, they make very good points. Len is well known in his field and those with a lick of sense would welcome him for what he knows not what tests he has passed.
>
>Happy RFing!
>
>Have a nice day!
>--
>Keith - KT4VQ

Consider the points I have tried to raise and in turn I apolgize for my loss of temper. I worked very hard to pass those code exams it is not a matter of a "couple of weeks of effort" for everyone I assure you. That is why I get a little testy about it.

well, in most cases, the work you did in school consisted of studying a large amount of material only to cough up a few answers such as "who's buried in grant's tomb?". or what happened in 1066 or compute the circumference of a flower garden 3 feet from center to edge.

if the tests were so terribly easy, i should never see any failures at the radio exams. last time around i think we had 6 of 18 that qualified for a license. and we only had about 7 or 8 unlicensed people at the exam...

actually, i'd bet if i picked ten questions at random from the novice pool and took them to a large radio club made up of long licensed hams, i'd bet at best i'd only see an average of 5-7 questions right across the entire group. since the tests are entry exams, you'd think that those in the service the longest would have the easiest time..right?

Esperanto was designed to be easy to learn, much easier than any
of the contemporary languages. By incorporating Roman roots and thus
popular vocabulary spanning several European languages, those using
one of these languages could get a head start. I remember being shown
a letter in Esperanto from a ham in Austria. Knowing some German,
English and Polish I could read most of it.

Esperanto had a better shot at the time when it was developed because
then French, English and German all fought for supremacy. Eventually
English won, a language easy to start but hard to master.

Hi all KC7OXD here!
I own a Baycom packet modem like the one in the last 2 issues of QST. I am having a problem with the modem locking in send mode I suspect because of interference caused by either the radio or the computer. If anyone has had experience with a Baycom modem and has any suggestions I would appreciate the help.

Thanks All
KC7OXD

No, you don't need to change anything on the radio. Just connect
DG-5 to radio. If I remember correctly the DG-5 picks off L.O.
frequency of radio and heterodyne it to display actual working
freq. I hooked one up for my Ham buddy long time ago once. This is
all I could remember now.

P.S. Some people are so narrow/tunnel visioned. They are everywhere not
only in our hobby. If you want something, work for it instead of
making zillion excuses and/or whining.

580. SOLAR FLARE DISTURBANCE UPDATE

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5ih7qs$f281@mars.online.uleth.ca>
Source record: 200690
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

The large solar coronal mass ejection disturbance is expected to impact with the Earth anytime over the next 24 hours. The SOHO team operating the LASCO EIT and WAVES instruments that detected this disturbance expect this disturbance to arrive by about 00:00 UTC on 10 April (within the next hour). The forecasters at the Space Environment Center are expecting the disturbance to arrive at about 12:00 UTC on 10 April. Suffice it to say, it should arrive within the next 24 hours. Arrival times have been based on different data derived from the activity observed on 07 April. Data based strictly on ground-based flare-related information originally suggested the disturbance may not arrive until late on 10 April or early on 11 April. Our original forecast was based on this preliminary data.

Data now appears to favour an earlier arrival time, probably closer to the Space Environment Center derived times.

The resulting geophysical disturbance is expected to be moderate in strength. There is the potential for geomagnetic activity to surpass minor storm levels with periods of major storming possible over short periods from middle and high latitude regions. Auroral activity should become substantially more enhanced with equatorward migration of the auroral ovals providing a greater probability for observing auroral activity from the middle latitudes.

Ionospheric radio communications in the HF bands is expected to be initially enhanced for a few hours following the arrival of the disturbance, followed by a rapid period of degradation that should persist through to about 12 April. High and polar latitude paths should be most strongly affected with increased absorption, fading and multipathing. Transpolar and transauroral circuits will be hardest hit with periods of poor to very poor propagation expected about 6 to 12 hours after the disturbance arrives, coinciding with sometime after about 06:00 to 18:00 UTC on 10 April. Propagation probably won't improve considerably on 11 April. Middle latitude paths should see fairer conditions with periods of fair to very poor propagation occurring during the local night sectors, particularly on the upper-middle latitude circuits that cross nearer the expanded auroral ovals.

Current REALTIME conditions (solar, geomagnetic, ionospheric and MUCH more) can be obtained using our Solar Warning And Realtime Monitor (SWARM) software. Information is available at: http://solar.uleth.ca/solar/www/swarm.html.

Current near-realtime updated global maps of ionospheric characteristics can be found at: http://solar.uleth.ca/solar. For instance, a map of maximum usable frequencies is at: http://solar.uleth.ca/solar/www/realtime.html

We have issued middle latitude auroral activity watches for 10 through 12 April, as well as a potential geomagnetic storm warning for the same time period.

Well Pom, Modern English is over 200 years old (although spelling was
only standardized about 190 years ago) yet you still use that "mode"
on the air. The telephone is about 120 years old yet you still use
it to communicate daily. Seems these older communication styles are
still around because of their proven effectiveness.

"... a complete waste of valuable time..." is subjective; I feel going
to a movie theater and watching TV (except for PBS and CNN) are a
complete wastes of vaulable time, but few would agree with me.

Did you mention to your colleagues that over 97% of the US amateur
spectrum (up through 23 cm band) is available code free? Shame on
you if you didn't.

Nope. Step C Lecturer - that's the highest pay grade for Lecturers
(what UH calls "Lecturer" some other universities call "Adjunct").

I've been teaching at the university level for 10 years now. I've also
been a Lecturer for Chaminade University, and Hawaii Pacific University,
both private schools.

>where he's been working on his degree for about
>10 years

Negative. Sounds as if you've been listening to Jerry's lies. I
already have my Masters in Pure Math. Been in the PhD program
now for 6 years. Why so long? I place priority in my teaching
duties over my graduate work.

>(4 years or so is normal, I'm told) ...

I don't know of anyone who has done a PhD in an area of Pure Math
in just 4 years. Six to seven years seems normal, according to
the AMS.

>maybe it has to
>do with the fact that he can't convert Watts to dBm without
>coming up with an answer that's off by 60 dB ???

One mo' time: 1mW = 1W*10^(-3), agreed? Now apply the logarithm function
to both sides. That gives log(1mW) = log(1W) - 3, or
10*log(1mW) = 10*log(1W) - 30. Let's have some fun; see if you can
determine why this is different than the "standard" formula. (Apparently
you can't since you keep saying the above is not valid.) (The above is
what could be called a math "practical joke".)

Can we meet on the air?

I am the way I am because as a teen I was an active ham radio operator. I used "the mike" to not face real people thus missing my teen years the way real people experience it. It is not ham radio's fault of course, the fault is entirely mine. However I am not that person now and I despise in others what I despised in myself. I am much like a reformed smoker (they tend to be fanatics against smoking). When I hear hams on the air blabbing on about nothing, doing nothing, being nothing, kissing each others butts so much their lips turn brown I want to anything other than be like them. Further I was a gutless wimp up to 18 years of age (fit
in well with ham radio), I would cower with the slightest threat but I learned that fear is far worse than being beat up and rarely would have anyone beat me anyway. So today if you want to threaten me the odds are high (especially if you are a ham) that nothing will ever be carried out. And if threatened I always tell the person to carry out the threat even if my acts that caused the threat were wrong because once you threaten me that closes the door as to the legitimacy of your cause.

To those folks in the ASD support group much of the above applies. Most of you are uncaring men whose spouses finally wised up (hams make great uncaring spouses). In the end I am a far deeper and caring person than 90% of you. And to those that PERSONALLY insult me and/or use profanity, those acts say so far more about you than I. If you read my mail carefully you will rarely see me personally insult anyone and rarely will I use profanity. I argue ON THE MERITS. When you see someone attack the person it means their cause is without foundation.

592. Logging Program??

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: Craig Murray <cmurray@apci.net>
Message-ID: <01bc44a3$67458aa0$5d2464ce@mutt>
Source record: 200730

Does anyone know of a good shareware logging program mainly for CW?? I have heard that there are such programs that will send for you during a contest, even the contacting station by typing in the call sign. I'm really looking for a good program to make Field Day a little easier. We have several rookies this year participating with the HF station and I'm trying to make the learning a little easier.

Thanks for any help,

Craig AA9UD

Here's the reset(s):
Yaesu manual: Press and hold the skip/mr and pri/vfo buttons while
turning the rig on.
Reset for moded 530: (1)Press and hold the skip/mr and pri/vfo buttons
while turning the rig on; (2) Turn radio off; (3) Press both the
'up' and 'down' buttons. Then turn radio on while still holding down
the 'up' and 'down' buttons; (4) If mod is not enabled, repeat step 3.

The world is full of people who have no idea what is going on,
but they sure know who they want to see running the joint.

I have seen remarks, "Lose the code or lose the hobby".
THIS IS NOT A HOBBY, IT IS A SERVICE.

Look It Up. In the Govt Regs that create the system.

The value of code is not the ability to shoe dedication, it is
demonstration of the ability to add to the "Large pool of skilled
operators in time of emergency."

Cry babies.

The ARRL (your epithet is better than mine) is not the problem.
They are just a symptom.

I said on a ham NG that I have discovered a way to transmit
voice or even music on a bandwidth of under 100 hertz, and
out of about 50 responses I have seen so far including e-mail,
I have seen maybe 5 that were anything but some version of
"It can't work." Some of the most reasonable sounding of these
ignores that I asked how to put it out without having some snert
steal it. they may wish to be the snerts. I don't know. But so far,
any effort I have made to bring this to the public through Ham
radio faces more opposition from hams than anything I have
tried anywhere, and as a PROLIFIC inventor, I have tried a lot.

Amateur Radio Service asks for what it gets, good or bad.

there are several very good arguements on all sides, but it might be
an idea to have a general 5-word requirement, so the ham COULD
send code if he/she had to.

Depend on it, there are cases every year that prove that no skill is
eveer out of date, unlessit crowds out stuff needed worse.

The better CW users like to squeeze their bands as narrow as possible,

so they can't be said to be crowding any one at all.

The worse users exist in all modes.

May I suggest a general five-word requirement?

write FCC, address from your library, ask for data re low-power
unlicensed transmission for experimentation.

Better yet, get a ham ticket (stay with novice for a while)
and use an old ARRL handbook or old QST, or 73 or CQ 0r HR mags
for plans (we call 'em schematics) for radios of any kind you can
want, or the articles will help you learn how to design your own.

gud luk

605. FCC Q & A FAQ re Vanity Call Signs and Processing Info

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: Bart Jahnke <vec@arrl.org>
Message-ID: <334BA053.6DAC@arrl.org>
Source record: 200743

The FCC today has released a fresh batch of some 435 Vanity callsigns from Gate 1, 1A and 2 applications as received between March 5, 1997 and March 31, 1997. Of some 912 applications received, 435 were granted while another 477 went off line for manual (WIPS) review.

FCC has not yet announced the opening dates of Gate 3 or Gate 4.

The following information is available from the FCC Amateur Radio web page at:

http://www.fcc.gov/wtb/amradsrv.html

73, Bart J. Jahnke W9JJ - ARRL VEC Manager - vec@arrl.org
==========

Vanity Call Sign System

Answers to Frequently Asked Questions:

The following are answers to frequently asked questions about the amateur station vanity call
sign system. Part 97 of the Commission's Rules, 47 C.F.R. Part 97 ("rules"), contains the regulations for the amateur radio services.

PROCEDURES

Q. What are the procedures for the vanity call sign system?

A. They are described in FCC FACT SHEET PR5000 #206-V ("FS #206-V"). You should, moreover, be
familiar with the sequential call sign system described in FCC FACT SHEET PR-5000 #206-S ("FS
#206-S"). Both fact sheets are available at http://www.fcc.gov/wtb/amradsrv.html.

Q. What does the vanity call sign system offer me, an amateur operator?

A. The system offers you the opportunity to request a specific call for your primary station
and for your club station.

Q. Is a military recreation station eligible for a vanity call sign?

A. No. Section 97.19 of the rules states that military recreation and RACES stations are not
eligible to request a vanity call sign.

Q. May the same call sign be assigned to more than one station?

A. No.

PROVISIONS

Q. What are the provisions under which I may request a vanity call sign for my primary station?

A. There are three provisions for primary stations:

(1) first-come-first-served,

(2) former holder, and

(3) close relative of former holder now deceased.

Q. What are the provisions under which our club may request a vanity call sign for our club station?

A. There are three provisions for club stations:

(1) first-come-first-served,

(2) former holder, and

(3) in memoriam.

Q. How can I make a list of call signs that are not assigned to some other station?

A. Make a preliminary list of call signs you prefer. FS #206-S explains the prefixes and suffixes for the nearly 15,000,000 possible call sign combinations. Next, access the amateur
service data base. It lists over 700,000 call signs that are currently assigned. Strike from
your preliminary list those call signs already assigned. Then rearrange in your order of preference the call signs remaining on your list.

Q. How accurate is the data base?

A. It is updated daily to add new license grants, make modifications to existing license grants and to purge expired license grants.

Q. How can I gain access to your data base?

A. Several parties within the amateur service community download the FCC zip files regularly
and make the information available in a convenient to use format. Try: http:

//www.arrl.org/fcc/fccld.html

//www.ualr.edu/~hamradio/

//www.qrz.com/cgi-bin/webcall

//www.rdatasys.com/~mdowning/fcc/callsign.html

//www.buck.com/cgi-bin/do_hamcall

//www.webbuild.com/~ki4hn/vanitytd.html

Q. All of the call signs I would like to have are currently assigned. But some of them are nearing expiration. If the current licensee does not renew, how soon after the license expires will the call sign become assignable?

A. A call sign becomes assignable under the first-come-first-served provisions two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio
or death of the grantee. When the holder dies, however, the call sign becomes assignable immediately under the formerholder, close relative of former holder now deceased, and in memoriam provisions.

Q. What is the reason for the two year delay?

A. In the Report and Order in PR Docket 93-305, 10 FCC Rcd 1039 (1995), persuasive comments showed that a two-year period is necessary before a call sign again becomes assignable in order to avoid confusion in over-the-air station identification, to maintain accuracy in the
licensee data base, and to accommodate QSL bureaus. Further, the commenters believed that it
would preclude "trafficking in licenses" where a licensee, in exchange for some type of consideration, vacates a desirable call sign so that another licensee could immediately apply
for it before its assignability becomesknown generally. A two-year interval, moreover, makes
the assignability of vacated call signs consistent with the assignability of a deceased person's station call sign, or a licensee's expired station call sign. Q. I want to request the call sign of a close friend who died more than two years ago. But his license information
still appears on your data base. What should I do?

A. The information appears on our data base because the expiration date has not been reached
and because the FCC has not received proper notification of the person's death. To do that, send a copy of the death certificate or a copy of the obituary that contains the date of the
death for the deceased to: FCC, 1270 Fairfield Road, Gettysburg, PA 17325-7245. After you confirm that the information has been purged from our licensee data base, you should file your request promptly. The call sign will not be held for you.

Q. I understand that I must use FCC Form 610-V to apply for a vanity call sign. How can I obtain a copy?

A. The interactive version is at fcc.gov/wtb/amradsrv.html. It is also available for downloading from http://www.fcc.gov/formpage.html, from the Fax-on-demand system by calling
(202) 418-0177 from the handset of a fax machine, or from the FCC forms contractor by calling
(800) 418-FORM.

Q. I don't understand an item on the interactive FCC Form 610-V. How do I access the instructions?

A. Click your mouse once with its pointer on the highlighted portion of the item for which you need help.

Q. What number do I enter for my "FCC Account Number"?

A. If you do not have a number from a prior transaction, enter your Social Security number, your Taxpayer ID number or your ten-digit telephone number.

FIRST-COME-FIRST-SERVED PROVISIONS

Q. I have never held another call sign and I have no deceased close relatives that were hams.
Under which provisions am I eligible for a vanity call sign?

A. You are eligible under the first-come-first-served provisions. Currently, however, only Amateur Extra Class operators may apply under these provisions. Eventually, all operator classes will be eligible.

Q. When will Advanced Class operators become eligible to request a vanity call sign under the
first-come-first-served provisions?

A. The dates for Advanced Class operators (Gate 3) and for all remaining classes (Gate 4) to
start requesting vanity call signs under the first-come-first-served provisions have not been
determined. As explained in the Report and Order in PR Docket No. 93-305, 10 FCC Rcd 1039 (1995), one of the purposes of the starting gates is to validate the system procedures and alert the FCC to any adjustments needed. The experience gained in administering a new autogrant system under Gates 1, 1(A) and 2, along with information from interested amateur operators who call our attention to discrepancies, is being used to improve the system so that it will function smoothly.

Q. How can I increase my chances of being at the head of the line when the gate for my license class opens?

A. File your application electronically as early as you can after the gate opens.

Q. Do I have to wait until the gate opens before I mail (or express) my application or can I
"time" it to arrive on the opening day?

A. You might be successful in sending your application document slightly ahead of the opening
day, just as long as it does not arrive at the fee contractor before the starting gate actually opens. If it arrives ahead of the announced opening of the starting gate, however, it will be dismissed.

Q. Can I use the "wildcard" (examples: W9** or *9**) to request a call sign with a format having a single letter prefix and a two letter suffix
(examples: K9AA, N9AZ, W9ZZ)?

A. No. The exact prefix, numeral, and suffix must be given for each call sign, otherwise your
application will be dismissed. List up to 25 call signs in order of your preference.

Q. My spouse and I are both hams. We want to obtain call signs having the same suffix. Will that occur if we were to file our applications stapled together?

A. Probably not. The information on each application is entered separately into the autogrant
system.

Q. What if I obtain my vanity call sign first, and then my wife applies listing 25 call signs
having the same suffix as mine?

A. That should increase your chances.

Q. I am an Amateur Extra Class operator and my mailing address is in (one of the 48 contiguous states). What are the formats and prefixes of the call signs that I may request?

A. Under the first-come-first-served provisions, an Amateur Extra Class operator at your mailing address can request Group A, B, C or D call signsas designated in FS #206-S for stations having mailing addresses in Regions 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10. As an Amateur Extra Class operator, you are eligible to file now.

Q. I am an Advanced Class operator and my mailing address is on Guam. From which call sign groups can I request a vanity call sign?

A. Advanced Class operators become eligible to file under the first-come-first-served provisions at Gate 3. At that time, an Advanced Class operator at your mailing address can request Group B, C or D call signs, as designated in FS #206-S for stations having mailing addresses on Guam. You can also request Group B, C or D call signs, as designated in #206-S for stations having mailing addresses in Regions 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10.

Q. My mailing address is in (one of the 48 contiguous states). May I request one of those Group A call signs designated in FS #206-S for Navassa Island?

A. No. Navassa Island is in the Caribbean Insular Area. FS #206-V provides that only licensees with mailing addresses in Alaska, Hawaii or the Pacific or Caribbean Insular Areas
can request a call sign designated in FS #206-S for licensees with mailing addresses for those places. You do not have a mailing address on Navassa Island. Section 97.23(a) of the rules, moreover, requires you to have a mailing address where you can receive mail delivery by the United States Postal Service. Unless and until such delivery is established for Navassa Island, the call signs designated in #206-S for stations having mailing addresses there are not assignable.

Q. Which other areas do not currently receive mail delivery by the United States Postal Service?

Q. There is no mail delivery by the United States Postal Service to Navassa and Desecheo Islands in the Caribbean Insular Area. In the Pacific Insular Area, there is no mail delivery
by the United States Postal Service to Baker, Howland, Johnston, Palmyra and Jarvis Islands and to Kingman Reef.

Q. I am in the military overseas. My mailing address is APO New York, NY. My operator class is General. What call sign format and prefix may I request?

A. As a General Class operator, you become eligible to file under the first-come-first-served
provisions at Gate 4. Then you can request Group C or D call signs, as designated in FS

#206-S for stations having mailing addresses in Regions 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10.

FORMER HOLDER PROVISIONS

Q. I recently returned to amateur radio as a codeless Technician. Many years ago, I held a Class A amateur operator license. My old call sign is in Group A. Am I eligible to get it back?

A. Yes. You are eligible to file now under the former holder provisions. Under the former holder provisions, not having an Amateur Extra Class operator license does not preclude you from requesting your former call sign.

Q. Am I eligible to get my old Novice Call sign back with the N in the prefix?

A. Yes. As a former holder, you are eligible to file now under the former holder provisions.

Q. I was a Novice in the 1950s. My call sign was KN2HHR (example). Had I upgraded, I would have received K2HHR but I let the license expire when the one-year term was up. Now I am a codeless Technician. Am I eligible for K2HHR under the former holder provisions?

A. No. You are not a former holder of K2HHR.

Q. Am I eligible for my former call sign KZ5XX (example) that I had while in the Canal Zone?

A. Yes. You are considered a former holder although your former license was issued by the Department of Interior. The KZ5 call sign prefix was returned to the FCC. You are eligible to
file now under the former holder provisions.

Q. Now that I have my new vanity call sign, I realize that I would rather have the call sign
I just vacated. Can I get it back?

A. Yes. You are eligible to file another application, with a new fee, under the former holder
provisions.

Q. Can I request that the call sign I vacated be assigned to my new club station under the former holder provisions?

A. No. Your club station was not the holder of the call sign you vacated. After two years, your club station license trustee might apply for it under the first-come-first-served provisions.

CLOSE RELATIVE OF FORMER HOLDER PROVISIONS

Q. My father intends to request his former call sign under the former holder provisions. The
Group C call sign he will be vacating was once held by my uncle, now deceased. As a Technician, am I eligible to request my father's vacated call sign immediately?

A. Yes. You are eligible to request your uncle's former call sign under the close relative of
former holder now deceased provisions as soon as it is purged from the data base.

Q. My grandfather, now deceased, held a Group A call sign although he was an Advanced Class operator. I am also an Advanced Class operator. May I request his former call sign under the
close relative of former holder now deceased provisions?

A. No, not unless you upgrade to Amateur Extra Class. For a Group A call sign, you must hold
Amateur Extra Class as shown in FS #206-S. Unlike the former holder provisions, under close relative of former holder now deceased provisions, you must have the proper class of operator
license for the group in which the call sign you are requesting corresponds.

Q. Many years ago, my deceased grandfather's station's call sign had only a number as the prefix (for example, 3BE). Can I request that call sign?

A. No. Call signs having only a number in the prefix are no longer assignable to amateur station in the United States. As shown in FS #206-S, FCC-licensed stations have as the prefix
the number 0, 1, 2, 3, 4, 5, 6, 7, 8 or 9 preceded by the single letters K, N or W or by double letters AA-AL, KA-KZ, NA-NZ and WA-WZ.

Q. Some of those old call signs had the prefix "W" added at a later date (for example: W3BE).
Am I eligible for that call sign under the former holder provisions?

A. If it is otherwise assignable and you hold the class of operator license for that call sign group, you are eligible if your close relative actually held the call sign.

Q. I've held my call sign for over 50 years, and I can't bear the thought of it going to some
new ham. Is there some way I can have it retired?

A. No. After you die, however, your radio club can request your call sign under the in memoriam provisions.

Q. Is there any way that I can designate who gets my call sign?

A. No.

Q. Which relative has priority in obtaining my call sign after I die?

A. The applications are processed in receipt date order. If one of your close relatives files
an application electronically, it may arrive before an application filed otherwise by another
of your close relatives.

Q. I do not want to give up my present call sign. But the family doesn't want my deceased father's call sign to be assigned to anyone else. Can we have it set aside or retired?

A. No. You could, however, consent to the call sign being assigned to a club station under the in memoriam provisions.

Q. My best friend stipulated in his will that his call sign should go to me. How do I obtain
it?

A. You may apply for it two years or more after his death under the first-come-first-served provisions.

Q. Do I have any other options?

A. No. His radio club, however, could apply for it under the in memoriam provisions.

Q. Is there some way that I can get a vanity call sign for my primary station and my son can
get my current Group A call sign for his primary station?

A. Possibly under the first-come-first-served provisions. When you obtain a new call sign, you vacate your present call sign. Although it does not become available under the first-come-first-served provisions for two years, there may be other former holders of that call sign, in which case, the call sign becomes available immediately them and to certain clubs under the other provisions. If you die before the end of the two years, however, your close relatives and your club also become eligible to apply for it immediately.

IN MEMORIAM

Q. We want to honor the memory of former members of our club who are now deceased by obtaining their old call signs for our club station. Are there provisions for this?

A. Yes. The in memoriam provisions are specifically for this purpose.

Q. What are the "in memoriam" provisions?

A. They allow amateur radio clubs to apply for the former call signs of deceased members.

Q. How is an in memoriam request different from a first-come-first-served request from a club?

A. An in memoriam request differs from a first-come-first-served request in two ways:

(1) An in memoriam request can be granted immediately upon the death of the holder. A first-come-first-served request can only be granted after the person has been deceased for two years.

(2) An in memoriam request for a call sign, as designated in #206-S for stations having mailing addresses in Regions 11, 12 or 13, does not have to have a mailing address in the region. A first-come-first-served request does unless the requester qualifies under the former holder provisions.

Q. How should we make a request under the in memoriam provisions?

A. Obtain a letter consenting to the assignment from a close relative of the deceased person.
Place the letter into the station records. If your club station license was granted before March 24, 1995, or if your club station license trustee holds the Amateur Extra Class, the application may be filed now. Otherwise, the application may be filed when the gate opens for
the class of license held by your trustee. The license grant must be purged from our records.

Q. But we don't want to give up our present club call signs. Can our club station hold more than one club station license grant?

A. Yes. Unlike a primary station, there is no limit to the number of license grants a club station may hold.

Q. Will the second club station grant also qualify under the "before March 24, 1995" provision?

N. No. The grant will have been made after March 24, 1995.

Q. The member we want to honor died less then two years ago. Are we still eligible to apply?

A. Yes. The two year requirement does not apply for requests under the in memoriam provisions.

Q. Our club station only recently received a license grant. How can we obtain the former call
sign of a deceased member for our club station?

A. If the club station license trustee is Amateur Extra Class, the application may be filed now under the in memoriam provisions. If the member has been dead for at least two years, the
application can also be filed now under the first-come-first-served provisions. If the club station license trustee is Advanced Class, the application can be filed beginning at Gate 3.
If the club station license trustee holds any other class, the application can be filed beginning at Gate 4.

Q. We want to honor the memory of a non-member of our club who is now deceased by obtaining his old call sign for our club station. How can we do this?

A. If the person died more than two years ago, the call sign is assignable under the first-come-first-served provisions. A club can apply now if the trustee is Amateur Extra Class, at Gate 3 if Advanced Class, or at Gate 4 if General, Technician Plus or Technician class.

Q. But the person just died. Do we have to wait two years?

A. Yes.

SUPPORTING DOCUMENTATION

Q. What supporting documentation is acceptable in order to request a call sign under the former holder, close relative of former holder now deceased, and in memoriam provisions.

A. Your supporting documentation must be sufficient to withstand a challenge to your assertion from another party. Documentation of close relationship to deceased former holder
can be critical.

Q. Should I send my supporting documentation to the FCC?

A. Not unless and until you are specifically instructed to do so. You should place your supporting documentation into your station records so that you can quickly respond to a request for verification from the FCC. The autogrant system does not include any review of any document attached to Form 610-V.

Q. I do not have the license document showing that my late father once held the call sign that I am requesting. Is that information in the FCC licensee data base?

A. No, unless your father died so recently that the information has not yet been purged from
the data base. You can use the services of a private contractor authorized to search license
and application information in the FCC's archived records. The current contractor is:

International Transcription Services, 2100 M Street NW, Washington, DC 20037 (202) 857-3800,
or 1270 Fairfield Road, Gettysburg, PA 17325 (717) 337-1433

VANITY CALL SIGNS FOR CLUB STATIONS

Q. What is the purpose of a "club station" license?

A. A club station license makes it possible for members of an amateur radio club to have a station operated under a unique call sign. It conveys no operating privileges.

Q. What are the requirements for a club station license grant?

A. Section 97.5(b)(1) of the rules states that a club must have:

1. A name,

2. A document of organization,

3. Management,

4. A primary purpose devoted to amateur service activities consistent with the rules,

5. At least two members,

6. A license trustee designated by an officer of the club, and

7. A license trustee who holds an Amateur Extra, Advanced, General, Technician Plus or Technician Class operator license grant.

Q. How can I obtain a vanity call sign for our club station?

A. First, obtain a club station license grant using FCC Form 610-B. Order the form by calling
800-418-FORM. After the license has been granted, your club's license trustee may file an application for the vanity call sign under the first-come-first-served provisions when the starting gate opens for the class of operator license your trustee holds.

Q. For which call signs is our club station eligible?

A. Your club station has the same first-come-first-served provisions eligibility as does its
license trustee. It may also have eligibility under the former holder and in memoriam provisions.

Q. Can the club station license trustee apply for a call sign that was formerly assigned to his primary station?

A. Yes, but only under first-come-first-served provisions. The former holder provisions, however, apply only to a call sign formerly assigned to the club station.

Q. I want a vanity call sign and I also want to retain my present call sign. Is there some way that I can get a vanity call sign for my primary station and move my present call sign to
a new club station?

A. Possibly under the first-come-first-served provisions. When you vacate your present call
sign, it becomes available to certain persons and clubs that qualify for it under the other provisions. Depending upon the likelihood of that occurring, you might consider requesting the vanity call sign for your club station.

Q. Our club has decided to disband. Is there a special provision for a member of the club to
obtain the club station's call sign for my primary station?

A. No. It will become available under the first-come-first-served provisions two years after
the license document is received for cancellation by the FCC at 1270 Fairfield Road, Gettysburg, PA 17325-7245.

This page was created March 28, 1997.

I have one ICOM IC-24AT and I don't know for what reason the processor will work like an IC-24ET. The range of TX freq. is 144-146 mHz VHF and 430-440 mHz UHF. Originaly this radio will be trnasmit over the US range.

If you have any hint, e-mail me at evincent@mediom.qc.ca

Thank you.

> i'd bet at best i'd only see an average of 5-7 questions right across
> the entire group. since the tests are entry exams, you'd think that
> those in the service the longest would have the easiest time..right?

That's a big part of the problem, Bill and I'm glad that you bring it up.

In point of fact, a huge portion of presently licensed hams only barely
squeaked past the test on luck, short-term memorization, and a few
good guesses and then told themselves "I've passed the test, I know
all that's necessary to know" and then promptly fell asleep only to be
wakened by the need to say "UR 599, PSE QSL" at some opportune
time so they could get another postcard to plaster on their wall so they
can lie to themselves about what great, SOTA communicators they are ...
They've been in that state for years and have fallen so far behind in
terms of the changes in technology that they don't even realize how
far behind they are ... it's like they've fallen into a well that's so deep
they can't see all the way to the surface ...

The point that you make is a serious problem for our service and I
feel very strongly that it points to a rather critical need for retesting
at
renewal time. This is a change in the rules that I would strongly
support because I think it is perhaps the ONLY way to overcome
the laziness and stagnation that have become so prominent in our
ranks. I know the slackards, yackers, gamers, cheapskates, and
others will bitch, whine, moan, and generally pitch a fit over the idea
of having to prove themselves qualified at each renewal, but too bad.
(many other things that require licenses require periodic recertification)

The technology of communications (which we're supposed to be
keeping up with ... even advancing) is moving so fast that it's absurd
to claim one is qualified today because one passed a test on tube
theory 30 years ago, then sat down to chase DX and never learned
another thing ... I am absolutely certain that there are still many OTs
who used to build their own rigs (when tubes were the thing) but stopped
years ago because "those damned transistor thingies are too small
and confusing ..." These folks USED to be qualified, but they didn't

keep up with the progress of technology and now they're so far behind
that they don't have a clue ...

Bear in mind that I'm NOT saying that EVERYONE who's been licensed
for more than a few years is like this, but the reality is that there is a
huge portion of the ham population that *IS* ...

That this can happen says that there's something fundamentally wrong
with our licensing and testing system ... there are other things wrong,
too, but retesting at renewal time would at least assure that people
remained reasonably competent by keeping up with the inevitable
changes in technology ...

608. PLEASE HELP

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: Bo Henderson <bo@physitron.com>
Message-ID: <334B9C6E.2364@physitron.com>
Source record: 200746

I have a serious noise problem with my HF mobile. I have tried several
things already without success. I have a TS-50 in a JEEP Wrangler.
Have used both a bugcatcher and hamstick antenna and get the same
results. No noise with the engine completely off. No noise with the
antenna out of the mount. With the engine running I have:

On 80 & 40 m -- very low S1 ignition noise.
On 20 m -- S-9 without the noise blanker. S-7 with the noise blanker.
On 17, 15, 12 10 I have progressively less noise. S-2 on 10 m.

The noise is a combination of fuel pump and other frying noise.

I have so far:
1. Put .01 Micro F to ground from the fuel pump leads about 1 foot from
the pump.
2. Put 100 mH inductors in series in the fuel pump leads.
3. Grounded the hood to the body.
4. Grounded the radio to the body.
5. Grounded the car body to the frame about half way back.
6. Grounded the exhaust pipe to the frame at the back.
7. The radio power is directly off of the battery.

Do any of you HF mobileers have any suggestions???

1. Is the capacitor inductor combination a problem??
2. Is 1 foot away to far away from the fuel pump??

Any suggestions would be appreciated.... REgards Bo

As my header points out,I'm having a problem with the mic on this radio.The buttons seem to work whenever they want. It doesn't do it all the time. (example) I push the call button and nothing happens, and after 5 or 6 presses it works. Is this a common problem with this mic or do I just happen to have a bad mic? Thanks N2OMU

Craig Murray wrote:

> Does anyone know of a good shareware logging program mainly for CW?

Try "NA" by K8CC or "CT" by K1EA. These are a couple of contest
logging programs, and there are others too but the names escape me
at the moment.

Neither of these is shareware, however, and I don't know of any
shareware contest programs. Maybe someone else does and will
chime in here.

==========

Reuters Hourly News Summary

Solar Storm May Hit Power Grid

NASA says a big storm on the surface of the sun will hit Earth's magnetic field today with the potential to disrupt communications satellites and power grids. A NASA official described the solar storm as a "big event'' in which matter blown off the face of the sun would strike a "glancing blow'' to the magnetic field that shields the Earth more than 100 miles from its surface. Operators of sensitive satellites and power grids have been warned to take precautions. Scientists still are calculating the precise arrival time of the solar impact, which is likely to produce a shimmering curtain of multi-colored light called an aurora over the North and South poles.

Source record: 200754

My ancestors came from Sogndal, Norway in 1870. I am descended from the Stedje's and the ancestors that came to the US had worked on the Foss farm and kept that name. I don't have a radio yet but I just got my license. I plan to be on the air in June or July and I thought it would be neat to have a QSO with someone from Sogndal. Incidentally, I visited Sogndal in 1992.

617. Random triva related to Ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: martin@ftp.com
Message-ID: <860607544.27098@dejanews.com>
Source record: 200755

As a teen in the late 70's and early 80's, I subscribed to a magazine called "Popular Electronics". I built many projects, and spent most of my money on parts. I lost interest in building electronics when mass market products became cheaper than their parts.

Around this time the editors changed the name and focus of the magazine to "Computers and Electronics". But they missed the mark because their focus was on hardware, not software, and their magazine went belly up. I became interested in software, because it was the area to tinker in. Once you bought the computer all tinkering was free (this was before compilers and quarterly updates).

I mention this because "Popular Electronics" was originally called "Radio Electronics". I thought some older Hams may have read it, saw it transition from their hobby to one of broader appeal, and might have stopped reading it at that point.

This magazine played a big role in the micro computer industry because they featured several stories on building your own machine. But their love of hardware blinded them to where the world was really going.

618. Solar flare heading toward Earth (4/9/97, in afternoon EDT)

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: Mark Ellis <mellis@ramcad.pica.army.mil>
Message-ID: <E8DnCF.7yG@pica.army.mil>
Source record: 200756
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.space

From www.cnn.com:

Solar flare heading toward Earth
Web posted at: 11:09 p.m. EDT (0309 GMT)
(CNN) -- The sun has produced a storm the likes of which scientists have not seen before, according to a NASA researcher.
The large flare of magnetic energy is expected to hit Earth's upper atmosphere Wednesday afternoon, according to Art Poland, senior scientist with the Solar and Heliosphere Observatory (SOHO) at the Goddard Space Center in Maryland.
SOHO is a relatively new NASA satellite that is pointed at the sun.
The solar flare was formed Monday when the sun generated a giant shock wave of electrified gases called a coronal mass ejection. SOHO photographs show "a flare going off; you see a shock wave leaving (the sun). Basically, it's a tsunami going across the surface of the sun," Poland said in an interview with CNN.
Solar events like this occur every day. Approximately one in 10 heads toward Earth. But this solar flare is about as large as one that destroyed a broadcast satellite in January.
There have been 43 cases of satellite damage as a result of solar flares, according to astrophysicist George Lake, a NASA project scientist. The flares inflict damage by sending a powerful current through the satellites, creating "miniature power plants," according to Lake.
Scientists say they don't know exactly what kind of problems this solar event could cause and what is in its path. Solar-monitoring satellites will provide only one hour's notice of the wave's arrival. Similar events have triggered power outages and interfered with spacecraft operations.
"If the magnetic orientation is opposite to the Earth's magnetic field and all the conditions are right -- what that means I don't know, that's what we're really trying to learn -- it could really interfere with the Earth's magnetic field and then have an impact on us," Poland said.
The solar flare will pose no threat to life on Earth, he said.
But "it is the kind of thing that might create some spectacular viewing in the heavens," said Lake. The aurora borealis, or Northern Lights, might appear brighter.
This event apparently is a sign of things to come. Scientists say solar activity will increase and peak in the next four to five years.

619. Cowards and fruits

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: nz2t@aol.com
Message-ID: <19970409174000.NAA16408@ladder01.news.aol.com>
Source record: 200757

I am posting this message, because the LITTLE coward who just tried to (once again) stir up trouble, did not have the guts to identify himself when he sent his "compaint" to ARRL HQ. This "complaint" was in regard to statements made by me in a particular reply, which was on the subject of "LAMBDA". These statements were part of a reply, in which I was responding to the VP of LAMBDA ARC, some 3 months ago! Aside from everything else, one whiner in 3 months, ain't bad !

In this message, I refer to our current White House occupant as an "asshole". This seems to have offended some thin skinned dolt, so let me change that term to "anal oriface". Better? Aside from that, quite honestly, there was nothing "unusual" about my comments. I suppose the fact that I identified myself as a "League Official", and then offered my HONEST opinion might have upset the LITTLE dolt, but I have the right to offer my opinions on any subject I choose.

My opinions DO NOT necessarily reflect those of the ARRL, and since I am not a member of the Board, my comments have no more impact than anyone else's. Let me say publicly, that I will state my beliefs where I like, when I like, and to whom I like. And, if the LITTLE coward does not like it, that's just too bad !

I took a morale stand on this issue, and I am sticking to it. I will NOT support LAMBDA or its goals, and I do not recognize its existance within the State of Texas, or within the North Texas Organization. I believe that these views are shared with the VAST majority of our members here. They elected me, and it is their opinions that matter; not one LITTLE coward, who probably could care less about gay rights.

I do agree that gays should have the right to be left alone, but I also see that I have that same right. I do not want ANYONE's sexuality "in my face", regardless of what their preference might be. Other than that, I believe in "live and let live".

I have addressed much of this same response to the League employee who brought this "complaint" to my attention. I have no use for whiners, and less for cowards. There is no credibility in what this person had to say, because he lacked the courage of his convictions to identify himself. This is along the same lines as the little lying dorks who send messages from "nobody@nowhere". To them, I use that old Marine command: "GET A PAIR" !

Bob Adler N5NY
NO TITLE - JUST PLAIN OLE BOB !!

Come to the Sonoma County Radio Amateurs test session on 4/12 in Santa Rosa, CA at 9:00 AM, and you can adjust the tone to whatever you like.

622. FCC Public Notice - Beta Test Site Announced

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: Bart Jahnke <vec@arrl.org>
Message-ID: <334BC8C9.690E@arrl.org>
Source record: 200760

PUBLIC NOTICE

Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

Released: April 8, 1997

WIRELESS TELECOMMUNICATIONS BUREAU ANNOUNCES FREE
BETA TESTING FOR 30 DAY PERIOD

The Wireless Telecommunications Bureau is making available on a beta test basis, for approximately 30 days, free of charge, access to three database applications: 1) Amateur query; 2) frequency search program for the 929 and 931 MHz databases and; 3) database transaction downloads. The beta test period will begin on April 8, 1997 and will extend to May 12, 1997 for this first group.

Access to the programs is available through the beta test site at http://gullfoss.fcc.gov/beta.htm. The site map for the application is from the FCC home page at www.fcc.gov through to the FCC's Wireless Telecommunications Bureau internet site at http://www.fcc.gov/wtb/wirehome.html. Choose Wireless Electronic Commerce on the Wireless Bureau's home page and further choose Beta Page for Future Electronic Commerce Applications. Select your applications from the Beta Testing Page.

The applications are as follows:

Amateur - This application allows realtime query to the Amateur database using a number of parameters including dates, zip codes, licensees, and callsigns. Any comments should be e-mailed to betacomm@fcc.gov.

Frequency search program - 929 MHz and 931 MHz - This application does a radius search for a given latitude and longitude on 929 MHz or 931 MHz stations. Any comments should be e-mailed to betacomm@fcc.gov.

Transaction download - This application allows users to download from a choice of seven days transactions for each Wireless database. The various database tables are extracted into flat files. Documentation may be downloaded. Each day's data will be overwritten every seven days. At the end of the beta test period, a complete offload of the databases will be available in CD-ROM format from ITS, the FCC's public access contractor. These CD-ROM's are produced quarterly. The transactions online will enable the public to keep up to date records of the Commission's activity using the CD-ROM data as a base for initiating one's own data base. Any comments should be e-mailed to

betacomm@fcc.gov.

During the beta test period, there will be no charge for access. At the end of the beta testing period, the applications will be available on the FCC's wide area network at a charge of $2.30 per minute. The first two minutes of access will be free.

Additional applications will be added to the beta testing program as they are available including Form 900 renewal application for all services.

To enroll as an official beta tester and receive E-mail notifications concerning the beta testing, send an E-mail to khoutz@fcc.gov.

Further questions may be directed to the Consumer Assistance Branch, toll free 1-800-322-1117 or to Technical Support (202) 414-1250.

-FCC-

Hello fellow WEFAX FAX SSTV RTTY enthusiasts.

I've just updated by FTV program - current release is 0.98f
Download it from http://www.geocities.com/SiliconValley/2504

For the first time, I have released the software as full-featured
shareware.

FTV brings innovative digital signal processing and analysis techniques to
your multi-media PC. It can be used to receive images from Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from
radio telex services, as well as Amateur Radio FAX, SSTV and RTTY signals.
It can also transmit Amateur Radio FAX and SSTV (Slow Scan Television). No
external hardware, other than a radio, is required, as all the necessary
signal processing is implemented in software.

FTV uses a SoundCard to decode:-
WEFAX weather photos from weather satellites
FAX wirephotos and meteorological maps (Supports FAX transmission)
SSTV pictures in monochrome and colour (Supports SSTV and SSTV COLOUR
transmission)
Baudot text (RTTY)

Here is a run down of soem of its hot features:

(1) It keeps the demodulated signal in memory, so that the signal can be
analysed again at a different keying rate or polarity! Garbage can be
resampled on the fly, which means that minutes of received signals decoded
at the wrong baud rate or keying polarity are recovered, on the fly, while
still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud
rates are automatically set following analysis (assuming you have
calibrated your system as described in the documentation file
'readme.txt').

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

Take a look at my web site for futher details, at:
http://www.geocities.com/SiliconValley/2504

What can I say ? Try it, it's free, and may you have as much fun as I am
having...
And, keep me posted... If you have suggestions, you have got to let me

know!

73's from Brian.

> --
> Jack
> Modeling the NYC and NYNH&H in HO; D&H and CP Rail in N
> ARRL - N2MPU
> NRA & NRA-ILA

Also, in follow up to the original poster, apparently 15 does get
jumpered. I mentioned once about not thinking 15 should be shorted, and
then I opened mine up after reviewing everything and noted I have the
zero ohm resistor still across 15. That's what I get for trying to go
by memory :-(So, if you removed 13, try the above resets and it should
all work out.

I've worked 6 for about 2 years now. Nice band when its up. Otherwise
its good for local chat (like 2). I'm using a Kenwood TS60S and a
couple differant antennas. I have a Create logperiodic (vertical) & an
MFJ dual band 2meter/6meter horizontal. also a diamond V2000A vertical.
Rig has been cranked up slightly to 125 watts PEP.

OOPS :> Nope it wasn't intentional, but if he is a good teacher
then he knows it and knows I don't include him. Actually I realize
that most teachers are devoted people, its just there are getting to
be TOO many people like Burt in all walks of life. They become
disillusioned for whatever reason and use all their energy trying to
destroy what they could improve. I would like to have a serious open
discussion with Burt on why his attitude is what it is, but when I,
and others, have asked he has refused to give specific reasons. So
much more is the pity. I really believe he is an intelligent person
who could help the SERVICE. (And YES, Burt if you are reading this,
it is a service whether you like it or not, I can provide you with
MANY people who's lives have been helped)

>onto HF.

That's true, but the requirments can be changed and that is
what we are working to do.

>My point is for those that have not passed their code YET, to stop
>whining pass the code and then put it in the closet. Then they will
>have all of the HF bandwidth they want.

In other words, just do it, don't stick to your convictions and
hopefully you'll be converted to pro-code (IMHO).

>Just that easy. I think the engry that most folks waste fussing about
>the things they don't want to do is a shame.

I've expended much energy for ham radio that benefited
far more than myself. That's how I view my role in the
code issue.

>I don't use my code. I passed my code to get HF. I will most likely
>never use it again. But, I don't use PACTOR either and I had to answer
>questions about it in order to pass my exam.

But you could have gotten EVERY pactor question wrong and
still passed. That's not the same with CW. Many, including myself
have suggested merging the scoring which, if done, would put
CW on the same bsis as the Pactor. Would you support that?

>I don't plan to contine explaining myself to you anymore. Congrats on
>the Advanced ticket. You passed your code apparently because you wanted
>something....my guess is HF access.......let's see could the others do
>that as well?

Most of us have.

>Good Luck to you in your efforts to open the HF airwaves to those too
>lazy to put forth enough effort to pass the code.

That you simply apply the LAZY label to those you don't
know is just the continuing effort to personalize the issue
rather than discuss the merits of it.

Fun band. When open it is jumping. Otherwise it can
be pretty desolate. Listen in on 50.125 which is the
SSB calling frequency.

Equipment in my case is a Kenwood TS-690 with a 5 element
beam. The Kenwood has 50w on 6m but it has gotten
me CA and Nevada during band openings on contest
weekends.

646. Ham License exams in Northern NJ

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-09 00:00:00 UTC
From: ker@mtvoyager.mt.lucent.com
Message-ID: <5if636$41c@nntpb.cb.lucent.com>
Source record: 200877

The Morris & Essex Amateur Radio Club (MEARC) and the West Essex Amateur Radio Club (WEARC) will jointly conduct Amateur Radio examinations on the third Tuesday of every month, 7:00 PM, at the Essex Fells Service Building, 2nd floor, 307 Runnymede Rd, Essex Fells, NJ. Exams for all license classes will be administered by volunteer examiners certified by the American Radio Relay League (ARRL). Pre-registration is requested but not required.

For more information and registration, contact
Ken Roser (W2KR@pobox.com) at 201-377-4776 or Ken Spingarn (khs@openix.com) at 201-377-1997

Tune into the MEARC Verona repeater, 448.875 (-5 MHz in), PL 151.4 Hz, for talk-in and announcements on the test sessions.

Next session: 4/15/97.

INSTRUCTIONS:
1. If you already hold an Amateur Radio license you must bring your CURRENT ORIGINAL license and a PHOTOCOPY (FCC requirement). The original license will be returned to you immediately since only the photocopy of your license is attached to your application form; without your original FCC license, the VE team can not provide you with temporary upgrade credit at the session even if you successfully complete the necessary element(s)
2. At least one pencil (#2 lead) and a suitable eraser
3. An ink pen
4. A PHOTO ID or any two forms of positive identification (FCC requirement) from this list (your cooperation in providing proper identification is appreciated):
- non-photo driver's license or other ID card (school or employer)
- birth certificate (with appropriate seal)
- passport
- minor's work permit
- any business or personal correspondence addressed to you
5. To receive credit for either a code or written element you have previously passed, you must bring the ORIGINAL and a PHOTOCOPY of your Certificate of Successful Completion of Examination (CSCE). The CSCE must have been issued within the past 365 days and can be from any VEC. Photocopies alone are not acceptable
6. Some electronic calculators (including programmable are allowed). Be prepared to demonstrate to the administering VE Team that all calculator memories have been cleared and that it has no built-in formulas (p is okay). They may otherwise have to deny you the use of your calculator.

7. Scratch paper and code copy sheets are provided. All notes made during the test must remain with the test papers. Certificates for code, written and upgrade credit will be issued at the session.
8. For 1997, the test fee for all elements except for element 1A (5 WPM code) and element 2 (Novice written) is $6.25. There is no test fee for elements 1A and 2. Please bring either a check or money order made out to ARRL VEC or exact change as the VE team may not be able to make change.
9. PHYSICALLY HANDICAPPED PERSONS, including those with severe hearing loss, should read the instructions attached to FCC Form 610 regarding the "Physician's Certification of Disability" section of the application. Also, if special testing procedures are required (see FCC Section 97.26{g}), please notify the VE Team Contact Person immediately to help the VE Team maybe any special preparations for you. Contact the VE Team for details.

DIRECTIONS:
Test sessions are held at the Essex Fells Service building, 2nd floor, 307 Runnymede Rd, Essex Fells, NJ

>From Route 280:
Take Route 280 (east or west) to exit 5B, then northbound on Livingston Avenue to the end. Turn right onto Eagle Rock Avenue. At the next light turn left onto Roseland Avenue. Proceed .8 miles on Roseland Avenue and turn left onto Borough Place (police station and church on corner). Go to stop sign and turn left onto Runnymede. Take Runnymede under the railroad bridge and service building is on the left just as Runnymede makes a sharp turn to the right. The service building is a brightly lit Tudor style building.

>From Eisenhower Parkway:
Take Eisenhower Parkway to Eagle Rock Avenue (Exxon and Mobil stations on corner). Proceed 1.8 miles and turn left onto Roseland Avenue. Proceed .8 miles on Roseland Avenue and turn left onto Borough Place (police station and church on corner). Go to stop sign and turn left onto Runnymede. Take Runnymede under the railroad bridge and service building is on the left just as Runnymede makes a sharp turn to the right. The service building is a brightly lit Tudor style building.

>From Bloomfield Avenue:
Take Bloomfield Avenue to Roseland Avenue. Proceed .8 miles on Roseland Avenue and turn right onto Borough Place (police station and church on corner). Go to stop sign and turn left onto Runnymede. Take Runnymede under the railroad bridge and service building is on the left just as Runnymede makes a sharp turn to the right. The service building is a Tudor style building.

No, it was created automatically ... technology is wonderful, 'aint it?

It's a cryptographically-secure message digest that proves that
*I* really wrote the message and allows the detection of any
alteration to the message ...

If you watch a few, you'll see that they're never the same ...
because they are dependent on both every bit of the message
content and on a time-varying cryptographic function ...

Pretty neat, huh? (Discourages the twits from altering my posts
with their "cute" little "quotes," etc. to make it look like I
said things I didn't say ...)

No offense, but that *isn't* a TLD. A domain, yes. TLD, no.

The TLD for ampr.org is 'org'
The TLD for frontiernet.net is 'net'
And so on... you get the idea.

What the quoted poster above was suggesting a new TLD of 'ham'.

The chances of that happening anytime soon is likely going to be very slim
given the political climate.

I now return y'all to the 2 minute hate on alternating Tuesdays. ;-)

Hyperlog has a new web page at:

http://www.akorn.net/~w4wt/

You can go there to download a fully functional trial
copy of the software, or if a registered user, a copy
of the latest release (now at 3.06D).

Major Features of HyperLog:

-Interface to major callbooks (SAM, Flying Horse, Buckmaster, and QRZ)

-Interfaces with all major radios (Yaesu, Icom, Kenwood, & Ten-Tec)

-Tracks awards

-Full function Packet interface for HF and VHF

-Automatically pulls DX Spots from Packet and displays them in popup
window

-Will QSY your radio to Packet Spot

-Handles up to 2 billion records!

-Fully indexed database for fastest access

-All major reports available for printing or viewing

Disclaimer: I have no business or financial interest in this program,
except as a satisfied user for many years.

I'm working on two transverters for this band but may not get it
finished this year. I plan to use a 22896 MHz LO and harmonically
mix it with 1296 MHz to get 47088 MHz.

You can buy units from DB6NT made in Germany.
Kuhne electronic Telefax 09288/1768

The price list I have lists the converter at 874 DM, but I
think you also need the 483 DM local oscillator.

Sorry ... what I really meant is that we have an entire block of
IP addresses, which would appear to be sufficient for the
foreseeable future ... and an address heirarchy and a means
of assigning them ...

>
> The TLD for ampr.org is 'org'
> The TLD for frontiernet.net is 'net'

Yea, OK ... technically you're right and I missused the
terminology in the strictest sense, but in a practical sense
"ampr.org" is "top level" enough for me ...

What say we agree not to sling lead over it? OK? <grin>

On Sunday, 4-27-97, The Ham Radio & More Show will feature a
lively, moderated debate about the CW requirement.
The special participants will be Nancy Kott, WZ8C, and Fred Maia,
W5YI.
Each will have a 4 minute opening remark, followed by 2 minutes
rebuttal. Then, a question or 2 to each by the host, followed by
interaction between the two, followed in the time remaining by
listener phone calls.
This will be a preview for the "Open Forum" at the upcoming Dayton
HamVention.
Whatever your view is on the CW debate, listen to the show and
possibly get a new perspective. Also......let the ARRL know your
position one way or the other, as they are currently discussing this
very issue.
Info on the Ham Radio & More Show is below.
Len Winkler, KB7LPW lenwink@goodnet.com

659. DX-200 Service Manual

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-10 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <334D24D5.2772@ford.com>
Source record: 200641
Cross-posted to: rec.radio.shortwave,rec.radio.swap,rec.radio.amateur.misc

I just recently found out that RS is no longer offering
these (if they ever were). Does anyone out there have
a service manual w/schematic and alignment instructions
for the DX-200 receiver...?

I will reimburse for materials and the trouble to do this,
and/or can trade copies of service manuals for other RS
desktop receivers (DX-160, DX-302, DX-440).

If anyone could help out I would tremendously appreciate
it... I could probably fly-by-wire on most of the align-
ment, but there are quite a few adjustments in here that
I am not quite certain of, plus there is a 500KHz cali-
brator and I'd rather not dink with that without the
proper instructions...

(I tried to reach W7FG manuals, but the links from Yahoo
are not working. I'm not sure how to reach Raymond
Sarrio at the moment...)

C.K.

You're missing a lot.

There is no need to assign any number of addresses to a domain.

mondoray wrote:
>
> What's the tone frequency which is used to give the CW test for the
> license exams?The tone used by the ARRL / VEC for regular exams is 716 Hz. For the 5 and 13 words per minute exams, the Farnsworth method is used. The characters are sent at 18 words per minute and additional spacing is inserted to reduce the code speed to the indicated timing. The use of the Farnsworth method allows the candidate to copy the letters as complete sounds rather than trying to "figure out" each letter as it is sent.

Other VECs may use a slightly different scheme.

I think you should connect the ground end of c2
to the Emitter-connected side of C1.

This might work. Currently you are operating as a small
signal amplifier. I think you have the drawing wrong.

Doesn't look like a feedback oscillator to me.

I was under the impression that that was exactly the case,
for example class a, b, and c IP address blocks ... where
class c addresses convey 256 "local host" addresses to
a subnet ...

If DNS and other aspects take care of finer resolution and
translation, I stand corrected ... I will be the first to admit that
I need to spend some more time studying the intricacies of
the protocol suite ...

No matter who issues them, domain names have to map to IP addresses
somehow and until IP addressess are extended beyond nnn.nnn.nnn.nnn
format (not sure when this will take place) all the smoke and mirrors in
the
world are not going to make something from nothing as far as the underlying
addressing is concerned ... right?

What the heck's wrong with (as an example) carl@pc_n.wa6vse.ampr.org ???
(note the host name implying more than one machine in the wa6vse
domain ... which "lives" in ampr.org ...)

Am I missing something, or would not a domain like "k6xyz.ham" require
the assignment of a minimum of a 256 IP address block to that domain?
It seems that that would be very wasteful of IP addresses and make
things harder for nameservers and routers ...

Well, since you like to bitch so much about people not knowing what
class YOU are, why don't you search it out and find the answer.

Should I insult you the same way for not knowing my class of license?

PERFORM AT YOUR OWN RISK AND MAKE SURE YOU CAN BACKOUT IF NEEDED

The Kenwood TM-732A can have extended receive and 800 mhz receive.
Remove the top and bottom and front cover. Clip jumper W1. Remove
resistor R20 and R21. Jumper out R19 and R22. Add a 22pf cap in the
C348 (near IC202)on the 440 tx and rec board. Reset the processor by
pressing and holding MR and the VFO and turn on the radio. Then to
enable and disable the 800 mhz part, press the 440 VFO for longer than 1
second.

Good luck!
I have been told that clipping W1 will sometimes cause some problems in
the newer models.

We have a WINNER in the Log-It v5.0 Logging Software Contest !

Its : Drayton - KF4AME from Miami, Fl. Why not enter your name

for the MAY giveaway !?

My website has a free download of Amateur logging

software - and alot of other computer related programs too ! The

database is in full color, has logging, QSL functions, access

QRZ! cd-rom, search DX prefixes, ten minute timer, colorful

world maps with call prefixes for reference, awards tracking,

screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

There is also a bulletin board for Amateur Radio related stuff.

You can use it for messsages, sell/trade/buy, computer problems,

track DX and all kinds of things !

The site has a chat service for maintaining contact when the bands are

down and other times too !

Take a look ! Thanks .... Jim

We have a WINNER in the Log-It v5.0 Logging Software Contest !

Its : Drayton - KF4AME Miami, Fla.

You can enter the MAY giveaway ... why not submit your entry ?

Looking for a logging software package that is inexpensive and

does most of what the very costly packages do ? I have one !

Visit : http://www.esdi.com/log-it

I think this just might be what you were looking for - an old

fashioned deal ... good product and low cost ! There's a free

download there also !

The site also has a bulletin board service where you can post

messages, buy/trade/sell equipment, get help with computer

problems, announce DX operations and simply keep up with friends

and other things.

The site even has a chat service ... CHAT SHACK ! You can

maintain contact when the bands are down or anytime.

Take a look ! Thanks .... Jim

What kind of degree? B.A.? Master? PhD? I don't recall seeing previous posts as to what, so I'm going to assume that since he's been working on it for ten years that it's something a little higher than a bachelor degree. Either that or he has family and work obligations that maybe only allow him to take a couple of credit/hour courses per semester. I know of on person who took twelve years to get a 4 year degree for these reasons.

Yet another example of elitist hypocrisy. Something you seem to despise so much in others shows through in your posts.

No. All you need is to have someone do name service (that is if you
want people to be able to reach your domain...) I've got a sld that
currently only has one IP address associated with it, and that's
because I'm too lazy to properly set up a nameserver for it.

I see that a method has been developed for the transmission of ASCII text, including lowercase characters, with 5-level code, for use within AMTOR (which actually uses the 3 out of 7 CCIR-476 code.)

Just as I thought it odd that CCIR-476 code was developed, when the older Moore ARQ code had already become International Telegraph Alphabet #3, I find it odd that this code seems to differ in some ways from current 5-level-code practice.

(But not too odd: current 5-level-code practice seems to be rather obscure; I've had a hard time finding information on it, and have only recently run into a few tidbits. Thus, it's unfair to criticize someone who came up with what _is_ a very useful idea because it doesn't follow the pattern of standards nobody seems to have heard of: those responsible for 5-level standards are hiding their light under a bushel at the present time.)

The ASCII-over-AMTOR keyboard would look like (of course, special keyboards are probably not used in practice) this:

```
! $ ^ & ~
1 2 3 4 5 6 7 8 9 0
Q W E R T Y U I O P

_ " ` } { [ ]
- ' WRU % @ # * ( )
A S D F G H J K L

\ ; | < >
+ / : = ? , .
Z X C V B N M
```

The bottom two rows are mostly like a normal Baudot (Murray) keyboard; single quote is in the international position, and for the same reason, = and not ; is the FIGS shift of V. The only unusual thing about that arrangement is that BELL is replaced by *, and that was done intentionally, to avoid accidental noise.

The top row and the lowercase alphabet are the FIGS and LTRS shifts respectively of the extended character set, and Character No. 32, the all-space (or all-zero) character toggles in or out of that set.

What do I find peculiar about this setup?

1) } and { over G and H, respectively, may be a misprint for { and }.

2) It isn't usual for 5-level based codes to use a character to toggle both in and out of a special character set. Instead, the usual

practice is that Character 32 (hereinafter called NUL, even though it now _does something_) goes to an additional character set (i.e. Russian letters not found in the Latin alphabet) and both FIGS and LTRS exit that set.

With two extended character sets, one for FIGS and one for LTRS, one can use NUL to go to the extended character set associated with the current mode. (But see below.)

3) Normally, if lower-case is used, it is the usual form of letters; so shouldn't upper-case be grouped with the less frequent special characters? (This wouldn't really cause a compatibility problem for text communications, one would think, since an uppercase-only system would take all letters to upper-case in any event.)

4) There already is an existing standard (it's both new and obscure) for extending 5-level code to include lowercase. It involves using the LTRS code, when already in LTRS shift, to switch between upper-case and lower-case. A LTRS following a FIGS with no intervening characters is used as a kind of reset: it causes a normal LTRS (after printing FIGS characters) to go to uppercase letters, and it causes uppercase letters to be printed regardless of whether letters were uppercase or lowercase before.

Even in old-style mode, a LTRS toggles from uppercase letters to lowercase letters and back again - it is a toggle, but the upper/lowercase distinction is considered less significant - but the first one clears old-style mode. Now, when a LTRS code is recieved after printing figures characters, lowercase letters will be printed.

Because of these factors, it looks as if, when an official standard is adopted for sending ASCII characters by means of 5-level TTY, it will differ in a number of points from the ASCII-over-AMTOR method. (Of course, my comments may be regarded as highly irrelevant, in that current commercial 5-level equipment is too specialized, or 5-level code too little used, by industry if not by hams, for standardization to be a concern, as long as FCC rules are followed.)

Announcing a MAJOR Richard Estes ANTIQUE RADIO AUCTION for Saturday
April 12 10AM At the SEVILLE ANTIQUE AUCTION BARN in Medina, OHIO
Featuring over a hundred antique radios INCLUDING:
Radiola AFM Clap Easton Type HR Receiver, AK Breadboard AK-10, National
Velvet Power Supply, RADA Westinghouse Unit, MANY Horn Speakers, Radiola
24, Deforsts D-12, National SW3 Receiver, National AB Power Supply A,
MANY Battery Sets, Console Radios, Table Type and Tombstone Radios, and
many more

DIRECTIONS:
From Akron: follow I76 to Exit #2 for the Seville Medina Exit, go North
on State Route 3 1 mi. to the Auction Barn
From the Southern part of OH: follow I71 to I76, take I76 East to Exit
#2, go 1 mi. North on State Route 3 to the Auction Barn
From the Northern part of OH: follow I71 to the I76 Exchange, take I76
East 1 mi. to Exit #2 and go 1 mi. North on State Route 3 to the Auction
Barn
From Median: go 6 mi. South on State Route 3 to the Auction Barn

6m is 50 MHz so 6 mm must be 50,000 MHz or 50 GHz.

that must be some oscillator in Bill's TS-690...

problem is that if the FCC doesn't provide DOB, then QRZ
won't be getting it either.

i think it's poor policy to change such things w/o permitting
review -- what if next some crybaby complains about having
their name and address in there? there'd be no way to
check a given call against a given operator name and probable
location...

for those that worried about DOB being published on amateur
licenses, they should have been offered an opportunity to
turn 'em in...

Ed,

The K2TL homepage: http://members.aol.com/jkktl/ham.htm has the
program WxSat which uses your soundcard to decode the Polar Orbiters
and Meteosats then displays the WAV file as a BMP. An excellent
compilation of SSTV programs is found at http://www.qsl.net/n9ngf/
Some of the programs are DOS and some are Win95. There are
descriptions and shareware to be downloaded directly from the site.
I'd have to do a search to find some other sources and my
ISP server is running s..l..ooo..ww.. tonight. Just search using
Webcrawler or Yahoo to find SSTV software, RTTY software, and
Wxsat links.

Lowered Price! Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner. Extremely light use. Approximately 30 total contacts is total usage. In perfect shape, like brand new with all the original boxes and packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four microprocessors provide the easiest possible control interface. Two independent VFOs for each band (20 total) hold their own frequencies and modes as well as clarifier offsets and repeater shifts. 32 memories store data for the VFOs giving a total of 84 independent sets of frequency, mode and other selections. Noise blanker, all mode squelch, 4 function multimeter, and AF speech compressor with adjustable IF passband shift. Iambic memory keyer for CW with dot-dash memory.

Top panel heatsink allows this radio to run cool at all times and with an internally switched fan, it allows full transmitter output without any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $825.00, buyer to pay shipping.

Greetings Myron- Couldn't see that anyone had responded to your
question about how a crystal radio works- If you're actualy
interested, I'll describe it. A long antenna or aerial is attached
to a resonant coil the other end of it is connected to an earth
ground. The coil is often tunable by varying a capacitance shunting
the coil. Some times the coil was constructed to provide a variable
inductance. There is a tapped point on the coil that is capacitively
coupled (at R/F freq) to a "crystal". The crystal is in turn
connected to a high impedance headset which is inturn connected to
ground. In some cases a small capacitor was placed in parallel to
the head set. Thats about as simple as it can get. It works as
follows: The inductor is "tuned" to the frequency of the AM desired
signal. The crystal is a simple point contact diode that peak detects
or rectifies the amplitude of the modulated RF carrier. That is a
signal adequate for the headset to provide a small audio signal you
can hear. If there are several AM stations near you, the resulting
audio might be a combination of all of them with amplitudes indicitive
of the RF field each produces at your location.

It is not uncommon for existing electronic hardware (such as a telephone hand set) to have an effective "crystal set" action and you'll hear a local radio station when you listen to a dead line. In that case, there was a non linearity in some device in the telephone that performed the peak detection function the crystal satisfied. The crystals in early crystal sets were often lead pyrite secured in a mount with a point contact made by a safety pin looking contacter. There were several easily obtained natural semi-conductors that would respond in a non-linear way to RF signals. I recall making one using a piece of pencil "lead" (graphitte) laying across two razor blades. In later years you could purchase germanium diodes.
The commercial versions often had an inductor that was about six inches long and the connection was made by a sliding contact that gave some degree of frequency tuning.
I suspect this is a LOT more about crystal sets than you had wanted.
Good luck.

CURRENT SOLAR FLARE RELATED DISTURBANCE STATUS

As of 05:30 UTC on 10 April, the well publicized solar flare related disturbance of 07 April has not yet arrived. See below to place this disturbance into perspective.

NEW SOLAR CYCLE 23 STATUS

It is now becoming quite clear that we have passed old solar cycle 22 and are ramping slowly upward toward the maximum of the present solar cycle 23. We have seen some reports and heard speculation regarding this matter that is somewhat inaccurate. Although the official word still isn't out yet, there is an increasingly abundant amount of evidence suggesting that we are now within solar cycle 23. Some of this evidence follows: Calcium plage emissions are slowly increasing and have been increasing for many months now; the background and daily average x-ray flux values are increasing - they are higher now than they have been since about 1995 when we were still in the decline of cycle 22; the occurrence of new-cycle sunspot regions is increasing and the frequency of old-cycle sunspot formation is decreasing. This latter item is usually considered the clincher.

Unless sunspot formation suddenly dies out for an extended period of time, the sunspot minimum of solar cycle 22 will almost certainly be May of 1996, where the smoothed sunspot number fell to 8.1.

PROSPECTS FOR THE FUTURE OF SOLAR CYCLE 23

Solar Cycle 23 is predicted to be a larger than average solar cycle. Current predictions estimate the sunspot number for cycle 23 will probably peak near 160 (+/- 30) with a peak in the 10.7 cm solar radio flux near 205 (+/- 30). There is some excitment that this cycle may be a record breaker. The current champion of sunspot cycles is solar cycle 19 which had a smoothed sunspot number of 201 in November of 1957. This is not likely to occur, but

it is a notable possibility. The art of predicting the magnitude of sunspot cycles is still rooted primarily in empirical relationships. We do not yet understand the physical processes involved well enough to derive successful quantitative models of sunspot cycles. For this reason, there is a level of uncertainty that (however small) could result in a record-breaking cycle.

If current projections are correct, the sunspot maximum is currently estimated to peak in March of the year 2000. It must be noted, however, that predicting the month of maximum is even less certain than the sunspot number. The actual month of sunspot maximum could be as early as January 1999 or as late as June, 2001.

Geomagnetic activity is expected to gradually become increasingly disturbed as we move toward the solar maximum of cycle 23. The number of days of disturbed conditions is expected to increase from 1997 through to a peak near the year 2002. Thereafter, activity should begin a gradual decline. This is good news for people interested in watching auroral activity, but it is bad news for people reliant on ionospheric radio communications and satellite health. For people reliant on ionospheric radio communications, there is a bitter-sweet story. Although the frequency of degrading interplanetary disturbances will increase, the large increase in ionizing radiation from sunspot regions will provide ever-improving propagation conditions with bands gradually opening into the higher frequencies of the HF bands. The years from 1999 through 2005 will be the worst in terms of geomagnetic and ionospheric disturbances. And of those, the year 2001 is expected to be significantly disturbed, seconded by the year 1999 and the year 2004.

PLACING THE 07 APRIL SOLAR FLARE DISTURBANCE IN PERSPECTIVE

A few notes and caveats regarding the solar flare and related coronal mass ejection of 07 April is in order, considering how well publicized this event is becoming. We have seen a sufficient number of reports on TV, the Internet and radio to feel justified in placing this disturbance in perspective. Some sources are blowing this event a fair bit out of proportion.

First, the flare itself was rated a class C6/3N event. The C6 portion identifies the magnitude of the flare in soft x-rays. The flare in x-rays was really not that unusual or spectacular. It was very small compared to the solar flares that we will be observing over the next 3 to 6 years. The last portion of the rating ("3N") defines the optical size and brilliance of the flare. In this case, the flare was quite large, but of only average ("N"ormal) brilliance. A size 4 flare is the largest optical flare rated.

So the flare itself was not very spectacular in x-rays, but it was fairly large optically. Since x-rays are considered the more accurate indicator of a flares true magnitude (and potential influence on the Earth), we can conclude that this flare was really rather diminuitive.

Over the next 3 to 6 years, we can expect to see some solar flares 100 to 1,000 times more powerful than this one. This should help bring the ordinary nature of this flare into perspective.

What few people realize is that solar flares themselves are NOT well correlated with the magnitude of interplanetary disturbances (technically called coronal mass ejections or CMEs). Most solar flares don't even produce disturbances that escape the Sun. In fact, a great number of CMEs are not associated with flares at all. And some aren't even associated with any discernable changes in the appearance of the Sun. Some researchers even argue that solar flares are not related to coronal mass ejections at all, but that they are two separate and distinct types of unrelated phenomena. The jury is still out on that one. Caution must therefore be exercised in relating solar flares with coronal mass ejections.

This particular event _does_ appear to have been related to the C6/3N solar flare of 07 April. The coronal mass ejection itself was larger than most the Solar and Heliospheric Spacecraft (SOHO) has seen, but remember that SOHO has not been in space long enough to see anything but the sparse and less active disturbances associated with solar sunspot minimum conditions. SOHO will undoubtably see some disturbances over the next several years that will blow the lid off the disturbance currently being publicized. This disturbance is probably being publicized so strongly because of our new and very much improved ability to observe these solar events with new state-of-the-art spacecraft and high resolution.

So, placed into perspective, what has really occurred is an event that is not out of the ordinary or liable to produce any serious impacts on Earth. The most probably impact that will be observed is a rather weak shockwave hitting the Earth (marking the disturbances arrival) and producing a sudden (and small) impulse in the Earth's magnetic field, followed a few hours later by somewhat stronger fluctuations in the Earth's magnetic field (perhaps a few of which may be large enough to be classified as "minor" or "major" fluctuations). But these too are not out of the ordinary. We routinely see (sometimes several times a month) brief periods of minor and major geomagnetic activity - particularly over the higher latitude regions where such activity is strongest. The geomagnetic activity should coincide with increased levels of auroral activity - but again nothing particularly magnificent is expected. We do not expect auroral activity to become visible from any of the lower latitudes below about 40 to 45 degrees north latitude (over North America). Some locations in New Zealand and (perhaps) extreme southern regions of Australia may observe activity, but this too is not unusual. New Zealand regularly reports sightings of auroral activity - even during the solar minimum. We have received sighting reports from New Zealand observers at least once or twice a month even during the lull of the solar cycle.

Wait until the true power-houses of solar activity start appearing on the Sun. THEN you'll see how insignificant this disturbance will likely be. As we rise toward the solar maximum, we will begin to see some periods of geomagnetic and auroral activity that will dwarf this disturbance in comparison. Sightings of auroral activity are usually possible from the

southern regions of North America (and sometimes even into the tropics) at least once or twice each solar cycle. Powerful displays visible throughout most of the continental United States, Europe, Russia, Australia and New Zealand will become much more common over the next 3 to 6 years, occurring possibly dozens of times during this new solar cycle.

Over the next several years, there will undoubtably be an increasing number of satellites that suffer anomalies and even failures. The increased sensitivity of satellite components translates (in many cases) to increased vulnerability as well. This should indeed be a very interesting decade of activity and one for which satellite owners are likely going to have to sweat through.

AVAILABLE TOOLS AND SOURCES OF INFORMATION

The advent of the world wide web and easy access to the Internet has opened up a wide assortment of possibilities for amateurs and professionals alike. You can now obtain current (almost realtime) images of the Sun and the solar corona. A good source of information is at the WWW page for the Solar Data Analysis Center (SDAC) at: http://umbra.gsfc.nasa.gov

Current predictions and other information can be obtained from the Space Environment Center at: http://www.sec.noaa.gov

Information regarding current solar flux and geomagnetic data can also be found at: http://solar.uleth.ca/solar

For those nearer to Australia, a great deal of information is available from IPS Radio and Space Services in Australia at: http://www.ips.oz.au.

These are good starting points for finding information on the current state of the Sun.

For those with a real hunger for REALTIME information, a substantial software package is available for those with Windows 95 computer systems (and soon Windows 3.1 systems) that will haul down a huge amount of critical solar and geophysical information IN REALTIME over the Internet. All you need is a computer that can be connected to the Internet (whether via a modem and an Internet Service Provider, or a direct line). The software effectively turns your computer into a solar, geomagnetic, space and ionospheric "weather" analysis center. The same data is used by professional solar and space weather forecasters. You can observe the progress of solar flares, AS THEY HAPPEN, updated on-screen as frequently as you desire (up to once each minute). You can study the CURRENT state of the ionosphere, obtain current geomagnetic readings from up to 11 magnetic observatories world-wide, set up to 43 audible warnings providing you with exceptional "activity trapping" capabilities, track the current locations, sizes and shapes of active solar regions and coronal holes, and much more. We feel it is ideal for anyone who wants to stay on top of current conditions. Details can be found at: http://solar.uleth.ca/solar/www/swarm.html

>the person it means their cause is without foundation.

Well, I can relate to that post, but is there not a much better way to
handle things. I TOTALLY agree with you regarding what you term as
the "typical ham". They aggravate me just as much. Luckily, at least
around here, they are very much in the minority. The local repeaters
and simplex frequencies around here are homes of some of the most
interesting discussions I have ever heard. You travel through my area

and I.D. yourself on our clubs repeater and it is not a recognized call sign (especially out of 8 land) you better be prepared to talk about yourself i.e. your interests, your job, your life, etc. Granted they are not all like that, but there are many that still are.

As for becoming an obsession, I agree. Obsessions can destroy lives. You would be preaching to the choir on that point :>, I see them every day, I am a Mental Health Nurse. As they like to say, "Moderation in ALL things" :> I have seen some people who spend way too much time on the radio, but I have probably seen more internet addicts. I

I guess the reason I get so wound up Burt, is that I feel that while Hams are really a good bunch overall, there are NOT enough elmers to go around. Where do newer types like myself (ham for a little over 2 years) go for help? There is only SO much that you can learn from books. Those who have experienced that bad side of ANYTHING are usually the best at guiding others and helping to prevent them from making the same mistakes. Think Burt, what would happen if you handled everything the way you do your attitude re. ham. I believe I have heard you (or others, don't remember which) say you had a previous marriage. If so, then obviously something went wrong. Did you decide to forever denounce marriage and women? Obviously not. You most likely learned from it, and would have valuable advice for somebody else on possible ways to avoid it themselves. Oh well, you get my point :> I have probably rambled on long enough at this point. Catch ya next time :>

708. GMDSS Training & Dkart Navigator

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-10 00:00:00 UTC
From: an@hamilton.unitree.lv
Message-ID: <334cd4f1.19015273@racoon.riga.lv>
Source record: 200715
Cross-posted to:
sci.military.naval,misc.transport.marine,rec.boats,rec.radio.amateur.misc,rec.radio.amateur.policy,sci.geo.satellite-nav

Dear readers,

This is the computer version of the GMDSS-training. It has the
CERIFICATE OF TYPE APPROVAL OF SIMULATE CENTER OF GMDSS.

It consists of the following:

* SAILOR & SKANTI MF TX/RX
* SAILOR & SKANTI MF/HF TX/RX DSC
* SAILOR & THRANE/THRANE TELEX
* SAILOR & THRANE/THRANE INMARSAT C
* SAILOR & DEBEG VHF DSC
* SAILOR & SKANTI VHF DSC
* SAILOR & SKANTI VHF
* DEMONSTRATION EPIRB and SART
* NAVTEX
* SIMULATION OF SAR OPERATIONS and COMMUNICATION EXERCISES

We also have demo version (size of it is about 2.5MB) and we may send
it to you if you are in interest.
http://www.unitree.lv/~hamilton/

==========
++dKART NAVIGATOR systems

At present, there are three dKART system versions, all
developed by MORINTECH Ltd for professional navigators. All
versions are accepting DX90 (S-57) and CM93 (C-MAP)
vectorized charts, and use NMEA information from (D)GPS,
speed log, gyro or fluxgate compass, and auto pilot for easy and
accurate navigation. Hardware for RS232/NMEA
interconnection is available (converters, splitters, combiners,
filters etc.). The software runs on PC computers, for DX90 chart
import purposes a CD drive is required. Pending completion of
the final ECDIS performance standards, the systems will include
software modules for the automatic and semi-automatic updating
of chart information. A trial updating system is presently tested in
the dKART software.
The dKART DX90 NAVIGATOR is a DX90-based
navigation system for small and medium sized professional vessels
such as coasters, service boats, rescue boats, fishing vessels, and
work-boats in general. It is also suitable for larger yachts
demanding professional performance. Works with stationary and
laptop PC computers having screen resolutions down to 800x600.

For laptops, a TFT screen should be selected.

++dKART ENCS NAVIGATOR

The dKART ENCS NAVIGATOR is a DX90-based ENCS
navigation system for large ships. Includes tide/current and ship
turn
predicting modules. Allows a trained operator to edit chart
information, to add own objects and data. Handles ARPA targets. Works
with PC computers having screen resolutions down to 1024x768.
Complies
in general with the dKART ECDIS performance standard, based on the
contemporary draft IMO ECDIS Performance Standard.

++dKART ECDIS

The dKART ECDIS is a DX90-based ECDIS navigation system for large
ships. Full ECDIS performance, the specification will meet IMO SOLAS
regulations. Handles ARPA targets. Works with PC computers having
screen resolutions down to 1280x768, minimum screen size 21". This
system will be released only after IMO completion of final EDCIS
regulations. In the meantime, we recommend the installation of dKART
ENCS NAVIGATOR (see above), for which we offer updates along with
the
development of the draft IMO ECDIS Performance Standard, up to the
final Standard. Pending the ratification of SOLAS ECDIS regulations,
the dKART ECDIS system will entirely replace the dKART ENCS
NAVIGATOR.

That is NOT a reason that supports the continuation of the
requirement. Furthermore, it absolutly fails to address the
statement you made...."there are cases every year that
prove that no skill is ever out of date."

710. Need help with SIMPLE QRP rig

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-10 00:00:00 UTC
From: Mark McCuistion <mccuistion@lucent.com>
Message-ID: <334CFA20.2E74@lucent.com>
Source record: 200717

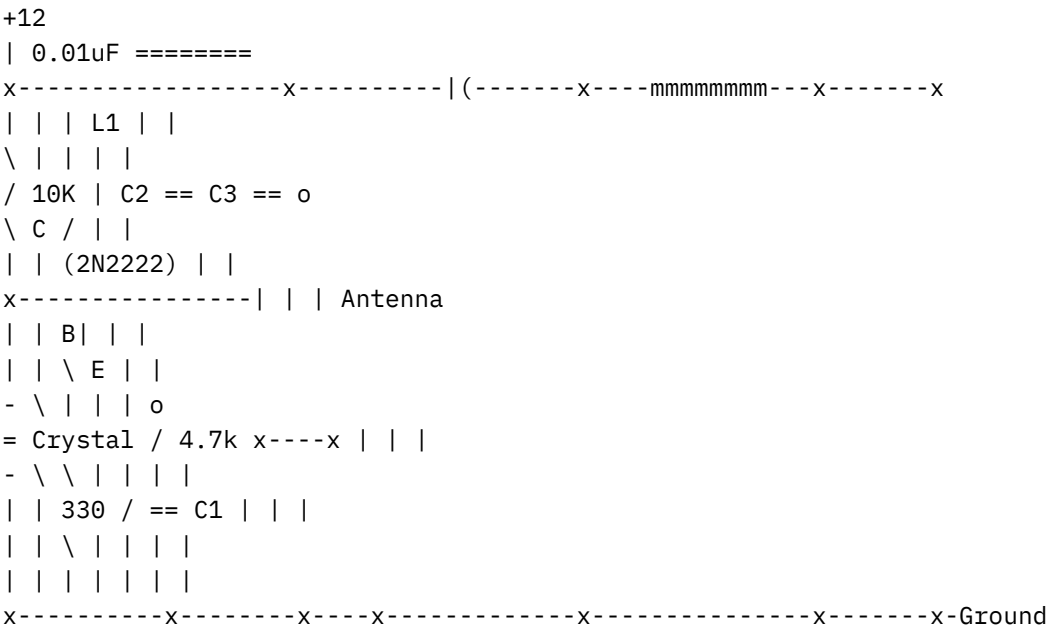
Hi,

I love to build simple circuits, and QRP rigs are a natural. Of course, I always have the standard problems: finding that last part, wiring it up perfectly except for that one section, etc.

So, of course, I have a QRP rig problem.

This is the 'standard' one-transistor rig, listed at least a few times that I've found:
CQ June 1988 pg 64-66 "QRP and 30 Meters 250 milliwatt"
CQ April 1996 pg 48-51 "Milliwatts and Micronauts'
CQ May 1996 pg 68-73 "Milliwatts and Micronauts part II"

It looks (ASCII speaking) like this:



Where C1, C2 and C3 depend on Crystal

Band	Cx	L1 (T50-2)
20m	270pf	12 turns
20m	330pf	13 turns
40m	470pf	16 turns
80m	750pf	34 turns

So the problem is, even though this rig is _SIMPLE_, I still muffed it. It's rated in these articles at 250mW. So how come I'm only getting 0.5mW into a dummyload QRPWattmeter?? I mean, sure, QRP is challenging, but I'll take

every mW advantage I can get.

I'm using a small colorburst crystal 3.579, small ceramic caps, and have tried both a plastic 2N2222's and metal 2N2222's. It's working, but not at 250mW. And it's so simple, what could I have screwed up??!!

Anyway, I'd love EMail or Posts. With one of my crystals, I need to take out the 4.7k to get it so ocsillate. If I add more pf to C1, the tone changes. If I through it in the garbage, I stop learning. I'll never learn to spell.

Thanks for your assistance. I'll take theoritical discussions on the parts, as well as overall discussion on the design.

Craig,

The big 3 in contest logging software are CT, NA, and TR. CT is the granddaddy of them all. I have not used it but believe the new version requires a PC running Windows. I've used NA before and it is easy to learn and works well on anything from IBM PCs up (running DOS). I have recently played with the older, now public domain, version of TR and have been pleased eonough to consider changing over to the new version of it. TR seems more tailored for CW opn than NA is. It runs on DOS on 286 or higher machines. Both NA and TR are in the $60 price range -- CT is more expensive, I think.

You can download the older version of TR as well as get info on the program and how to purchase the current version via TR's web page at http://www.qth.com/tr/

Good luck at Field Day!

712. QUESTION: Icom Delta 1 tick...

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-10 00:00:00 UTC
From: murphy@mail.msen.com
Message-ID: <5iip8m$65i@ftl.msen.com>
Source record: 200719

I'm hoping someone out here can verify this. I just bought a Icom Delta 1 tri-band HT. It seems to work well with one problem. When more than one band is active (i.e. 1.2GHz and 440MHz are displayed) and one of the SQL's opens then through the speaker comes a tick-tick-tick sound. With voulmes turned down it still sounds the same. No prio mode is enabled, does this with ni-cad and wall adpater. It sounds a little like just when your battery is about to die but nothing dims, etc. If I change frequency the ticking goes away for ten seconds. If both SQL's are open the tick-tick-tick goes away. Icom told me (after being on hold for an hour) that it is a battery save feature that cannot be turned off. Can anyone confirm that this "Feature" is real (but not wanted), or is this radio bad? Thank you. - Chris N8UDK

Following are digests of articles printed in the December, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:A Drift-Free VFO
Author>Makhinson, Jacob - N6NWP
Source>QST Dec 96, pp. 32-36
Abstract>Construction details of a VFO containing means to self-correct for drift. Provides stable output with very low phase noise.

Digest>One of the distinguishing characteristics of modern receivers and transceivers is synthesized local oscillators that allow operating

frequencies to be set precisely, and held indefinitely, without drift. But synthesizers have one drawback; they introduce phase noise, which may limit dynamic range, i.e. the ability to receive weak signals in the presence of strong nearby interfering signals. In contrast, classic LC oscillators can be designed to have exceedingly low phase noise, but they are not very stable.

Now N6NWP has designed a low-noise LC oscillator that operates in connection with a drift-correcting circuit that will hold the oscillator to a constant frequency. The result is a low-noise oscillator that will hold its frequency within plus/minus 20-Hz. over extended periods of time, even in the face of wide swings in ambient temperature. At room temperature, it typically holds within plus/minus 10-Hz., well within the requirements of digital modes, such as packet, Amtor and Pactor.

The oscillator is a classic Hartley using a high-Q coil and zero temperature-coefficient padding capacitors, with a conventional double-bearing variable capacitor for frequency control. It is followed by several buffers, and a low-pass filter that suppresses harmonics to at least 45-dB. below the fundamental frequency. The system described in the article is designed for a frequency range of 6.0- to 6.4-mHz., to be used with a 20-meter receiver having an 8-mHz. i.f.

The frequency stabilizer is a digital counter that counts the oscillator cycles for intervals of about 0.4-seconds, repeatedly. After each counting period, the value of the last digit of the count is held in a register and compared with the value of the succeeding count. If the difference between the two shows that the count has increased, a minute downward signal is created, and vice versa. Thus the frequency control continuously "hunts" around the point of stability. The time constant of the integrating circuit that actually does the controlling is 6.5-minutes, so short-term variations in the count rate are well smoothed out before each incremental nudge is given by the count-comparator circuit.

When the operator deliberately changes frequency, a large upset would be introduced into the stabilizer circuit unless provision was made to prevent it. In this design, a sensor is attached to the knob that turns the tuning capacitor. When it senses that the knob has been moved, it disconnects the counter circuit from the integrator until 3.6-seconds after the knob stops moving. At that time, the stabilizer circuit resumes operation and no detectable upset occurs. The knob sensor is a disk with notches around its periphery. A light-and-photocell combination detects when the notches pass, causing repeated interruptions of the light beam.

The article contains complete descriptions of the operation of the various circuits, schematic diagrams, parts list, and construction information to duplicate the system.

Title>TA2:A New "Band" for Your Radio
Author>Millner, James - WB2REM
Source>QST Dec 96, pp. 37-40
Abstract>Digitizing software allows voice to be sent over Internet. Using it, individual stations or VHF/UHF repeaters can be linked over long distances.

Digest>Over the last couple of years, software has been introduced to allow voice signals to be digitized and sent over the Internet. Two hams, KC9KY and N9YNQ, realized that this makes it possible to link VHF/UHF repeaters through the Internet to other repeaters in distant cities throughout the world. They developed a software package, which they call Repeater Link (RptrLink), and also built a very simple interface box that will turn any computer with a Sound Blaster, or compatible, sound card and running Windows, into a radio/internet simplex gateway.

The main function of the interface is to act as a VOX receive/transmit changeover switch. For the VOX function, the design uses a Radio Shack tape-recorder VOX unit. The only other components required are one SPDT relay, a 500,000-ohm pot for gain control, and a number of plugs and jacks. A schematic and parts list are included with the article.

With the use of this software and hardware, any ham can turn his station into a gateway. Any mobile station within range will be able to place a call to individuals, or repeaters, thousands of miles away, and vice versa. Also possible is a link through a TNC to transmit RTTY, packet, or other digital modes. In this way, packet network linkages can be vastly expanded, and amateurs with Technician licenses will be able to work worldwide DX (although it will not qualify for DXCC!)

The "Internet Phone" software package is shareware, available from VocalTec, 35 Industrial Parkway, Northvale, NJ 07647; E-mail: info@/vocaltec.com. It is shareware, and can be downloaded for a free 30-day trial period. At the end of the 30-days, it must be registered, for a fee.

RptrLink is available at: http://www.onramp.net/swta/rptrlink. It, also, must be registered for a fee of $25.

Title>TA3:Get on 440-MHz ATV! - Part 3
Author>Sheets, William - K2MQJ, and Graf, Rudolf F. - KA2CWL
Source>QST Dec 96, pp. 41-42
Abstract>Final part of article describing assembly of an amateur TV (ATV) station.

Digest>This third part of the three-part article describes the setup of the equipment built in accordance with the first two parts, plus associated apparatus, to make an opertional ATV station. The transmitter and the receive converter are connected, through a transmit/receive relay (T/R), to a video monitor or TV set. The T/R circuit directs the full output of the receiver directly to the monitor; a

sample of the locally-produced video goes through an r.f. modulator to the same monitor. A line sampler is used to provide the video sample. It contains a circuit that utilizes a hot-carrier diode and a single-transistor buffer to provide an r.f. signal of proper level to feed the monitor.

The authors recommend a small CCD camera as a good source of video for the station. They suggest either a small security camera, or a home-built one using a PC-board camera mounted in a case. Black-and-white cameras are available for some $150, and are best for operating in low-light conditions. Color cameras are more expensive, and require much more light; if used in incandescent light, they must have color filters in front of the lens to compensate for the large amount of red and near-infrared light the bulbs emit.

It is important to any ATV operator to understand the amount of power an ATV signal requires. A good ATV picture requires a 30-dB. signal to noise (S/N) ratio, as contrasted with SSB which can be easily readable at a 3-dB. S/N. At the same time, even a 2-meter FM signal requires a bandwidth of only about 12-kHz., but the fast-scan AM TV used on 440-mHz. requires 3- to 4-mHz. bandwidth, 300 times as much! The extra bandwidth causes about 25-dB. more noise in the channel over that of the FM signal. Hence, compared with 2-meter FM operation, ATV requires about 50-dB. higher S/N!

For these reasons, for any transmission distances greater than a few blocks, high-gain antennas mounted high and in the clear plus relatively high-power output is required.

Title>QST Compares: Multiband FM Mobile Transceivers
Author>Ford, Steve - WB8IMY
Source>QST Dec 96, pp. 60-65
Abstract>Performance review of four VHF/UHF transceivers: Alinco DR-605T, ICOM IC-2710H, Standard C-5900DA, Yaesu FT-8000R.

Digest>This article is a review of four VHF/UHF transceivers: Alinco DR-605T; ICOM IC-2710H; Standard C-5900DA; Yaesu FT-8000R. All four models provide the following standard or optional features:

Extended VHF reception (FM)
Switchable output power levels:
144-mHz.: High power - 50-watts
Medium power - (all but Alinco) 10-watts.
Low power - 5-watts or 3-watts
440-mHz.: High power - 35-watts
Medium power - (all but Alinco) 10-watts

Low power - 5-watts or 3-watts
Memory channels per band: 50 to 100
Band, memory and programmed scanning
CTCSS decoder
Cross-band repeat

All except ICOM provide extended UHF reception (FM). All except Alinco provide aviation-band (AM) reception, and a DTMF autodialer. All except Alinco and Yaesu provide a DTMF decoder. All except ICOM are equipped for 9600-bit/second packet, including a dedicated TNC jack. All but Alinco and Yaesu provide detachable front panels that can be mounted on or near the dash, with the main cabinet placed elsewhere.

Alinco DR-605T
This unit is the least expensive of the four, and lacks some of the features of the others, but gives excellent performance. It is relatively simple to operate and the front panel only contains ten controls, which are relatively large. Street price is about $453.

ICOM IC-2710H
The IC-2710H is a sleak and rugged unit. Most operations can be controlled by the keyboard built into the microphone/speaker housing. The buttons are back lighted for nighttime operation.

The unit was not especially designed for packet use and can be used only for 1200-baud operation. There are two tuning knobs, one for the main band (transmitting) and the other for the sub-band (receiving). It contains separate VHF and UHF r.f. front ends, so there are separate volume controls and squelch controls.

The only significant drawback the reviewers noticed is the fact that it cannot operate below 440-mHz. This prevents users from contacting the powerful repeaters on the Russian MIR space station and on the OSCAR-27 satellite.

Street price is about $700.

Standard C-5900DA
This is the only triple-band transceiver in the group. In addition to the 2-meter and 70-cm. bands, there is also 6-meter band operation. Its rated power outputs on that band are 45-, 10-, and 3-watts, for high, medium, and low power respectively. It has an extended operating range on 70-cm., so can be used to work the MIR space station repeater. One reviewer carried on a QSO with another mobile station 500-miles away, using the MIR repeater.

Its separable front panel is somewhat larger than some of the others and its display is correspondingly easier to see. One very popular feature is a set of "hyper memory buttons". They provide one-touch memory programming. After once being set, they operate just like the push-buttons on an AM car radio.

The unit is well designed for packet at either 1200- or 9600-baud. The reviewers summarized by saying that the C-5900DA is "a fairly complex rig, but the manual is complete and allows one to utilize all the features with ease."

Street selling price is about $880.

Yaesu FT-8000R
This rig is a very compact unit. It offers the widest receiving coverage of the four, providing listening from 110-mHz. all the way to 1.3-gHz. (except cellular telephone frequencies). Reviewers praised the r.f. squelch function that uses the S-meter level to set the "break" point of the squelch.

It has a uniquely convenient display. Blinking green LEDs on each side of the front panel show which receive channel is active. The same LED turns red during transmitting.

For use when the operator is driving through new territory, the rig has an "enhanced smart search" that will automatically sweep each band and store active frequencies in 50 dedicated memories. It can be set to search all, or part, of a band and can perform multiple sweeps.

Street price is about $542.

Title>PR2:Timewave DSP-599zx Digital Signal Processor
Author>Danzer, Paul - N1II
Source>QST Dec 96, pp. 65-67
Abstract>Review of a new DSP unit for attachment to the output of a receiver. It provides excellent performance and some new features that simplify operating procedures.

Digest>DSP systems have been available to hams for five or six years, and available equipment has been considerably improved in that time. The DSP-599zx represents the latest technology. It provides all the features of the older units, with significantly better results, plus a number of new features not seen before.

Earlier systems used 8-bit, or 10-bit A/D converters. This model has a full 16-bit A/D, which gives it much better dynamic range. It has a very effective AGC that essentially eliminates the problems common to older DSPs caused by saturation from strong signals. Also, the processing speed is 36-million instructions per second (36-MIPS).

The reviewer found that it does a superb job of suppressing random noise. Its band-pass filter characteristics are best illustrated by the measured shape factors. The ARRL laboratory found both voice and CW filters to have -6 to -60 dB. shape factors of 1.1, or better. This means that the bandwidth at 6-dB. down is only 10-percent narrower than at 60-dB. down. That is about as close to the legendary "brick wall" as can be imagined! Unlike older systems, one can characterize the filters by setting the low cut-off and high cut-off frequencies independently, in 5-Hz. steps. A CW tone can be activated that marks the center

frequency, so it is easy to tune a signal to the exact center. Alternatively, a number of pre-characterized filters can be selected, optimized for various modes of operation such as CW, SSB, RTTY, SSTV, packet, HF packet, the various 'tor modes, and others.

The DSP-599zx has two sets of inputs and outputs, selectable from the front panel. These can be connected to two different receivers. It also contains six memories that can be set up to characterize six sets of filters or other function adjustments. Finally, the unit can be used as an audio test and RTTY FSK test signal generator; as a millivoltmeter; and as a RTTY TNC.

Title>TC1:Hunting AC Line Noise in an Amateur Radio Receiver
Author>Newton, Jr., C. A. - W5JNG
Source>QST Dec 96, p. 70
Abstract>Finding an obscure source of line noise. It came from a faulty power supply diode, but got into the receiver via radiation from the power line.

Digest>W5JNG encountered a serious problem with his new HF transceiver after he had been using it for only a few months. Suddenly, a line noise developed that measured as much as S-9 on his S-meter. It was only heard when the antenna was connected.

He tried all conventional and familiar methods of tracking down the source of the noise, without success. One day, the separate power supply failed. He traced the problem to a failure in the rectifier diodes and, when he replaced them, the noise disappeared. He discovered that the noise had been caused by a failing diode, but the noise did not get into the receiver directly via the d.c. power lead, because of the filtering. Instead, it followed the a.c. line cord to the house wiring, which radiated it to the antenna.

Title>TC2:Propagation Beacons and Other Signals
Author>Potter, Martin H. - VE3OAT
Source>QST Dec 96, p. 70-71
Abstract>A reminder that HF beacons provide quick checks on propagation around the world.

Digest>With the upswing of the sunspot cycle nearly upon us, VE3OAT reminds us of the 20-meter beacons that operate on 14.100-mHz. from locations nearly throughout the world. Other amateur beacons operate on other bands, most notably on 10-meters. In addition, there are several other stations that provide valuable check points.

Two of them are Russian time signal broadcasters, RWM near Moscow that broadcasts on 5996-, 9996-, and 14,996-kHz., and RID at Irkutsk, on Lake Baikal in central Asia, that operates on 5004-, 10,004-, and 15,005-kHz. These sites are especially useful because the short paths to the continental USA pass through the polar region and reception of the signals gives a good measure of polar conditions, including aurora.

Long haul east-west signals can be monitored from VNG near Sydney, Australia. It broadcasts on 8638-, 12,984-, and (sometimes) 16,000-kHz. The author likes to use the 8639-kHz. signal to look for 40-meter openings to the southern Pacific.

Title>TC3:Measuring Meter Resistance
Author>Erdman, Arthur C. - W8VWX
Source>QST Dec 96, p. 71
Abstract>Another method of measuring resistance of a meter movement. Accuracy is determined by the precision of a known resistor value, not the accuracy of an ohmmeter.

Digest>W8VWX adds another good suggestion to the collection of ideas that have been printed in QST over the last couple of years for measuring the internal resistance of a meter movement. The method described by W6VAT in QST Aug 96, p. 71, involves adjusting a variable resistor until its resistance is exactly equal to that of the meter, then disconnecting the resistor and measuring its resistance with an ohmmeter.

Mr. Erdman suggests that the meter be connected in series with a d.c. power supply, a variable pot, and a resistor with a precisely-known value; then the voltage drop across the meter and also across the precision resistor should be measured. The meter resistance can be calculated by: R(m)=(V(a)/V(b))*R(x) in which V(a) is the voltage drop across the meter; V(b) is the voltage drop across the precision resistor; and R(x) is the ohmic value of the same resistor. Best accuracy is achieved if the supply voltage, or the variable pot, is set so that the current through the meter drives it full scale.

Title>TC4:A Constant-Current Source for Measuring Meter Resistance
Author>Goceliak, Anthony J. - WB2LJW
Source>QST Dec 96, p. 71
Abstract>Construction details of a simple constant-current source.

Digest>This writer submits another suggestion for the measurement of meter resistance. W6VAT's suggestion in QST Aug 96 requires a constant-current source. WB2LJW provides a schematic diagram of a simple one that can be adjusted to about 1-milliamp. It is made of a single transistor, 2N2907. A 12-volt power supply is assumed. The lead from the power supply to the emitter of the transistor contains a 470-ohm resistor in series with a 500-ohm pot. The power supply is connected to the base of the transistor by two 1N4001 diodes, in series, forward-biased. From the base to ground is an 8200-ohm resistor.

The constant current flows from the transistor collector to ground. The author explains that the two diodes each cause about 0.7-volts drop. Also, the emitter-base junction causes about the same drop. With the pot adjusted so as to cause 1-milliamp to flow, the transistor acts to maintain a constant voltage drop through the two resistors in the emitter circuit, hence forcing the current to remain constant.

HINTS AND KINKS (HK)
Conductor: Schetgen, Bob - KU7G

Title>HK1:A Hand Stand for Two
Author>Reaser, Scott - K6TAR
Source>QST Dec 96, pp. 68-69
Abstract>Construction details of a stand to hold an H-T transceiver for use as a home-station rig. Includes an a.c. power supply in the base.

Digest>In this letter, K6TAR describes a stand that he built to hold his ICOM 02-AT at a convenient angle so that it can be used as desk-top home-station transceiver. The base contains an a.c. power supply and a loudspeaker, considerably larger than the one in the rig. The weight of the power transformer adds stability to the base. The power supply can also be used as a battery charger.

Mr. Reaser has also built a microphone using an electret element and single-transistor amplifier built into the die-cast housing of an old microphone that was scrapped. Schematic diagrams and parts lists are included for the power supply and the mike amplifier; three photographs illustrate the stand and also the microphone assembly.

Title>HK2:Sealing Antenna Rotor Connections
Author>Brindle, Dave - K1WER
Source>QST Dec 96, p. 69
Abstract>Use putty-like "Duct Seal" to waterproof containers.

Digest>K1WER recommends the use of a product called "Duct Seal" to waterproof outdoor electrical connections. It is a putty-like material that is much easier to use than the coax seal sold by amateur radio stores.

Duct Seal is made by Neer Manufacturing Company, and is available from electric supply houses or hardware stores.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Dec 96, pp. 49-50
Abstract>Questions and answers about subjects of primary interest to beginning amateurs.

Digest>Questions discussed in this issue include: accessing the Internet using HF radio in digital modes; problems accessing a repeater with a PL tone system; getting time signals via Internet; accessories for HF stations; voltage baluns vs. current baluns; and a Web site devoted to the 6-meter band (http://user.itl.net/~equinox/50dx.html).

Title>NHC2:Father and Son Satellites
Author>Frahm, Bruce - K0BJ
Source>QST Dec 96, pp. 51-52
Abstract>Satellites make it possible to work DX with only Technician Class licenses.

Digest>K0BJ's 13-year-old son, John, is KB0MBS, with a Technician Class license. He was not willing to expend the effort to learn the code, so his father introduced him to DX operations via satellites.

Bruce, the father, had an HF transceiver, a 10-meter rotary beam, and an old Kenwood TS-700 2-meter multimode rig. To minimize the cost, he decided to use his existing equipment to work only Mode A satellites that receive uplinks on 2-meters and transmit on 10-meters. The Russian RS-10 is an example.

Using the RS-10 and sharing the station between them, both worked many states of the US, but no DX. To work Europe, they had to try a "bird"

with a higher orbit, the RS-15. To do so with only a 2-meter J-pole for the uplink antenna required the addition of a 2-meter power amplifier. Since adding one, they enjoy frequent QSOs, limited to about 5-minutes each, with European stations. They are eagerly waiting for the launch of the Phase 3D that will give them the opportunity to work real DX.

Title>NHC3:Thirty Minutes on 432
Author>Ford, Steve - WB8IMY
Source>QST Dec 96, pp. 53-54
Abstract>QST's managing editor works the 70-cm. band for the first time.

Digest>QST Managing Editor, WB8IMY, had never operated on UHF frequencies. In order to give it a try, he borrowed some equipment to operate on the 70-cm. band during the 1996 ARRL UHF Contest. On the day of the contest, he found that he would have about 2-hours of free time, so he borrowed a transceiver and a Yagi antenna. Lacking a tower to mount the antenna at a height, he put the equipment in his car, drove to the top of a hill, and made a temporary lash up to put the antenna on a pole clamped to the body of the car.

He succeeded, but the setup took more time than he had expected, so he could only spend about 30-minutes in the contest. But he made good use of the short time and made about ten contacts, some over distances of more than 200-miles.

Title>NHC4:Decoding the Secrets of CTCSS
Author>Collier, Ken - KO6UX
Source>QST Dec 96, pp. 55-56
Abstract>Explains various uses of continuous tone-coded squelch systems (CTCSS) tones.

Digest>This article describes "continuous tone-coded squelch systems (CTCSS), and how they are used by VHF/UHF repeaters, and others. Most FM transceivers are able to send CTCSS tones, but the ability to receive and process them is usually an extra-cost option. A rig equipped with a CTCSS decoder can be set to respond only to stations that transmit a continuous low-frequency tone, in addition to the voice signal. Any one of 40 prescribed audio frequencies can be selected as the key, so use of the system provides a way to keep the receiver silent unless a signal is received from someone using the correct tone.

Usually, it is repeaters that are equipped with a CTCSS decoder, and the users must transmit the tone in order to access it. But sometimes repeaters transmit CTCSS tones, and the users must have a decoder in their radios. This is done to overcome a problem in congested areas where two repeaters are on the same frequency and close enough together that there is some overlap in their geographic coverage. This might allow a user to access both repeaters at the same time. Requiring that the CTCSS tones must not only by transmitted, but also received, eliminates that possibility.

Title>NHC5:Explore HF/VHF Digital and Image Modes on the Cheap
Author>Cox, Donald - AA3EK
Source>QST Dec 96, pp. 57-58
Abstract>Digital modes, as well as image modes, can be tried by hams using only normal station equipment and a computer. It requires readily-available software and a simple interface, described.

Digest>"Digital modes" mean RTTY, packet, Amtor, Pactor, and others; "image modes" means slow scan TV (SSTV), Wefax (weather maps), and some others that create graphics on the computer monitor. Amateurs who are dedicated operators on one or more of those modes usually buy TNCs or multimode controllers dedicated to that use. However, it is possible to try many of the modes using only the station transceiver, a personal computer, some readily-available software, and a very simple and inexpensive receiver interface.

Several software packages are available, notably including HamComm, JVFAX, and PKTMON. They are either freeware or shareware and are available on the ARRL Hiram bulletin board at (860) 594-0306 or via Internet download from ftp://oak.oakland.edu.

The article contains a schematic diagram and parts list for the interface. The computer required is an IBM-compatible PC with a 386 CPU, or better, VGA graphics, and color monitor, running DOS 3.0, or later.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Ham Span the Atlantic on Shortwave!
Author>Kelley, Bruce L. - W2ICE and Hudson, Donald G. K1TZR
Source>QST Dec 96, pp. 28-31
Abstract>Celebrates the 75th anniversary of the first transatlantic message sent by amateur "shortwave" radio.

Digest>Seventy-five years ago, on December 11, 1921, the amateur station 1BCG succeeded in sending a message across the Atlantic to Ardrossan, Scotland. It was received by Paul F. Godley - 2ZE, a representative of the ARRL, who had taken his radio equipment to Scotland for that purpose. The frequency used was 1350-kHz.

Amateurs had been forbidden, by law, from using the "longwaves", which were considered the most valuable for long-distance communication. They were required to confine their activities to the "shortwaves" shorter than 200-meters. At the time the law was written, shortwave communication utilizing reflections from the ionosphere was unknown.

The transmitting station, 1BCG, was specifically built for the 1921 test. It was located in Greenwich, Connecticut, and a "flattop T" cage antenna was erected atop two steel masts, 108- and 75-feet (33- and

23-m.) tall. The flattop was 100-feet (30.5-m.) long, made in two sections; each was a cage 50-feet (15.2-m.) long with 8 No. 14 AWG wires equally spaced around 18-inch (46-cm.) diameter metal hoops. At the center junction between the two halves, a downlead led to the operating shack directly underneath. The antenna was driven as a Marconi, against a counterpoise made of 30 radial wires, each 60-feet (18.3-m.) long on poles 7-feet (2.1-m.) high.

The 1BCG transmitter was comprised of a Colpitts oscillator, using one UV-204 Radiotron tube driving an amplifier using three of the same type tubes, in parallel. A motor-generator set developed 2000-volts d.c. for the plate voltage.

The tests started on December 7, 1921, but it was not until 0300 Greenwich Mean Time (GMT, now known as UTC) on December 12 that the first message was successfully copied.

The tests were sponsored by the Radio Club of America. Six members of the club, led by Edwin H. Armstrong, built the station and operated the transmitter.

Title>GI2:Socorro, New Mexico - Ham City, USA?
Author>Finley, Dave - N1IRZ
Source>QST Dec 96, pp. 43-45
Abstract>The Socorro Amateur Radio Association conducts many activities that might be copied by other ham-radio clubs.

Digest>Socorro, New Mexico, is the site of the National Radio Astronomy Observatory's Very Large Array (VLA) and Very Long Baseline Array (VLBA) radio telescopes; the New Mexico Institute of Mining and Technology; and the White Sands Missile Range (WSMR). Although the city has a population of only 8000, it has nearly 100 hams, 20-percent of whom hold Extra-class licenses. They have a ham radio club, the Socorro Amateur Radio Association, which is very active. This article describes a number of the activities that the club conducts, and suggests that other clubs might well benefit by imitating some of them.

Title>GI3:The 1996 "Polar Bear Express" DXpedition
Author>Hammond, Garry V. - VE3XN
Source>QST Dec 96, pp. 47-48
Abstract>Operating "railroad mobile" in Canada.

Digest>In August, 1996, ten Canadian amateurs conducted a "DXpedition" limited to travel within Canada, more particularly in the Province of Ontario and the Northwest Territory. Travel was by railroad train; then by taxi, canoe, and float plane, to various islands in the Moose River and in James Bay.

While enroute by train, they operated "railroad mobile" from the car. In one QSO, they worked W0MLY/RR, who was also working "railroad mobile" in Iowa. The author speculates that that might have been the first-ever

international railway-to-railway amateur QSO. In all, they made 3010
QSOs on 80-, 40-, 20-, 6-, and 2-meters.

Its a great idea. I have already suggested it to the ARRL 2 times
without a reply. I think an address like callsign@arrl.com would be
good also and it would be a service that ARRL could provide its members
free and charge a nominal fee for everyone else. It is really only a
mail forwarding service. There are similar services for people who
change their address often. It is setup such that all mail sent to
"username.pobox.com" is forwarded to an established address. This
service costs $5 per year. I do not use this service nor am I promoting
it. I only mention it to indicate that what you suggest is very easily
done. Regards Bo KD4TL

CONTEST CALENDAR
April 10, 1997 Edition (97.4)

Please send corrections and additions directly to me. I will post an
updated calendar on a monthly basis. Thanks to SM3CER, VK1FF, HB9HFN,
AL7J, N9NPP, W5HNS and SM3OJR for contest info.

An HTML version of the calendar is available on request, or the most
recent calendar may be found at:
http://www.primenet.com/~scdxc/contestcal.html

73 de Bruce, WA7BNM (bhorn@netcom.com)

The contest calendar is divided into two sections:
1) CONTEST CALENDAR: Calendar showing dates and times of scheduled
contests.
2) CONTEST LOG SUBMITTAL DEADLINES: Deadlines and addresses for
submitting logs for contests that have
already occurred or whose deadline will pass
before the next issue of the calendar.

CONTEST CALENDAR:

Please note that you may not be able to operate during all of the total
hours of the contests listed below. Total operating time may also vary
by entry category. See individual contest rules for allowed operating
hours.

April 1997

Japan Int.DX Contest, 20-10m 2300Z, Apr 11 to 2300Z, Apr 13
QRP ARCI Spring QSO Party, CW 1200Z, Apr 12 to 1200Z, Apr 13
His Maj. King of Spain Contest 1800Z, Apr 12 to 1800Z, Apr 13
UBA HF 80m Contest 0700Z-1100Z, Apr 13
ARRL 144-MHz Spring Sprint 1900-2300 local, Apr 14
Australian Post Code Contest 0000Z-2359Z, Apr 19
YU DX Contest 1200Z, Apr 19 to 1200Z, Apr 20
EU Spring Sprint, SSB 1500Z-1859Z, Apr 19
Holyland DX Contest 1800Z, Apr 19 to 1800Z, Apr 20
Michigan QSO Party 1800Z, Apr 19 to 0300Z, Apr 20 and
1100Z, Apr 20 to 0200Z, Apr 21
ARRL 222-MHz Spring Sprint 1900-2300 local, Apr 22

SP DX RTTY Contest 0000Z, Apr 26 to 2400Z, Apr 27
Helvetia Contest 1300Z, Apr 26 to 1300Z, Apr 27
QRP to the Field 1300Z, Apr 26 to 0100Z, Apr 27
Nebraska QSO Party 1700Z, Apr 26 to 1700Z, Apr 27
Ontario QSO Party 1800Z, Apr 26 to 1800Z, Apr 27
ARRL 432-MHz Spring Sprint 1900-2300 local, Apr 30

May 1997

MARAC County Hunters, CW 0000Z, May 3 to 2400Z, May 4

718. Jeff's inaccuate Watts->dBm conversions, final chapter ...

Newsgroup: rec.radio.amateur.misc

So far you haven't screwed it up ... (but it's early yet ...)

> Now apply the logarithm function
> to both sides. That gives log(1mW) = log(1W) - 3, or
> 10*log(1mW) = 10*log(1W) - 30.

OK, 10*log(1mW) = 10*log(1W)-30 is correct, but that's NOT
the same formula where you screwed up by 60 dB before.

What you have expressed is simply that 1mW = -30dBW,
but that was NOT the original question ...

If I remember correctly at this point without going to Deja News to
search it out, the originial question was:

How do you express 10 Watts in dBm? (or "How do you convert
10 Watts to dBm?")

And the original person who volunteered an answer said:

10log(10W)+30 = +40 dBm

and you jumped in and said "incorrect!!!" and asserted that
the correct answer would be:

10log(10W) MINUS 30 (which would equal -20 db_something),
which is 60dB off from the correct answer, because 10 Watts
is, of course, +40dBm ...

Since 60dB in power is a factor of 10^6, I submit that your
accuracy sucks. (particularly for a teacher of higher math)

> Let's have some fun; see if you can
> determine why this is different than the "standard" formula.
> (Apparently you can't since you keep saying the above is not valid.)

I didn't say your (new) example wasn't valid ... I said it was not
the formula that was asked for in the original question, nor the
formula that you (incorrectly) declared "incorrect." You've tried
in a rather infantile way to change the situation to cover the fact
that you made a stupid mistake on a very simple math problem
because your ego can't allow you to admit your error ... plain and
simple.

>(The above is what could be called a math "practical joke".)

The joke is on you, Jeff ... or more accurately you *are* the joke.

It will be very interesting to see if you finally can muster the balls to
admit that you, the "high and might math wiz of U of H," screwed
up a simple conversion formula that any ham should know to
get a basic license ...

I'm afraid the "joke" is that you don't seem to be able to comprehend
or admit) such a simple error on your part ... why is it that you can't
just say "OK, I jumped the gun and told the guy with the right answer
that he was wrong. I screwed up." ???

To all of you radio amateurs out there ! A plea for help from
someone bogged down at the moment.
I have obtained the wxsat software which works perfectly with
prepared .wav or .bmp files. I have also obtained a sound card (Idema
sound card series Schubert which is a 16bit ES1868 card) This has been
set up with port 220H, interrupt 10 [to avoid clashes with network card
set to 5] and DMA 1. It is set for wave file processing at 11.025kHz,
mono, 8 bit
No matter how I try I cannot produce a .wav file from the system
even though the input (into the audio plug on the card) produces sound
from the monitor speakers. I can also play CD's via the CD player,
but....NO .wav file at all. I have tried live signals, and recorded
signals all to no avail. I have even tried to contact ESS technologies
in the States by e-mail but have had the message returned with this
address unknown. So at the moment I am having to suck my thumb, mainly
since I am neither a radio amateur or a computer "literate". The
setting up of the system was done for me as I am essentially an amateur
climatologist (retired).
So, can any of you boffins out there throw any light on my
problems and even suggest what I can do to get a .wav signal. Have I
got a duff sound card ??
Thanks for any help or guidance,

--

Charles P. Hobbs <transit@primenet.com> wrote in article
<334C0B6F.5FA2@primenet.com>...
> We could allow any amateur radio operator to have a domain name of
> <callsign>.ham. Examples; k6xyz.ham, w6abc.ham, g1zzz.ham, etc. . .
>

There ALREADY IS a top level domain for hams ... it's

ampr.org

(AMateur Packet Radio.org)

The entire domain space is administered (last I knew) by Brian Kantor
(can't remember his callsign) at UCSD ... Brian has enlisted area
coordinators around the country to parcel out subnet addresses to
the hams in their area ...

Anyway, the point is that we have had a top level domain for many years.
We simply haven't made full use of it yet for several reasons ... (IMHO)

1) too many hams are too damned cheap and narrowminded to try
somthing beyond 1200 baud AFSK on 2m to connect to their local
BBS or DX cluster
2) item 1 makes it difficult to gather "critical mass" in many areas
to implement better systems for people to use, resulting in a "Catch 22"
or "chicken vs. egg" sort of barrier to progress
3) backward technical rules for things like permissable bandwidth,
baud rates, and use of new techniques like SS have caused stagnation
4) content rules and 3rd party rules, coupled with placing responsibility
for such matters on people beyond the originating station operator have
made it practically impossible to intergrate the ampr.org domain into the
rest of the internet in a way that makes it most useful and could provide
tremendous public service capabilities in times of disaster ...
5) I could go on, but I'm getting off on a bit of a tangent relative to
your
basic question ...

73,

Yes I know that this is an OLD radio :)
But I am Hopeful that someone can help me so that I can help a potential
Ham (friend of mine who is currently studying for his first license). What
is needed is a copy of the manal or maybe a transrcipt of the instructions
for a Yaesu FT-209-RH. I have been at Yaesu's site with no success :(
Any help in this matter would be greatfully received.
Please send replies to:

T.>applies to ham radio.

This is turning into nothing but a nyah-nyah session on who can do
what in mathematics. Why not get it into the AMATEUR RADIO arena and
pose a problem in how to get a better match to an antenna? Getting
the most power radiated is a more pertinent question. Do you know
how to handle a complex quantity? Do you know what each part is?
Can you USE what impedance you measure to achieve a best match?

CBD>From: cbdye@speakeasy.org (Christopher B Dye)
CBD>Subject: Re: CW

CBD>There was a point in time that CB required you to get a license from the FC

That NEVER happened. The only thing required in the first three
years of the citizens band service was a PERMIT. Not a license, just
a permit similar to permits issued to aircraft and pleasure boats
that used radio.

CBD>It didn't have any really difficult testing requirements and a ton of peopl
CBD>ended up on CB.

There was NO TEST. A form was filled out and that was that.

CBD>My father was one of them -- KAVH0550. Then, as more and
CBD>more people ended up using CB, it became fairly useless unless you wanted t
CBD>listen to people lambast you and use profanity.

My 1959 permit has "11W8893" as the "call sign." The "K" call signs
came a couple years later when the FCC noticed their error.

CBD>The FCC allowed no-code licenses at some point (I don't remember).

Only six years ago; the no-code Technician class. There were PERMITS
issued in several radio services, but, up to six years ago the
amateur service always required all amateur licensees to test for
code proficiency.

CBD>I view the code requirement as a part of amateur radio which indicates I am
CBD>willing to give up a little of my time to learn a new aspect of radio usage
CBD>Furthermore, experience while in the military working as a signals
CBD>intelligence analyst provided me with insight as to the continuing
CBD>usefulness of CW. When digital signals, SSB voice, or whatever couldn't
CBD>be understood at the distant end, code came through.

I was in the Signal Corps running trans-Pacific communications 1953
to 1954. NONE of the circuits were OOK CW, all of it was TTY or
voice, some FAX. As to "CW always coming through," that is nonsense
whether it was 1957 or 1997. To see what Army Signals ARE USING, go
to www.atsc.gov and browse FM 24-24 for the specs of U.S. Army signal
equipment of all kinds. Comm is voice, secure voice, digital, secure
digital, TTY, secure TTY, and video via troposcatter and satellites.
The U.S. Army doesn't do OOK CW in tactical communications.

>addressing is concerned ... right?

No, you could setup a .ham domain and have some system handling mail
for *.ham using an MX record. Of course that system would need an IP
address when it would accept mail from the Internet, but that IP address
would not have to be assigned to the .ham domain in any way.
(i.e. it could just be the existing address of a machine on the net)

Actually, some things are already in operation:

- the amsat.org domain offers mail forwarding (which you apparently would
like to have, although it is in no way directly related to having a domain)
mail sent to callsign@amsat.org will be forwarded to an Internet mail
address you have registered at AMSAT.

- the ampr.org domain exists and has many amateur callsigns registered.
however, the IP addresses assigned in this domain are primarily intended
for use in the amateur packet radio network. some callsigns (a vast
minority) have an MX record in the ampr.org domain that forwards their
mail to some other system. the MX principle is not really suitable for
mail forwarding at this level.

I agree there could be some place for a .ham domain which would allow
consistent mail addresses for hams, and would not require a member to
register an IP address just to have mail forwarding.
With a suitable software configuration it should be no problem to accept
mail to user@callsign.ham and have it forwarded to anyone@internet.provider.xx

However, when such a thing is setup it should be done in such a way that
multiple (preferably regional) servers can be used to share the load
and avoid dependency on a single system and/or country.

(I have all my mail forwarded by amsat.org now, but it would be nice if
such a system were available locally in my country so that I don't run
the risk of somehow importing and exporting something in the USA when
someone outside the USA sends me something that would be illegal to export
from the USA, like the apparently super-secret DES sourcecode)

727. SOLAR STORM CREATING LARGE ENHANCEMENTS IN MAXIMUM USABLE FREQUENCIES

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-11 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5ikeod$iga2@mars.online.uleth.ca>
Source record: 200535
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

The large solar coronal mass ejection of 07 April has impacted the Earth.

Middle and high latitude geomagnetic observatories are currently reporting significant levels of geomagnetic activity. Boulder reported a magnetic deviation of over 200 nT from 02:00 to 03:00 UTC, resulting in a geomagnetic K-index of 7 (severe geomagnetic storming). Many other regions are observing minor to major storm conditions at the present time.

There is a high probability geomagnetic activity will surpass the minor storm threshold over the next several hours.

Radio communicators should keep a close eye on critical F2-layer frequencies plotted by SWARM for the various world-wide ionospheric observatories. Critical frequencies and therefore maximum usable frequencies have skyrocketed over the last 3 to 5 hours. Almost the entire eastern and central regions of North America are experiencing large increases in maximum usable frequencies by as much as 30 to 60 percent ABOVE NORMAL! Western regions of North America are seeing similar enhancements about 20 to 40 percent above normal. Australia is observing enhanced conditions, as is much of Europe. These enhancements are expected to be followed by more serious degradation and reduced MUF's over the next 6 to 12 hours.

The SWARM (Solar Warning And Realtime Monitor) software can be used to monitor all of these parameters and much more, in REALTIME. SWARM is proving indispensible for radio communicators during this storm. Details regarding the software can be found at: http://solar.uleth.ca/solar/www/swarm.html

Hi Mark, try putting an RF choke between the collector and the 12v
supply (I have added it to the diagram above). As originally shown, all
of your power is being shunted to ground via the power supply!

Okay, I'll start: When are you going to get licensed, Len? You spend
your time ridiculing hams and ham radio on .policy, yet I've never
seen any reference to you having a license. Without the ticket, a
more appropriate group for you might be rec.radio.shortwave.

That was for Carl. You spoiled the fun.

>Okay, that would be to say that (n+1)^3 - n^3 must be an odd number.
>If n is even:

A better representation would be this: Any pair of consecutive integers
have the form 2n and 2n+1 (opposite parity); hence, the difference
of two consecutive cubes would be either (2n)^3 - (2n+1)^3, or
(2n+1)^3 - (2n)^3.

> o Since 2 is a factor of n, 2 is also a factor of n^3,
> i.e. n^3 is even.
>
> o Since 2 is *not* a factor of n+1, 2 cannot be a factor
> of (n+1)^3, i.e. (n+1)^3 is odd.

If I were grading this, at this point I say "prove it" - in other words,
I'd want you to show me that every odd integer cubed is odd (it might
seem obvious from running off a few examples, but examples do not
prove anything.

I'll continue with my version: (2n+1)^3 = 8n^3 +4n^2 + 2n + 1 which is
of the form 2k+1 (which *now* shows an odd integer cubed retains its
parity), so (2n+1)^3 - (2n)^3 will have the form 2m+1, which is of
odd parity, and hence not divisible by two.

>Then difference between an even number and an odd number is always an
>odd number.

.... because 2s - (2t+1) = 2(s-t) - 1 which is of the form 2u-1. You've
got to show these sort of "obvious" things, or I won't give you full
credit.

>So, do I win the Toyota?

No. This was for Carl. You did the wrong problem: F-
Now I have to give Carl another problem: If f: R into S is a homomorphism
of rings and I is an ideal of R which is contained in the kernel of f,
prove there is a unique homomorphism of rings f': R/I into S such that
f'(a + I) = f(a) for all a in R. Also show that Im(f') = Im(f), and
Ker(f') = Ker(f) / I. Finally, show that f' is an isomorphism if and

only if f is an epimorphism and I = Ker(f).

742. ?? Re: Kenw. TS-830S analog dial

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-11 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <334E6BEA.542A@vbe.com>
Source record: 200550

I have what seemingly is a pretty stupid question. I am the owner of a "new" TS-830S and am very pleased with it, however while the digital freq display is right on the analog dial does not jive with the digital display (off by about 15 kHz). The manual indicates that to adjust the analog dial you must pop the top and adjust TC1 and L3 on the VFO unit to bring this "tracking" into agreement with the digital display. To do this you must also apparently remove the counter unit etc... to get at the adjustment points.

Question/opinion sought from current or former TS-830S operators:

Is this worth the trouble.....several learned gods of the air have told me that these never seem to stay in allignment anyway and to ignore the analog discrepency and as long as the digital is ok just use it.... several others also told me that if you "take apart" the main tuning knob assy one can "slip" the dial after loosening a screw to the correct setting (this does nothing to correct the actual problem though?)

Sorry for the long post.....

73 de Mike (waiting for my licence)

Both use frequesncies just outside of most ham bands. E.g. CAP uses 148.15 as a repeater output. Their inputs (If i remember) are usually 143.xxMhz. I used to be in the CAP, as the readio officer for my unit, but that was a few years back.

Someone else will have to answer on the MARS freq's.

Carl,

I may be mistaken, but I do not believe that is a top level domain.

".org" is a top level domain, "ampr.org" is a second level domain.

746. Trickle charging problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-11 00:00:00 UTC
From: bruceo@loki.isc-br.com
Message-ID: <5illha$p32$1@cnn.isc-br.com>
Source record: 200554

Hope someone out here can help. I have just started having a problem charging both my 12V and 7.2V batteries for my Yeasu FT-530.

I am able to get my 12V battery to about 10.2V, and my 7.2V battery to about 5.6V. My 12V trickle charger outputs about 17.4V, and my 7.2V charger outputs about 11.3V.

I've tried a deep discharge and long recharge. I would accept that one of the batteries could have worn out by now, but both in the same week? Seems like too much of a coincidence.

I would appreciate any ideas or suggestions. In the mean time, I will be searching the web for more info on charging nicads. Thanks in advance!

I have no interest in acting like a trained dog for Herman or Bryant by
performing tricks on command ... it was not me who told someone who
volunteered a correct answer to a question that they were wrong, then
offered a "corrected" solution that was off by 60 db (a factor of 10^6) ...

As for Jeff's contention that I "dropped out of college" ... that's not a
truly
accurate representation because "droppout" carries a negative connotation,
implying a "lazy" person who has abandoned the learning process ... I was
forced by economic and family situations to be unable to finish a formal
degree
program, but I continued the learning process ... in fact in the late
1980s, I
qualified for a credential to teach at the college level (and did teach) in
CA,
based on the Board of Education's evaluation that my combination of formal
education and years of experience as a working engineer in industry was
AT LEAST equivalent to a Master's Degree ...

> This is turning into nothing but a nyah-nyah session on who can do
> what in mathematics.

The "nyah-nyah" aspect is exactly my reason for abandoning this ... I had
hoped to simply get Jeff to come down from his (self-erected) pedestal and
admit that he'd blundered, but apparently he's not enough of a man for
that,
so further discussion on the subject is clearly destined to degenerate into
an
infanatile pissing contest and that doesn't interest me ...

> Jeff KH2PZ

Once again a beeper with seemingly limited radio theory knowledge and
expertise attempts to "wish Len into the corn field" (to borrow a phrase
that was used the other day) ... the real objection to Len (by the beepers
..
non-beepers seem to recognize Len's knowledge and experience as relevant
and furthermore support Len's right as a citizen to comment on and even
take a part in influencing changes in US ham regulations and policy) is NOT
that Len doesn't have a ham license, but rather that Len asks questions and
points out relevant problems that his technical inferiors in the beeping
community are apparently ill-prepared to understand or address ...

Jeff ... ham radio is *supposed* to be a technically-oriented pursuit ...
perhaps
if YOU can't stand the heat, YOU should get out of the kitchen rather than
trying to force Len from a position in front of the stove ... he's a far
more
competent "cook" than you and his "recipes" sound a lot more palatable ...

Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote in article
<5il59r$2na@news.Hawaii.Edu>...
>
> Carl's just mad because I've exposed his dirty little secret:

Yes, I'm (justifiably, I believe) pissed that you violated a confidence
from a private e-mail ... where you gave your word (which apparently
is worth ZERO) that you would not broadcast the fact that "my
educational educational experience is 'non-traditional' "

I didn't have to tell you that in the first place, but at the time in our
private e-mail discussions there seemed to be a reason ...

> He claims to be a professional EE

I think most people would agree that having over 25 years of productive
professional experience with the title and duties of an EE, holding patents
resulting from research (at Caltech/JPL) that leapfroged work that others
were doing as doctoral dissertations at the time (and for which they did
ultimately receive PhDs ... work that, by the way won me a "Technical
Innovation Award" from NASA), having taught at the college level (in CA
in the 80s) on the basis of a teaching credential issued by the State Board
of Education on the basis that the determined that my combined experience
and education (as of that time) were AT LEAST equivalent to a Master's
Degree in EE, and numerous other professional accomplishments in my
field would justfy my "claim" as you put it ...

Of course, *most* people (unlike Jeff) are not academic eletists who rely
on being able to peddle their "jump through the hoops" curriculum as
"the (only) way to knowledge" for both their economic and egotistical
survival
...

> (and scolds us because we don't treat amateur
> radio as the "Professional Radio Service")

The "PRS" term did NOT come from me ... actually it was coined
by (one of) you beepers who insist that "it's ONLY a hobby" because
you don't have what it takes to master the more advanced technical
aspects of modern communications techniques ...
(building your crappy 1 or 2 transistor CW TXs from parts scrounged
from old TVs is a pretty lame substitute for advancing the state of
the art, Jeff ... and that's one of our charter purposes)

I have repeatedly stated that, while I think our testing structure is
woefully inadequate at weeding out the technical "know-nothings"
I have ALSO stated repeatedly that I don't feel that the tests should
require professional EE level knowledge ... a test far beyond the
current extra class test would fall far short of that ...

> yet he never finished school; he dropped out.

A lame attempt to disparage my qualifications ... Jeff once
"challenged" me to "compare degrees." As I've said before,
I've worked with people over the years who had advanced degrees
but were completely and hopelessly incompetent ... and I've
worked with people without degrees who were head and shoulders
above the ones who have the degrees ... "when the rubber meets
the road," it's what you can DO that counts, not the piece of paper,
which is actually the result of a lot of irreleveant, bullshit, makework
that the institutions require to milk more tuition funds from the students,
their parents, and government education grant programs ...

I think that professional achievment ("where the rubber meets the
road") is a better measure than some "brag rag" from academia
(academia is in many cases a fantasy land FAR removed from the
realities of the REAL world where most people live and work).

I've got an idea, Jeff ... care to match *paychecks* (the value that
the productive, real world places on what *I* do vs. what *you* do???)

> He probably just sweeps the floor and makes coffee.
> Jeff KH2PZ

Again, Jeff ... wanna match paychecks??? I'll bet I'd have to give you
something on the order of a 2:1 handicap ...

I am totally new at this and my question probably shows it.

I would like to build some equipment. Various plans have schematics for a circuit board. Apparently you can copy the schematic for the board and by using a copper plate somehow make the board at home? [See - I told you this was a real novice question!]

Any help in pointing me to a book, monograph, supplier, WWW page write-up on how this is done, materials I'll need would be very much appreciated.

They use the katakana. The letters are run together to form a complete
character. HO is transmitted as ...---, KO as -.----, for example. I
saw a book somplace with it. If I find it, I will send you the
reference.

753. Re: How about a top-level domain for HAMS

Newsgroup: rec.radio.amateur.misc

From: spammers@must.die.com
Message-ID: <wsandersE8HGtq.913@netcom.com>
Source record: 200561

Well, theoretically, anyone can operate a top-level domain server, all you have to do is convice everyone in the world to include your top-level server in their named.cache file. But there does need to be always at least one top-level domain server for a top-level-domain, and thatserer needs to be fast and highly available or the whole domain goes down. (Currently the top-level domain is ".", and is run by the Evil Fascist New World Order Trilateral Commission ^H^H^H^H^H^H^H^H ^H^H^H^H^H^H^H^H^H^H^H^H^H^H InterNIC.) The controversy over adding new top-level domains wasn't a conspiracy, there were real issues with the NICs ability to absorb the workload, or the rest of the world's ability to change the named configuration of every single DNS server in the entire world.

We all know how much hams love centralized organization, and how easily they can agree on a single unified standard for implementing a new technology like a toplevel domain server. Looks like it oughta work, yup.

BTW, IP address allocation is unrelated to domain (DNS). AMPR owns a whole "Class A" Net (44.0.0.0), enough room for us to do whatever we want (until there get to be more than several million hams using packet.) Within that block of addresses, however, we have to do our own routing (mostly). I'm not privy to my current ISP's routing tables, so I'm not so sure how that block of addresses is split up for routing with respect to the rest of the net.

Do most hams that do TCPIP have their machine set up as a router, with an AMPR IP address an he "air" side and a link their ISP on the "land" side? The Internet today is very unfriendly to unconsolidated routing like this. Hmmm.

-w

Not to split hairs, but that isn't a top-level domain. The '.org'
component is the top-level domain.

From Tad Cook, KT7H
Seattle, WA April 11, 1997
To all radio amateurs

SB PROP ARL ARLP015
ARLP015 Propagation de KT7H

Solar activity was up last week. Flux went as high as 80, and then on Monday morning there was a big eruption on the Sun that ejected a large amount of matter toward earth. It was originally thought that perhaps this might cause a big disturbance here on Wednesday, but effects weren't really felt until Thursday. As this was being written Friday morning UTC, the K index was 7 at the 0300z and 0600z readings.

''The eruption seemed to blow open a hole in the Sun's corona,'' said Dr. Barbara Thompson, a SOHO scientist.

Images of this eruption taken by the SOHO satellite can be seen at the following web site:
http://pao.gsfc.nasa.gov/gsfc/newsroom/flash/flash.htm

Watch for solar flux to drop soon to the low seventies, but then jump back to 80 by the end of the month.

Sunspot Numbers for April 3 through 9 were 46, 36, 36, 28, 16, 27 and 30 with a mean of 31.3. 10.7 cm flux was 78.8, 78.5, 80.2, 78.1, 76.8, 76.1 and 78.1, with a mean of 78.1, and estimated planetary A indices were 7, 12, 8, 11, 7, 4, and 5, with a mean of 7.7.

The JA CW DX Contest is this weekend, and since the object is to work Japanese stations, here are some path projections to Japan:

From Seattle check 80 meters from 0930 to 1330z, 40 meters from 0830 to 1500z, 20 meters from 2100 to 0000z and 0300 to 0700z, and 15 meters for marginal conditions from 2230 to 0000z.

From Los Angeles check 80 meters from 0900 to 1400z, 40 meters from 0800 to 1430z, 20 meters from 0200 to 0800z, 15 meters from 2230 to

0300z.

From Salt Lake City check 80 meters from 0930 to 1300z, 40 meters from 0830 to 1400z, 20 meters from 2030 to 0700z and 15 meters for marginal conditions from 2200 to 0200z.

From Chicago check 80 meters from 0930 to 1100z, 40 meters from 1000 to 1200z, and 20 meters from 2100 to 0000z.

From Atlanta check 80 meters from 0930 to 1100z, 40 meters from 0930 to 1130z, and 20 meters around 1330z and 0300z.

From Cleveland check 80 meters from 0930 to 1030z, 40 meters from 0900 to 1130z, and 20 meters from 2100 to 2300z.

From Dallas check 80 meters from 0930 to 1200z, 40 meters from 0830 to 1300z, and 20 meters from 0330 to 0600z, and 15 meters for marginal conditions from 2230 to 0130z and 0330 to 0600z.

Hi..
If you download RURLOC.COM off my FTP site it will
explain how to work out your locator using the NGS.. Simply put,
the whole world is divided into 100km squares these are then
sub-divided into 10km squares. Using Latitude and Longitude you can
work out where you are. Of coarse GPS gives pin-point accuracy.

> CBD>There was a point in time that CB required you to get a license from the FC
>
> That NEVER happened. The only thing required in the first three
> years of the citizens band service was a PERMIT. Not a license, just
> a permit similar to permits issued to aircraft and pleasure boats
> that used radio.
>

Number 1, the posters says, "at a point in time", Len states never happened, not in the 1st three years. Still, I beg to differ. I an looking at a copy of my original CB LICENSE (KKA3722) issued June 1974 and states...

It uses such words as CB RADIO SERVICE STATEION LICENSE (SUBPART D)

The licensee's authority...

This license authorizes...

It is a federal offense to operate...without temporary permit or license

This license is subject to the right of use and control by the Government.

My Ship Radio Station LICENSE (WXR8031) dated Oct 12, 1978 has both. The license for the ship/boat states..

This license authorizes the operation of the radio station on the specific vessel identified in the application.

The attached card states...

This PERMIT, when validated by the seal of the FCC, authorizes...to operate the licensed radio station for which this is valid.....

> CBD>It didn't have any really difficult testing requirements and a ton of peopl
> CBD>ended up on CB.
>
> There was NO TEST. A form was filled out and that was that.
>

This is correct on both counts

Hello all,

Just for the heck of it I'll be monitoring 50.400 "AM" Sat and Sunday
from 1-2 pm and 5-6 pm West coast time.

Hope to hear someone out there.

Also I have made a web page for 50mhz am.
If anyone has a qso e-mail me the info and I'll post it on the page and
we can watch it grow.

http://www.geocities.com/Hollywood/5860/50am.html

Any questions e-mail me at booth@pactitle.com

Have fun!!!!!!

SAREX/ARISS WORKING GROUP ATTEMPTING TO RESCHEDULE QSOS

When the space shuttle Columbia prematurely came back to Earth on Tuesday, April 8, so did the soaring hopes of students and teachers at 18 schools that had been scheduled to talk via Amateur Radio with the astronauts aboard the shuttle as part of the Shuttle Amateur Radio EXperiment, or SAREX. NASA decided to bring the Columbia back early after one of the spacecraft's three fuel cells malfunctioned and had to be shut down early in the STS-83 mission. The flight began a day late on Friday, April 4, and had been scheduled to last 16 days. Although the shuttle can function on one fuel cell, NASA flight rules specify that the shuttle must have three operational fuel cells. The primary payload for STS-83 was the microgravity science lab, or MSL. The astronauts were able to complete only a fraction of their scientific experiments during the curtailed flight. Three hams were aboard STS-83: Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTJ; and Donald Thomas, KC5FVF. The SAREX schedule had included contacts with schools in the People's Republic of China and Okinawa, Japan.

It's not yet known if or when any of the SAREX contacts might be rescheduled on other missions, although NASA has indicated it would like to "refly" the entire STS-83 mission--with the same crew--at a later date, possibly as early as July. The SAREX/ARISS Working Group (SAWG) has requested that SAREX be included if the mission is reflown. In the meantime, the SAWG will be in contact with NASA to find ways to give each school every possible chance to be assigned to future flights.

To help assuage some of the disappointment, NASA Payload Specialist Ron Parise, WA4SIR, took time out from his work schedule Monday at Goddard Space Flight Center to speak with some 300 thrilled students at the County College of Morris in New Jersey, one of the schools on the STS-83 SAREX schedule. Other schools might get a chance at special QSOs with the STS-83 crew members via ham radio (W5RRR) once the crew is back at Johnson Space Center.

At least one of the hams aboard STS-83 managed a few spare moments to turn on the ham gear aboard the shuttle. Al Lark, KD4SFF, of Greenville, South Carolina, was able to chat with Don Thomas, KC5FVF, aboard Columbia on Saturday, April 5. "I told him that I was the one that sent him the talking Woody QSL on his last mission. He said he remembered! It was great to speak with a fellow Cleveland boy in space!!" Lark said. Rusty Hack, NM1K, in Enfield, Connecticut, also reported hearing KC5FVF aboard the shuttle on the same day, apparently a few minutes after the QSO with KD4SFF. April 5 QSOs also were reported by KA3HPQ and N1JEZ during the same pass.

The SAWG continues to be optimistic about establishing a permanent ham radio presence aboard the International Space Station, although the ISS assembly schedule has been extended by six months. NASA announced this week that it will begin its on-orbit assembly of the International Space Station no later than October 1998. However, the schedule extension means that NASA will schedule additional shuttle missions, and the working group hopes that at least some of those flights will include SAREX. The SAWG has requested that SAREX be included in four more flights in 1997 and 1998.

In the meantime, four out of a scheduled round of ten MIREX school contacts have taken place so far with ham-astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station. At least three more school contacts remain on the schedule--Alaiedon Elementary School in Mason, Michigan, Holy Angels School in Dayton, Ohio, and Jerling Junior High School in Orland Park, Illinois. The remaining QSO schedule may be pared back in deference to Linenger's heavy research workload, but efforts are under way to carry out as many of the previously schedule school contacts as possible. Linenger is engaged in ongoing investigations of the effects of prolonged exposure to weightlessness on the human body.

Last month, Linenger assured students at two Texas schools that all aboard the space station were in good shape after a fire aboard Mir in late February. But ensuring a continuous supply of oxygen for the Mir crew has preoccupied the crew in more recent days. The primary oxygen-generating "Elektron" system, which uses electrolysis to extract oxygen from onboard waste water, has been inoperative for the past three weeks. So the crew has been igniting lithium perchlorate canisters--the same type that caused the February fire--to generate oxygen for the three-man crew while Russian

flight controllers formulate a repair strategy for the Elektron system. A Progress resupply vessel, scheduled to arrive at Mir April 8, was to carry replacement parts, food, clothing, and other supplies for the crew members. In the meantime, preparations are underway for the expected delivery of a replacement Elektron unit to Mir on the shuttle Atlantis when it visits in mid-May, retrieving Linenger and delivering astronaut Mike Foale, KB5UAC. Current plans call for that system to be installed on Mir during docked operations on STS-84.

Foale was scheduled to conclude his training at the Gagarin Cosmonaut Training Center in Star City, Russia, outside Moscow, this week and return to the Johnson Space Center to train with his STS-84 crewmates prior to their targeted launch to Mir in mid-May and the start of Foale's tour of duty aboard Mir. Foale is scheduled to be replaced in September by astronaut Wendy Lawrence, KC5KII. The last US astronaut scheduled for a tour of duty on the Mir is David Wolf, KC5VPF, in early 1998.--Thanks to NASA

FCC OFFERS BETA-TESTING ACCESS TO HAM DATABASE

For a limited time, hams and others will have real-time access to the FCC's amateur database under a beta-testing program begun this week. The FCC's Wireless Telecommunications Bureau has made available to the public three of its database applications--at no charge--for approximately 30 days on a beta-test basis. Among them is the amateur application, which allows real-time query capability of the ham radio database. Users can enter queries based on name, call sign, ZIP Code, state, club name, license issuance or expiration date or date ranges, and the native country of an alien operator living in the US.

The other programs include the frequency search program for the 929 and 931 MHz databases and the database transaction downloads. The frequency search program does a radius search for a given latitude and longitude on 929-MHz or 931-MHz stations. The database transaction download allows users to download from among a choice of seven transactions for each WTB database. Various database tables are extracted into flat files. Documentation may be downloaded, and each day's data are overwritten every seven days. At the end of the beta test period, a complete offload of the databases will be available on CD-ROM from ITS, the FCC's public access contractor (CD-ROMs are produced quarterly).

The three applications will be available from April 8 until May 12 at http://gullfoss.fcc.gov/beta.htm. Comments on the three applications go to betacomm@fcc.gov. After the beta-testing period, the FCC will make the applications available for a charge of $2.30/minute (the first two minutes of access will be free). The FCC plans to add additional applications to its beta-testing program as they become available. To enroll as an official beta tester and receive e-mail notifications about the program, send e-mail to khoutz@fcc.gov. For more information, call the FCC's Consumer Assistance Branch, 800-322-1117 or Technical Support, 202-414-1250.--FCC

MINNESOTA HAMS BRAVE WEATHER EMERGENCY

Hams geared up to help after communities in western Minnesota faced severe flooding this past week along the Minnesota River and in the Red River Valley. "To top off an already serious flooding problem, we were faced with blizzard conditions in NW Minnesota around Fargo/Moorhead and received as much as a foot and a half of heavy wet snow," said Minnesota's SM, Randy "Max" Wendel, N0FKU. The upper Mississippi River was expected toward the end of this week and work its way southward.

Additionally, those frantically trying to save their communities from flooding also had to deal with high winds--as high as 60 mph in some locations--and low temperatures over the past weekend as a low-pressure system moved across Minnesota. In southwestern Minnesota along the Minnesota River Valley, several communities were evacuated. Electricity and telephone service in the Granite Falls area was lost. The hope is that the floodwaters will recede before the ice melts and worsens the situation.

Wendel reports that an official statewide ARES HF net was activated on 3990 kHz to assist the Salvation Army in Minneapolis-St Paul. The Salvation Army is bringing in relief supplies for the Granite Falls area. "Hams have generally been providing some isolated communications for their local chapters of the Salvation Army, plus providing communication for relief efforts and supplies to affected areas," Wendel said. A lot of volunteers have turned out in support of sandbagging efforts. One small area along the Minnesota River in towns of Montevideo and Granite Falls has laid down some 400,000 sandbags in an effort to minimize flooding in their neighborhoods. Other hams have been busy reporting new flooding areas to the National Weather Service. An informal ARES HF flood net was being activated each evening (5 PM CST) on 3990 kHz to gather flood-related information.

Wendel says The Associated Press has been referred to various hams around the state to get reports from the Amateur Radio community. SEC Gary Peterson, N0ZOD, was among those contacted by the AP.--Randy "Max" Wendel, N0FKU, Minnesota SM

HAMS PROVIDE VITAL LINK DURING KENTUCKY FLOODING

More than three dozen Kentucky hams helped to fill a communication void when parts of the Bluegrass State were struck by flooding during the first few days of March that knocked out conventional communication systems and blocked highways. Members of the Northern Kentucky Amateur Radio Club--42 in all and a lot of them retired--found themselves spread pretty thinly when flooding along the Licking River cut off the town of Falmouth. Among them was John Meyers, N4GNL, the DEC for Kentucky's seventh district (which includes Boon, Campbell, Carroll, Gallatin, Grant, Kenton, Owen and Pendleton counties). The hams provided emergency backup communication (and in some instances the only communication) for several Kentucky counties, earning the praise of local officials. "We couldn't have done what we did without them," is how Craig Peoples, the Pendleton County disaster and emergency services director put it in a story in the March 31, 1997, edition of The Kentucky Enquirer newspaper. Falmouth Police Chief Greg Reis was more direct. "Those Amateur Radio operators were the only communication we had," he's quoted as saying in a report in The Kentucky Post of March 22, 1997.

Hams participated in flood recovery operations for several days after the disaster struck. In addition to handling messages, amateurs helped call in ambulances to handle health-related emergencies, traveled with the National Guard and other recovery teams in boats to emergency operations sites, helped deliver food and supplies, and helped tabulate lists of the missing. Meyers said he could have used twice as many hams, but he and the community were grateful for those who volunteered their time, effort and equipment to help others.

Fifteen hams from the Dayton, Ohio, area spent the weekend assisting the Red Cross with damage assessment in the wake of the flooding along the Ohio, Licking and Kentucky Rivers. In addition, the Dayton Amateur Radio Association communications van was stationed in Falmouth, Kentucky, on March 8, and in the Brooksville, Kentucky, area on March 9.

In addition to the hams from Kentucky and Ohio, amateurs from Florida, Georgia and Alabama also are reported to have pitched in during the flooding emergency. At least 75 hams have been cited to receive ARRL Public Service certificates in recognition of their efforts, according to Paul Mitchell, N4DUE, Kentucky's SEC.--Thanks to John Meyers, N4GNL; Bev Priest, N8VZV; and Steve McCallum, W2ZBY

INDEX LABS' BRUCE FRANKLIN AND SGC COLLABORATE ON NEW TRANSCEIVER

A collaboration between Index Laboratories president Bruce Franklin and SGC of Bellevue, Washington is expected to result in a new transceiver roughly based on the now-discontinued Index QRP Plus. The new transceiver will have a new name, several improvements and a smaller package. Franklin said Thursday that SGC has contracted with him, personally, for engineering design services to develop the new transceiver, to be called the SGC 2020. It's scheduled to debut later this year.

In a statement, Franklin made it clear that SGC has not acquired Index, its product line or its customer service obligations. He said Index, located in Gig Harbor, Washington, will continue to provide warranty service for the QRP Plus transceiver, which Index no longer manufactures. Index also no longer provides retrofit service to upgrade QRP Plus transceivers to New QRP Plus transceivers. Franklin said he's doing his best to handle customer service, but he conceded that running a one-man shop sometimes means that he is difficult to reach.

Franklin said the new SGC 2020 will retain "the basic architecture" of the QRP Plus, but with some significant differences. For one thing, plans call for the new transceiver to have up to 20 W output (continuously adjustable down to 20 mW). The new transceiver also will have an improved synthesizer design, bipolar PA transistors, better output filtering, a backlighted display (which can be turned off) and a smaller size (2.5x6x6 inches) through the use of surface-mount components. The SGC 2020 will retain the SCAF filters used in the QRP Plus design. Franklin said the idea was to market a radio with broader appeal than the QRP Plus. "We wanted to go beyond the QRP community without losing them," he said, suggesting that the SGC 2020 would also be attractive to those interested in mobile or portable operation.

The SGC 2020 will retain the low receiver current drain of the QRP Plus--about 200 mA, Franklin said. The transmitter will draw approximately 4 A on peaks. The unit is expected to weigh just 1.5 lb and will carry an introductory price tag of $595--$100 less than the QRP Plus sold for.

Franklin said SGC will be responsible for manufacturing, sales and customer support of the SGC 2020. SGC anticipates that the SGC 2020 will be available around September 1, 1997. Among other products, SGC manufactures the SG 2000 transceiver, the Power Talk and Power Clear control units and the Smartuner line of antenna tuners. SGC Sales Director Robert Gregg said that the latest details and updates regarding the SG-2020 transceiver will be posted regularly at http://www.sgcworld.com.

RS-16 STILL UNDERGOING TESTING

The newest Amateur Radio satellite, RS-16, should be ready for prime time in about two months or so. That's the word from Leo, UA3CR, in Russia. He says RS-16 is undergoing testing now. It's believed the Mode-A transponder will be switched on after testing is complete.

RS-16 was launched as part of a compound satellite package called Zeya--named after a new launch site at the Svobodny Cosmodrome by the banks of the Zeya River (the Zeya was the site's maiden launch). In addition to the RS-16 package, the Zeya spacecraft consists of an experimental navigation system, a number of experimental reflectors, solar panels and batteries. RS-16 has high speed telemetry as well as CW, but it is proving to be difficult to copy due to the satellite's tumbling. In fact, Amateur Radio operators are reported to be doing somewhat better than Russian space officials, whose receivers are said to be less sensitive than those of the amateurs. Two members of the RS group, Alex Papkov, RA3XBU, and Victor Samkov, are working at the Ground Control Center near Moscow. UA3CR is asking hams to check for possible spurious signals 30 kHz either side of the beacon.--SpaceNews

FATE OF MEXICO-OSCAR 30 CLARIFIED

MEXICO-OSCAR 30 (MO-30) project managers have concluded that MO-30 has been lost, apparently for good. Tom Clark, W3IWI, has been able to confirm unofficial reports that the satellite failed on orbit and has now been declared lost. The satellite, which also contained a 40-MHz meteor radar, was built at UNAM (The Autonomous University of Mexico) in Mexico City by David Liberman, XE1TU, and his students and launched from Plesetsk late last summer. The new satellite attained orbit and transmitted telemetry for about one day. Unfortunately, a crystal oscillator in the uplink receiver's first local oscillator (LO) never started oscillating, so the satellite was totally "deaf." Because there was no functioning uplink, battery-charging parameters suitable for the unanticipated cold temperatures could not be loaded, and the satellite ran out of power. Later attempts to revive it were unsuccessful.--AMSAT News Service

SOLAR FLARE ERUPTS; FLUX UP

Solar observer Tad Cook, KT7H, in Seattle, Washington, reports: Solar activity was up last week. Flux went as high as 80, and then on the morning

of Monday, April 7, a big eruption on the Sun ejected a large amount of matter toward Earth. It was originally thought that this might cause a big disturbance here on Wednesday, April 9, but effects weren't really felt until Thursday, April 10. As this report was being written Friday morning UTC, the K index was 7 at the 0300 UTC and 0600 UTC readings. Images of this eruption from the Solar and Heliospheric Spacecraft (SOHO) satellite mentioned here a few weeks ago can be seen at http://pao.gsfc.nasa.gov/gsfc/newsroom/flash/flash.htm on the Web. "The eruption seemed to blow open a hole in the Sun's corona," said Barbara Thompson, a SOHO scientist.

(In a lengthy posting to the AMSAT bulletin board, David Gordon of the National Radio Astronomy Observatory [NRAO] described the flare as "quite large, but of only average brilliance" and "really not that unusual or spectacular" in terms of its X-ray output. "Over the next three to six years, we can expect to see some solar flares 100 to 1,000 times more powerful than this one," he wrote.--Ed)

Watch for solar flux to drop soon to the low 70s but then jump back to 80 by the end of the month. Sunspot numbers for April 3 through 9 were 46, 36, 36, 28, 16, 27 and 30, respectively, with a mean of 31.3. The 10.7-cm flux was 78.8, 78.5, 80.2, 78.1, 76.8, 76.1 and 78.1, respectively, with a mean of 78.1, and estimated planetary A indices were 7, 12, 8, 11, 7, 4, and 5, respectively, with a mean of 7.7.

The JA CW DX Contest is this weekend. Here are some path projections to Japan:

* From Seattle check 80 meters from 0930-1330 UTC, 40 meters from 0830-1500 UTC, 20 meters at 2100-0000 UTC and 0300-0700 UTC, and 15 meters for marginal conditions at 2230-0000 UTC.

* From Los Angeles check 80 meters fro 0900-1400 UTC, 40 meters at 0800-1430 UTC, 20 meters at 0200-0800 UTC, 15 meters at 2230-0300 UTC.

* From Salt Lake City check 80 meters at 0930-1300 UTC, 40 meters at 0830-1400 UTC, 20 meters at 2030-0700 UTC and 15 meters for marginal conditions at 2200-0200 UTC.

* From Chicago check 80 meters at 0930-1100 UTC, 40 meters at 1000-1200 UTC, and 20 meters at 2100-0000 UTC.

* From Atlanta check 80 meters at 0930-1100 UTC, 40 meters at 0930-1130 UTC, and 20 meters around 1330 UTC and 0300 UTC.

* From Cleveland check 80 meters at 0930-1030 UTC, 40 meters t 0900-1130 UTC, and 20 meters at 2100-2300 UTC.

* From Dallas check 80 meters at 0930-1200 UTC, 40 meters t 0830-1300 UTC, and 20 meters at 0330-0600 UTC, and 15 meters for marginal conditions at 2230-0130 UTC and 0330-0600 UTC.

CANADIAN AWARDS ANNOUNCED

The Canadian Amateur Radio Hall of Fame awards for 1996 were announced this week. Frederick Oliver Hammond, VE3HC, was made a Member of the RAC Hall of Fame, and Ernest Harold Savage, VE7FB, received the RAC Award of Honour. The Hammond Museum of Radio in Guelph, Ontario, with its collection of equipment and tubes depicting over 80 years of wireless and radio progress, has been a labor of love for Fred Hammond.

For more information on the Hammond Museum, see "Thrills, butter Churns and Honeycombs: A Visit to the Hammond Museum of Radio," QST, Sept 1995, page 29. The Hammond Museum of Radio is now on-line at http://www.kwarc.on.ca/hammond/index.html.

Ernie Savage, a patriarch of the Amateur Radio community in Western Canada, served faithfully as Section Communications Manager and Section Manager for more than 30 years.--Jacques d'Avignon, VE3VIA

RICHARD C. KELLER, K5WA, SK

Rich Keller, K5WA, Houston, Texas, died unexpectedly March 16. He was 47. Keller was one of the earliest members of the American Red Cross Emergency (Radio Club) Communication Service/WB2QBP and served in numerous appointed and elected capacities. He maintained the club's affiliation with the CAP and both Army and Navy MARS. Keller was an ARRL life member, active in ARES and RACES, and a member of the Texas DX Society. He also was a diving instructor and involved in the Boy Scouts. An avid DXer, he was featured on the August 1991 cover of CQ. His wife, Mary Ann, and several relatives, survive. The family suggests memorial contributions to the American Heart Association, Houston Chapter, Box 20448, Houston, TX 77225 or Divers Alert Network, 3100 Tower Blvd No. 1300, Durham, NC 27707.--Larry Lutzak, WA2CNV/The Hudson Loop

BRUCE M. KARR, KN6QN, SK

Bruce M. Karr, KN6QN, of Fresno, California, died April 6. He had recently been diagnosed with bone cancer. After his retirement as a county director of communications, Karr served as the California Office of Emergency Services Inland Region chief radio officer, a volunteer position. Three daughters survive.

IN BRIEF:

* This weekend on the radio: The DXYL NAYL CW, European EME, His Majesty the King of Spain, Japan International CW DX and International HF Grid Location Contests, and the QRP ARCI Spring QSO Party, CW, are all on tap for this weekend. See April QST, page 98 for details.

* Vanity call sign update: Between March 5 and March 31, the FCC granted 435 new vanity call signs. Another 477 vanity applications ended up in the work in process (WIPS) stack for special handling. The FCC has not announced when Gate 3 will open, to permit vanity applications from Advanced-class amateurs.--FCC

* FCC proposes electronic comments: The FCC has proposed to allow electronic comments to be filed in all FCC informal notice and comment rulemaking proceedings conducted under Section 553 of the Administrative Procedure Act, except for broadcast allotment proceedings. The Commission adopted a Notice of Proposed Rulemaking April 3 (Docket GC 97-113) to permit filing comments via the World Wide Web and e-mail.--FCC

* HAARP test results: Ed Kennedy, K3NS, reports that preliminary HAARP listening test results and reports are available at http://server5550.itd.nrl.navy.mil/projects/haarp/hhtest.html on the Web. The reports suggest that best reception of the 6.99-MHz signal was on the West Coast and in Alaska.

* New frequency for Ham Radio & More: The Ham Radio & More show celebrates six years on the air on April 20. Due to the change to Daylight Saving Time, the program's shortwave broadcast frequency on WWCR has changed to 12.160 MHz. Ham Radio & More airs live Sundays at 2200 UTC. Tape-delayed broadcasts air on WWCR Tuesdays, 0800 UTC, on 3.210 MHz, and Sundays, 0500 UTC, on 5.070 MHz. For more information, check out http://www.goodnet.com/~lenwink/hrm.htm on the Web.

* Call sign database moving: Mark Downing, WM7D, is moving his Web pages to http://www.rdatasys.com/~wm7d/. This includes his call sign database. For more information, contact him at mdowning@rdatasys.com.

* George Jacobs, W3ASK, wins award: Propagation guru George Jacobs, W3ASK, has won the National Association of Broadcasters' 1997 Radio Engineering Achievement Award. Jacobs, who was instrumental in developing and launching the Voice of America and modernizing the facilities of Radio Free Europe and Radio Liberty, received the award April 9 during the NAB's technology luncheon. Jacobs is president of George Jacobs and Associates Inc and is recognized worldwide in shortwave broadcasting, having represented the US at a number of international telecommunications conferences. Jacobs has written the monthly propagation report for CQ since 1951 and is the magazine's longest-tenured columnist.

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

While "codes and ciphers" used to intentionally obscure meaning are illegal, I was not aware of a specific prohibition against American telegraph code as long as it is clear that is what is being used.

Can you point me to chapter and verse in the FCC regs , please?

Thanks

Stan

777. 1997 Bay to Breakers, Volunteers Needed in SF

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-11 00:00:00 UTC
From: Marty Brenneis <droid@well.com>
Message-ID: <334EE5EE.41B4@well.com>
Source record: 200585

The 1997 Bay to Breakers race in San Francisco is on May 18.

The American Red Cross Bay Area chapter will be providing the medical support for this event and has a need for amateur operators and medical support personnel. The services are provided in two modes, at fixed stations and by foot patrol teams. (Mobile Assistance Teams or Fanny Packers)

Each location and MAT will have an amateur operator to provide logistics and dispatch service. Many have already signed up, but more are needed so
please spread the word. Post this message on your local BBS and announce on
your nets.

The day will start at the chapter house in San Francisco at 0500 PDT and should end by 1500 or earlier.

Questions? mailto:droid@well.com or mailto:rab@well.com
For Bay to Breakers info http://www.kipx.com/breakers/

If you wish to volunteer please send the following information by email to mailto:hjsundal@usa.redcross.org AND then PRINT IT OUT and send the same info
by snail mail with a copy of your amateur ticket or medical license to:
ARCBA Bay to Breakers
85 Second St
7th Floor
San Francisco, CA 94105

Name
Address
phone numbers (home, pager etc)
email address
T-Shirt Size (You do want a shirt don't you)

For amateur operators send call sign

For medical workers state the level of training:
MD RN LVN EMT1 EMTP
Provide the authorizing agency (state, county), number of the license, and expiration date
Also provide the expiration date of the BLS CPR card and agency.

For both provide a brief (1 or 2 lines at most) description of any other experience you have had with public service or disaster operations.
If you have worked Red Cross first aid stations in the past, just let

us know apporxatmatly how many.

Also tell us if you are in a physical condition that would allow you to work on
a Mobile Assistance Team (MAT). These people will be expected to run for short
distances to get to injured runners. Those who are unable to run will be used at
fixed stations and at dispatch.

If you have good experience at net control or dispatch, please mail me too.
mailto:droid@well.com

Thanks for your help!

Actually both. Before Ohio, many a weekend and vacation on a Pearson Commander, courtesy of my parents.

During Ohio, an 18' outboard Bowrider. License was issued for this boat. Still amazed that the entire lock system on the Ohio was open to pleasure boating 24 hours a day.

Curently landlocked in northern NJ, but still hoping. Actually planning on a sailing trip around the Virgin Islands, a la Alan Alda's Four Seasons movie.

Thank you very much for posting the relevant numbers and helping stop this near state of alarm. As the local propagation guru, I've been getting phone calls and e-mails about some impending major disturbance, and meanwhile I'm watching the numbers and nothing spectacular is expected. The only flare I knew anything about was the C6/N3 event you mention, but to hear the media carry on you'd think it was an X15/extra bright.

I think a lot of people seem to want the sky to fall right now.

:-)

Wrong. Domain names can literally map to anything. Name-to-IP mapping
just happens to be the most common mapping.

> Am I missing something, or would not a domain like "k6xyz.ham" require
> the assignment of a minimum of a 256 IP address block to that domain?

No domain requires the assignment of any IP addresses. We have dozens of
customers with their own domains that do not map to *any* IP address.
The typical case here is that the domain is being used for vanity email
addresses, so the only DNS records necessary are MX records.

SB SPCL @ ARL $ARLX007
ARLX007 Minnesota hams brave weather emergency

ZCZC AX07
QST de W1AW
Special Bulletin 7 ARLX007
From ARRL Headquarters
Newington CT April 11, 1997
To all radio amateurs

SB SPCL ARL ARLX007
ARLX007 Minnesota hams brave weather emergency

Hams geared up to help after communities in western Minnesota faced severe flooding this past week along the Minnesota River and in the Red River Valley. ''To top off an already serious flooding problem, we were faced with blizzard conditions in NW Minnesota around Fargo/Moorhead and received as much as a foot and a half of heavy wet snow,'' said Minnesota's SM, Randy ''Max'' Wendel, N0FKU. The upper Mississippi River was expected toward the end of this week and work its way southward.

Additionally, those frantically trying to save their communities from flooding also have had to deal with high winds--as high as 60 mph in some locations--and low temperatures. In southwestern Minnesota along the Minnesota River Valley, several communities were evacuated. Electricity and telephone service in the Granite Falls area was lost. The hope is that the floodwaters will recede before the ice melts and worsens the situation.

Wendel reports that an official statewide ARES HF net was activated to assist the Salvation Army in Minneapolis-St Paul. The Salvation Army is bringing in relief supplies for the Granite Falls area. ''Hams have generally been providing some isolated communications for their local chapters of the Salvation Army plus providing communication for relief efforts and supplies to affected areas,'' Wendel said. A lot of volunteers have turned out in support of sandbagging efforts. One small area along the Minnesota River in towns of Montevideo and Granite Falls has laid down some 400,000 sandbags in an effort to minimize flooding in their neighborhoods. Other hams have been busy reporting new flooding areas to the National Weather Service. An informal ARES HF flood net was being activated each evening (5 PM CST) on 3990 kHz to gather flood-related information.

Wendel says The Associated Press has been referred to various hams
around the state to get reports from the Amateur Radio community.
SEC Gary Peterson, N0ZOD, was among those contacted by the AP.

Source record: 200592

Wow!

> It uses such words as CB RADIO SERVICE STATION LICENSE (SUBPART D)
>

So CB radio is not a hobby; it is a SERVICE, just
like the Amateur Radio Service. Wonder what the
service was to be: warn other truckers about the
highway patrolman just down the road a way? Or,
"Hi honey, I just left the office, should be home
in about....". Or, "Hi Good Buddy, got shur
ears on? What say this morning, etc etc".

Do the CB'ers have their equivalent to ARES and
RACES all set up, and practiced weekly? We
do here in Hawaii, but it is by those of us in
the Amateur Radio Service. Sure was glad about
it when I was on the UN Emergency net on 14265
in the Fall of '92 after Hurricane Iniki devastated our
Island of Kauai. My station was the only link to the
US mainland for many hours after, thanks to my
trusty 5 kW Honda generator and a full wave
20 meter loop formed from what was left of my
big 4-el quad (it was made a pretzed by Iniki!)
Handled much traffic to the mainland from here
for a couple of weeks, including getting a plane
load of fresh medical supplies from Travis AFB
out here to reprovision the hospital on the
West side of Kauai, KVMH. That took the help
of many other amateurs in California contacting
all available emergency supply depots, and
a phone patch link set up between one of the
hospital execs and FEMA reps in LA and DC.
Also sent hundreds of "Health and Welfare"
messages out for relay to most parts of the world from
Kauai's multi-ethnic community; caucasions
are about 18% of the population here, Japannes,
about 26% and many, many others from around
the Pacific and Europe!

Didn't get a lot of help from the CB community.

73 and have fun, Jim, KH7M
On the Garden Island of Kauai

785. Auctions was:FCC to get rid of hams

Burt Fisher, world renowned crap bag, Clinton lover, is at it
again. Burt, how about siting a source for your article? I know
you didn't write it all yourself. Fact is, that copyrighted
material is not supposed to be modified and you are supposed to
cite the source!

As far as LMDS, it operates in 28-30 GHz range. It works in
full rain and it has been working in Brighton Beach NY for
the last 5 years as a pilot. I worked on it for 4 years and
they do not need towers, rooftops work fine! 49 channels
in 20 MHz HDTV channels. Recieve antenna is a 6" square flat
panel. See Cellularvision.com for more details.

As far as seizing ham towers, who is kidding who? There
would be nothing of the sort. I feel like Burt might have
edited that in there. There would be no seizure.
Why add to the article Burt? Does it serve your purpose?
Your purpose was to make it sound like they are coming for
all amateur spectrum. Not yet! The fact about towers and
zoning is something I have first hand experience in. I have
built over 100 towers throughout the Northeast. You can
still construct them, but you might have to allow co-location
which is when several carriers locate on one tower.

Burt, you really are scum, just like that scum that lives
in the Whitehouse. No wonder why you would put up a picture
posing with him on your webpage! You are both twisted liars!

TEARA VE SCHEDULE, 1997

The Triangle East Amateur Radio Association (TEARA) holds monthly amateur radio exams In Smithfield NC. The tests are held upstairs in the Smithfield Public Library at the corner of Market St. and 3rd St. The tests are on the 3rd Saturday of each month. There is no pre-registration requirement, and test registration begins at 9:30 A.M. sharp. 610 forms are supplied, and the test fee for 1997 is $6.25. The applicant must bring photo ID, any licenses/CSCE's that they have, as well as photocopies of same.

Talk-in is on the following repeaters (they are linked full time): 147.39+ PL 88.5 in Clayton, 442.400+ in Wendell, and 147.30+ PL 88.5 in Wilson. Further information can usually be obtained on the above repeaters, drop a note here, or call (919)554-2154 and ask for Dave.

The schedule for the remainder of 1997 is as follows: Apr. 19, May 17, June 21, July no test, Aug. 16, Sept. 20, Oct. 18, Nov. 15, and Dec. 20.

National Weather Service Cuts - A Threat to Public Safety?

You may have read or heard about the large budget shortfall the National Weather Service is facing. It has certainly made news here in the Seattle area. What you may not know is how proposed cuts will effect the NWS mission of protecting lives and property.

Take a look at a special edition of EComm News for more information and what you can do to help:

http://www.ci.seattle.wa.us/seattle/engr/ec9704a.htm

In this special report you can read about the details of these cuts and how the National Weather Service will react. You will also learn how to make your opinion known about this serious blow to the capability of the agency nationwide.

By the way, the Seattle Forecast Office is down 5 staff positions since the first of the year with data bouys and other infrastructure material in need of repair.

At the end of this posting you will find a list of e-mail addresses for Senators and U.S. Representatives from the Pacific Northwest. Let your elected officials know your feelings on this issue.

The men and women of the National Weather Service have been watching over this nation for more than 100 years. I think the citizens of this country can return the favor.

> Klint
>

Well I have rejumped 15 and checked non-continuity across 13. All seems OK. I have performed the MR + VFO powerup reset, then the UP + DOWN powerup. The first reset puts the unit back to 144-148 Tx and Rx, and 430-450 Tx and Rx (As we would expect). The UP + DOWN mod changes it to 420-500 Rx, but still only 420-450 Tx, and 130-174 Rx on the VHF side. I have made sure there is no power to the unit while doing the mods, ie remove both batteries, so it should have discharged fully. I am stuck from here. Anyone have any other ideas?

Thanks, Jason.

> Prove that the difference of two consecutive cubes
> is never divisible by 2.

Okay, that would be to say that (n+1)^3 - n^3 must be an odd number.
If n is even:

o Since 2 is a factor of n, 2 is also a factor of n^3,
i.e. n^3 is even.

o Since 2 is *not* a factor of n+1, 2 cannot be a factor
of (n+1)^3, i.e. (n+1)^3 is odd.

And conversely if n is odd, n^3 is odd and (n+1)^3 is even. The
difference between an even number and an odd number is always an
odd number.

So, do I win the Toyota?

[snip]
>For me, the issue is a base standard for the priviledge of using the amateur
>frequencies and emission types. One must pass certain minimum requirements.

Correct, but those requirements must be *relevant* to legitimate government
licensing concerns. Morse testing no longer meets that criteria. There is
no longer a need for amateurs to be able to intercommunicate by Morse with
stations in the life safety services so that the amateur can be told to
"bugger off" when he causes such stations interference. That was the original
and legitimate purpose of Morse testing for amateurs. But since the life
safety services (and in fact all other services but amateur) have ceased
use of Morse, that purpose no longer exists.

Standards are wonderful things, that's why there are so many of them.
But a standard in isolation has no purpose, it must have relevant
application to the task at hand to have meaning and purpose. Standards
do become obsolete over time. They are superceded by other standards.
That has happened to Morse in regard to government licensing. It is
past time that we recognized that fact and reformed the testing structure
to reflect it.

>As far as actually using the code, well some do and some don't. That's not the
>point. If we do not have minimum test standards, then we might as well do away
>with the amateur license all together and open the frequencies to everyone.
>
>Absolutely ANYONE can pass the code test IF they apply themselves. I know; I've

>learn the code, they don't (in my opinion) deserve the license.

In other words, you view it as hazing (since it isn't, by your own
admission, necessary knowledge). There is no place in government
regulation for hazing rituals. That's the province of private
fraternity initiations, not of government granted access to public
spectrum.

What is the *shape* of the SWR curve? If it is broad, you're seeing
loading from other structures in the immediate vicinity of the antenna.
If it dips very sharply at the frequency where you have it tuned, then
the problem is something else, probably a problem in the antenna's
matching network.

>before), general, advanced and extra (pretty much like today).
>
>Are all these different grades of licenses a product of "incentive
>licensing"? What was the point?

Ah, the story of all the baroque changes in amateur licensing is a
complex story.

In the beginning, there were no licenses, and virtually no selectivity
either. The airwaves were a howling mess with amateur, government, and
commercial stations all intermixed and engaged in power wars to see who
could dominate the spectrum. In 1912, the government imposed mandatory
licensing requirements on radio services, including amateur, in an
attempt to bring some order to the chaos.

There were two grades of amateur license, First Grade and Second Grade.
There were absolutely no differences in privileges between the two classes.
The First Grade had passed a test before the Radio Inspector while the
Second Grade had merely certified by mail that he was capable of passing
such a test but couldn't reasonably go to a testing point to be tested
by the Radio Inspector. (Radio Inspectors were based in port cities, so
operators far inland would have a difficult journey to make to reach a
testing location.)

The test consisted of a written exam on radio regulations, radio theory,
and a 5 WPM Morse test. Morse was the primary encoding method in that
era, and since there weren't well separated amateur bands, amateurs needed
to know it so that they could intercommunicate with the other radio services,
which had priority, so that they could be told to "bugger off" if they were
causing interference to critical communications.

Later, amateurs were restricted to the "useless" wavelengths shorter
than 200 meters so that they would cease interfering with "real"
communications. In 1923 a special amateur license was created, the
Amateur Extra First Grade, which was allowed operating privileges on
the valuable wavelengths below 200 meters. The requirements above that
of an ordinary First Grade license were 2 years in grade service and
passage of a 20 WPM Morse test, the by then standard commercial license
speed. This license wasn't popular, either with amateurs or with the

commercial services who thought that they had rid themselves of amateurs on this spectrum, and was discontinued in 1933.

In 1927, the Second Grade license was made 1 year non-renewable and amateurs all had to face the Radio Inspector to qualify for the First Grade license if they wanted to continue operating. By then there were more Radio Inspectors, distributed better across the continent, so the problem of travelling to an examination site was thought to have eased.

In 1932 the radio regulations were revised again. Amateur Extra First Grade licensees were granted exclusive radiotelephone privileges on HF and were redesignated Class A licensees (note that the LF privileges ceased the next year, as did the Amateur Extra First Class license). Amateur First Grade became Class B, and a new class called Class C was created for those taking examinations (proctored by volunteer amateur examiners) by mail (travel to examination sites had proven to still be too large a burden for amateurs distant from exam sites). With the demise of Amateur Extra First Grade in 1933, Class B operators were allowed to upgrade to Class A after one year in grade and passage of a test on radiotelephony operation (no 20 WPM Morse test was required).

All three remaining classes required a 10 WPM Morse test (the 20 WPM requirement ceased with the termination of the Amateur Extra First Grade license and cessation of operation on LF where that skill was useful for intercommunicating with commerical and government stations with which the spectrum was shared). In 1936, at ARRL request, the speed was raised to 13 WPM (according to the book _200 Meters and Down_, in order to reduce crowding by restricting amateur numbers through a more difficult Morse t est to no more than 16,000). This is the first instance of the Morse requirement being corrupted from its legitimate intercommunications purpose to an illegitimate purpose. (Significantly, current licensees were grandfathered, IE it was pure "I've got mine, *you* stay out.")

In 1951, the classes were renamed from A, B, and C to Advanced, General, and Conditional. All three classes had identical privileges. The Advanced class was discontinued (though current holders could renew it) in 1953 since it was functionally identical to General and Conditional.

Also in 1951, three new amateur classes were created, Extra, Technician, and Novice. Extra was like the old Amateur Extra First Class in that it required a 20 WPM Morse test, but it granted no privileges beyond those of General and was just an honorary thing, something for those who must chase wallpaper to aspire to. Tech was the VHF and up license, like today, except it didn't include 6m or 2m (part of 2m was added later). The written test was the same as General, but the Morse test was 5 WPM. Novice was a 1 year non-renewable license with a very simple written exam and 5 WPM Morse test. It gave Morse only privileges on special segments of some of the HF bands, and voice on a portion of the 2m band (later to also be given to Tech). Note that Tech had *no* HF privileges, even though the level of the exam passed was higher than for Novice. Both Tech and Novice exams were given by mail, administered by volunteer amateur proctors.

In 1968, Incentive (to pass faster Morse tests) Licensing was imposed (at the connivance of a cabal at ARRL HQ and A. Prose Walker of the FCC). That stripped General and Conditional licensees of a significant portion of their HF phone privileges, and required them to pass a 20 WPM Morse exam and become Extra class to gain them all back. At the same time, Advanced was reinstated as a halfway step between General and Extra in phone privileges.

Most amateurs were outraged by this action, and the phenomenal growth and technical innovation that had taken place in the era from 1951 to 1967 virtually stopped (this was the era of the rise of SSB and FM for amateur communications). A good number of amateurs went inactive, clubs were torn asunder as acrimony between the code whizzes and the ordinary amateur raged, most school radio clubs sponsored by those adult clubs disappeared (this was the primary source of new amateurs in the 1951 to 1967 period, and the primary reason for healthy amateur demographics during the period), most US amateur equipment manufacturers went out of business, and most amateur radio stores closed. And of course the percentage growth of the amateur service plummeted. This was disaster of the worst sort.

(There were other factors, the Vietnam War, a perceived rise in a sex, drugs, and rock and roll culture, and the rise of the Japanese amateur manufacturers are often given as confounding factors, though the latter only came *after* most US manufacturers had folded, and should be considered opportunistic response rather than a cause. It should also be noted that in the schools other semi-technical club structures, like photography clubs, did not suffer the fate of the school radio clubs. So the popular culture would seem to be *very peculiarly selective* if it were the real reason for the decline of the primary engine of amateur growth.)

In 1976, the Tech license was taken out from under the volunteer examiner system and prospective Techs were required to appear before an FCC examiner in order to obtain a license. Novice continued to be handled by volunteers. The Conditional class also ended at this time. Also in 1976, however, Techs were given access to all of 2m and to 6m. The requirement to certify that a licensee had actually operated Morse for a certain number of hours at or above his license class speed in the 12 months prior to renewal was removed (IMHO many amateurs had lied about this in the past anyway). The requirement that Novices use crystal control was removed, Novice 2m phone privileges were lost though. Amateur radio remained in the doldrums, and continued to grey.

In 1983, license terms were increased to 10 years from 5 for all classes but Novice. In 1987 Novice Enhancement was passed, making Novice renewable and giving phone privileges on 220 MHz and 1.2 GHz. Techs were given Novice HF privileges. Examinations were moved under a total volunteer system during this period. Still amateur demographics were grim.

Finally in 1991 the Morse testing requirement for Tech was abolished, and amateur growth and demographic trends took on a more healthy look. The average amateur age has declined by 8 years from its 1990 level.

About 20% of current licensees are now Techs, and about 40% of all current amateurs held the Tech license at one time in their amateur career. It has been an almost unalloyed Good Thing(tm) for the amateur service (the written is a bit too weak for the privileges granted, particularly in the areas of RF exposure safety, RFI, and general electrical safety matters, and that's something we should address). But it is only a half measure, and reform needs to go further, which is why the code testing debate continues.

>A few years earlier, in New Jersey, an FCC person "Dave P" discouraged
>my getting a tech license. "VHF is not REAL amateur radio". "HF
>is where the real ham operations are done". But I didn't want the
>code only license (movice). "All Code" guess you could call it.

Yeah, that was, and unfortunately still is, the image many inside and outside of amateur radio have of what constitutes a "real" radio amateur. It has become an embarrassing case of the tail wagging the dog. There is little wonder that amateur radio has lost the respect of industry, government, and the public. It is seen as dedicated to preserving at all costs anchronistic methods and practices in the face of modern communications trends. It has simply become irrelevant to its charter purposes. The seeds of that anachronism were sown in 1936 when Morse testing was first perverted to illegitimate purposes, and culminated in the debacle of 1968 whose bitter fruit we continue to reap.

There are three basic things wrong with the Incentive (to pass faster Morse tests) Licensing.

1) It incentivizes the wrong thing, IE Morse speed in an era when Morse has become obsolete and irrelevent to the legitimate purpose for which Morse testing was originally instituted, IE to permit intercommunications with stations using Morse in other services to which amateurs were causing interference.

2) There is no relevant linkage between materials learned and privileges granted, IE the privileges gained are snippets of HF spectrum where identical modes and power levels are used by licensees of three different classes. In other words, there is no technical reason an operator using 14.177 MHz should need to exhibit a different Morse speed than one operating on 14.300 MHz. Both licensees need the same knowledge to operate safely and without causing interference to other radio services (which Morse knowledge no longer addresses anyway).

3) And historically, it made the cardinal mistake of stripping from General licensees privileges which they had legitimately earned and enjoyed prior to the enactment of Incentive (to pass faster Morse tests) Licensing through no fault of their own, IE they were punished for committing no crime. That was the major cause of the ill will among amateurs of different classifications which tore amateur radio apart in the late

60s and early 70s, and all the consequences which flowed from
that down to this day.

Read 97.1. The amateur radio service has a federal charter. That
charter requires us to do several things, among them to push the
SOTA. Faster and better comms do that. It also charges us to self-
train to become skilled technicians and electronic experts, and
that doesn't mean for us to become expert in obsolete technologies
and techniques. Rather it means for us to become skilled in contemporary
techniques so that we can serve an augmentation role in time of national
need. (And don't make the mistake of thinking the learning can stop when
the license exam is passed, that's just when the learning is supposed to
start in earnest.) It also charges us to provide public service and
emergency communications, and we should equip ourselves to do that in
the most effective and efficient ways possible (which almost never means
OOK Morse anymore). And it charges us to contribute to international goodwill,
and that requires throughput if we are to do more than just contentless
gaming. In order to increase international understanding on a people
to people basis, we have to actually exchange thoughts and ideas with
people. UR 599 PSE QSL just doesn't cut it.

Note that neither cellular phones nor the internet serve any self-
training role in radio communications techniques. They may have
usurped some of our role as providers of emergency and public
serive communications. They may have usurped our role in providing
international goodwill contacts. But they have not usurped our
role in advancing the state of the art in radio communications

or our role in self-training to become skilled technicians and electronic experts. We can't (legally) mess with the innards of either the cellular network or the internet, but we can mess with the innards of amateur radios and amateur networks, we can learn how they function, and even improve their functions. That's why we're amateurs, and not just consumers of radio services.

>Annoyed with this constant bickering,

Annoyed with those who refuse to understand the underlying purposes of the amateur service and who wish to corrupt it into just being an idle passtime. It certainly can serve that purpose too, but that isn't what it is primarily about or why the government grants us so much valuable spectrum in which to play with radio technology. Amateur radio has its recreational aspects, it isn't intended to be a grim task which we have been assigned. But that isn't all that amateur radio is chartered to be. While we are enjoying ourselves, we are expected to be contributing to the charter goals as well. And that can be fascinating, challenging, and fun.

>at 1 watt, plus my 20 watt brick and a ground plane antenna.
>...before people tell my to fix the all-mode rig, it tasted
>an HF KW due to some bad wiring, and Kenwood won't touch it.

I wouldn't let Kenwood touch it anyway. But you're an amateur
radio operator, you're authorized to fix it yourself. Not only
will you save money (and get it fixed right rather than fighting
Kenwood's typically shoddy service), you might even learn something
in the process (fancy that, an amateur actually learning something
about his radio).

But that aside, mode B operation only requires a reception
capability on 2m, and you've got that. What you need is a
transmission capability on 70cm. There are two cheap ways
to get that, build a transverter to go with your HF rig,
or convert an old UHF commercial radio Tx strip. The latter
should cost under $50, and the former not much more than $100
(if you go with all new parts). Either way, you'll have cheap
access to the more capable satellites.

A couple of lengths of wooden 2x2 and some aluminum clothesline
wire for elements will give you a workable set of directional
antennas at virtually no cost. Hand rotation and low mounting
is perfectly satisfactory. Lack of money should be no impediment
to getting on the satellites. Only lack of determination can
stop you.

As to contributing to the Russian amateur satellite program, I
don't know of any way you can do that directly. Their activities
are under government sponsorship. You might check with the Russian
embassy about ways to send money to the Russian government earmarked
for that purpose. (I wouldn't just send cash to Box 88, that has a
way of disappearing in the mail.)

As I recall, International Morse is even included in the definition of
the modulation type - until very recently, ASCII RTTY was illegal,
although the use of ASCII instead of Murray (Baudot) isn't encryption
either.

American Morse uses long and extra long dashes and other odd things,
so it's hardly as simple as International Morse (formerly the
Continental Code).

Carl can speak for his own capabilities; but I will point out that some of the best engineers I have met have not completed a BS degree. They found jumping into real work more interesting than regurgitating facts at a professor's demand. Many times a degree means something, sometimes it doesn't.

I would also point out that the richest self-made man in the world, Bill Gates, never got his bachelor's degree. He dropped out in the excitement of helping to found the PC industry. I would say that his $15-20B proves that he didn't need whatever it was Harvard thought they could teach him. Many other programmers that built the PC software industry at both Microsoft and Apple did not have a degree either. They weren't teaching object-oriented GUI interface programming at most colleges in that time period - batch processing mainframes or timesharing minis were still the vogue at many. The best way to learn the new techniques was to get into a real project team that was delivering commercial software in 9 months.

>Good point, Roger.
>
>The "powers-that-be" who can change the rules are at FCC. They read
>petitions, not usenet. Your "input" posted here is never seen by anyone
>who qualifies as a "power".

That's not exactly true. Certain FCC officials do read usenet (as confirmed to me in unsolicted Email from one of them), and there are powers other than FCC officials who affect policy decisions. We know that some ARRL officials read usenet. It is known that some Congressional staffers read usenet. It is strongly rumored that members of the NSA read usenet. Though they admit nothing. :-) And certainly a number of those who form popular public opinion read usenet. That is a power which also is to be reckoned with in public policy matters. No policy decision occurs in a vacuum, though it is clear certain ARRL officials seek to squelch debate and would prefer a star chamber approach.

While we must guard against the idea that these discussion groups have a large influence on events, they are not totally without influence. People who matter do read them, or have someone read them for them and present a summary. (And everyone matters to one degree or another.)

Of course until WRC99 acts, petitions to the FCC would be ineffective because their hands are tied by the treaty, and such rash action can actually be counterproductive, since once the FCC visits an issue it tends to dismiss further petitions on the subject without comment other than to note that the issue has already been addressed.

Writing to the appropriate State Dept working groups preparing for WRC99, however, can be useful. Contacting Congressional staff can be useful, especially if you live in the district of members on the right committees. (I once changed the vote of the senior Senator of this state on an important issue by saying the right thing to the right staffer at the right time. It rarely pays to talk directly to your representative, he rarely understands the issue. What you have to do is to find the person on his staff responsible for that issue and convince *him* of your position. The rep will vote the way the staffer tells him to vote.)

And speaking up publicly always matters. Even one voice crying out in the wilderness can have an effect. Only those who remain silent have no impact. I am always suspicious of the motives of those who try to silence that voice.

Mario Desiderio (mandm@flashnet.it) wrote:

: I would very much to know how Japanese communicate their language using
: morse code. Knowing that they use Hiragana, Katakana and Kanji
: characetrs.

Other than the way that they are printed ... the Hiragana and Katakana phonetic alphabets are exactly the same (as far as the phonetic sounds are concerned). There is no distinction made when copying Japanese Morse code.

: Are their words all translated first in romanji and then sent as morse
: code ?

This can happen but is not necessary. It is easy to tell when a JA op is seeking a Japanese Morse QSO and/or is switching back and forth during the same QSO from Japanese to International Morse...

CQ JA Morse QSOs would be: -.-./--.-//-..---//
That dahdididahdahdah is the key.

In the middle of a QSO, if they switch from JA to Int'l CW ... they will send the same dah-didi-dahdahdah -..---

Somebody mentioned that the Japanese Morse code simply runs the letters together ... example: "HO" would be ....--- That is WRONG! DO NOT follow that example

A couple of things to consider:

1) Something >90% of Japanese when using the Japanese language on Personal computers/word processors will use Roman character ("Romaji") input rather than kana input. I believe it was IBM Japan that first quantified this in the later 1980s/early 1990s.

2) Less than 8% of ALL JA operator license holders have passed a Morse code test of any kind.

3) Less than 2% of ALL JA operator licensees hold the First Class license which, at least until not too long ago required BOTH International and Japanese Morse CW. However, I *think* that the Japanese Morse CW requirement *might*) not be required anymore. I am pretty certain that any JA who passes the USA/FCC Extra Class License can apply for a JA First Class license without taking the exams ... MEANING... that the Japanese Morse requirement would ... I guess me ... unnecessary.

But what do I know?

>was an opinion. It's a fact. Old timers just don't want to accept it.

Well, lets be careful here. A CRT is certainly a vacuum tube, and they certainly still serve a purpose. But in general you are correct. Most smaller vacuum tubes are no longer even produced, and larger power tubes are also disappearing. Modern commercial transmitters, even very high power ones, are all solid state, and receivers have been all solid state for a long time now. Amateurs have to use tubes imported from Russia or China to keep their tube equipment functioning. Even the CRT is on the way out as LCD screens continue to improve in quality and fall in cost.

We are moving into an era where solid state is completely dominant, where VLSI rules, and where digital techniques are supreme. In fact, outside amateur radio, the trend is even clearer because those making the decisions aren't ruled by sentimental dreams of the "old days" or by totally bogus ideas of real world capabilities. The three watchwords are reliability, capability, and cost. Solid state has dominated the first for decades now, has grown to lead even in power applications in the second area within the past decade, and is rapidly attacking the final area in those corners where it does not already cost less to go solid state, IE display technology.

The fate of Morse is even more clear. It was dropped by its original users, the wirelines, decades ago. It has now been discontinued by radio services other than amateur as well. It still hangs on as an anachronism in amateur radio due only to nostalgia or ignorance of better techniques or simply due to dog in the manger spite in the case of those insisting it remain a licensing requirement. Now there is nothing wrong with nostalgia, and ignorance can be cured, but the dogs in the manger need to have their butts kicked out of the way.

HUH??? I simply stated that the copy of the CB LICENSE I had carried the
above verbiage. What argumentt are you talking about??

> I pointed out that CB never
> had a test. It never did.

no one is disputing this point. You also "pointed" out that the FCC
never issued licenses for CB, only permits.

> Did the FCC give a "license" to CB
> STATIONS in the early days? Probably. It's a moot point since the
> FCC dropped any sort of station license/permit some time ago. It
> isn't relevant to this newsgroup.

AHH YES, Len Anderson, keeper of the newsgroup. If it isn't/wasn't relevant, why did YOU bring it up.

If you're going to stick your foot in your mouth, you should expect to bite down every now and then. Dont make statements that are inherently inaccurate and then when they are corrected, moan about relevancy of topics.

Get a grip Anderson.

Gary is correct. Any meteor (large or small) that survives entry through the atmosphere and hits the ground is a meteorite. If it survives entry it will surely hit the ground or something on the ground. Until it strikes something it's a meteor.

>interested, I'll describe it. A long antenna or aerial is attached
>to a resonant coil the other end of it is connected to an earth
>Copy Groom - Dallas, TX

Myron,
To actually understand completely the operation of a crystal radio, one would need to study calculus, complex math, electric circuits, electronics, physics, and a variety of electrical engineering disciplines. I thought I knew how a crystal radio worked before I started work on my EE degree! (still working on it). I won't pretend to know it all, since I don't, just ask my professors!
To add to Copy's thread, I thought I'd add a little (!) about the coil and capacitor combination. When the capacitor and inductor are in resonance, that is, at the frequency of 1000 Khz, lets say, the reactance ("AC resistance") of the capacitor and the inductor are equal. Now, a cool thing happens at this condition: the current in the

inductor-capacitor
circuit is at a maximum, hence a relatively high voltage is present accross the parallel LC combination.
(This was a really cool revelation to me one day when working on differential equation homework,
I had seen the light!) We take advantage of this condition by connecting a diode and headphones
to recover the transmitted signal from the radio station. Keep in mind that this circuit is not really
ideal. The LC circuit characteristics are altered drastically by many variables like antenna length
and ground connections. The LC quality factor (Network "Q" in EE-ease) is very Low, hence, as Copy
mentioned, one can hear many stations at the same time, regardless of the LC adjustments one makes
especially if there is a strong station in the vicinity.

I could go on and on, but I've already probably spoiled the "magic"! My first electronic kit was a
crystal radio, which I still have and occasionally hook up. I'm 30 now and built it 20 years
ago. I've studied may methods of communication, but I'm still fascinated by AM Radio. It has some
romance I can't quite put my finger on!

Good Luck!

Jim

Greetings,

I've found a couple of articles on creating your on pc boards, one uses a laser printer for the template.
Another describes how to use an aquarium for the etching process. The first can be found at

http://www.circumspect.com/seits

The second is an article posted on fidonet in the ham_tech echo a couple of years ago.
The web site should have the article I mentioned about using your laser printer, but if not email the president of Seits and ask about an email reprint. If no luck there, let me know.
If you can do uudecode, I'll pkzip the files and uuencode them, and send them along to you.

>or those that worried about DOB being published on amateur
>licenses, they should have been offered an opportunity to
>turn 'em in...

The real problem is that there is much damage someone unethical can do
armed with your date of birth, and a legal address. One could for example with
little diligence then look up someone's social security number, write to
social security, armed not only with a date of birth, but your Mother's
maiden name and all other data necessary to get a duplicate social security
card. A similar ploy could be used to obtain new credit cards, and possibly
damage one's credit history until corrected. Oh there is a wide variety of damage
that can be done with easy access to records that aren't normally widely
available. Even if someone knows approximately how old, the exact birth date
also for example allows one to request a duplicate birth certificate. Just
imagine someone with your social security number getting a duplicate driver's
license in another state, and then getting arrested for DUI or DWI. How long
would it take you to clear up your driving history and be allowed to drive again?
Would your auto insurance go up because of that little problem? Once,
the data being public would have meant that someone with the skills to research
might find out such data, now unfortunately, anyone with a desire to commit a
crime in your name can have the research tools necessary to do so. No, I
don't think that the folks who complained were being too concerned with
privacy. I also think that the FCC should have deleted such info when people
first began having wide access to the data, but such things don't always happen
when they should? I also ask, why are you interested in the exact day that
someone was born? What purpose does it serve for you to know that KZ0ZZZ
was born on 1/1/1901? -art clemons-

S(N>From: adell@mailhost2.planet.net (Steve (KF2TI-Landing, NJ))
S(N>Subject: Re: CW

S(N>In article <970410234004438@mogur.com>, len.anderson@mogur.com says...
S(N>> CBD>There was a point in time that CB required you to get a license from
S(N>>
S(N>> That NEVER happened. The only thing required in the first three
S(N>> years of the citizens band service was a PERMIT. Not a license, just
S(N>> a permit similar to permits issued to aircraft and pleasure boats
S(N>> that used radio.

S(N>Number 1, the posters says, "at a point in time", Len states never
S(N>happened, not in the 1st three years. Still, I beg to differ. I an
S(N>looking at a copy of my original CB LICENSE (KKA3722) issued June 1974
S(N>and states...

Citizens band started in 1958. The "callsigns" in Southern
California were "11Wnnnn" format at first, then the "Kxxnnnn" format
was adopted a few years later when the gaffe in callsign prefixes
were noticed during skip conditions.

If you wish to argue "license" versus "permit," fine, but do that
with a communications lawyer. I suggest Phil Kane.

As far as I'm concerned, CB never had a "license." There was never
any test. If you wish to call the permit a license, fine.

Note that the word "service" in radio service definitions is a
regulatory term and is so stated every once in a while in FCC
documents. That isn't some kind of equivalent to "military service"
where one takes a deadly serious oath, wears uniforms, learns to kill
people, and becomes subject to the UCMJ.

S(N>It uses such words as CB RADIO SERVICE STATEION LICENSE (SUBPART D)

All you want to do is argue here, about a radio service that is used
solely as a pejorative among amateurs. I pointed out that CB never
had a test. It never did. Did the FCC give a "license" to CB
STATIONS in the early days? Probably. It's a moot point since the
FCC dropped any sort of station license/permit some time ago. It
isn't relevant to this newsgroup.

12. NAB, Cable Operators Squabble over Digital TV after FCC Ruling
13. FCC Issues First National Digital Radio License
14. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
15. Weekly Propagation Forecast
-
Funding to defray our transmission and production expenses has been
provided by a grant from Chris Huber, N6ICW, of Sacramento,
California, where "This Week in Amateur Radio" is heard Saturdays at
6:00 PM on the N6ICW repeaters, on 147.195 MHz in Sacramento, and on
145.15 MHz in South Lake Tahoe, serving Sacramento, the San
Francisco Bay area, Tahoe, Reno, and Carson City.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
```

through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

If it's off by only 15 kHz, I wouldn't bother unless it becomes
confusing. No analog dials are "right on" frequency. That's why rigs
with analog need some means of calibrating the dial, usually with a built
in or outboard calibrator that generates a tone to zero beat on. I
wouldn't "slip the dial" though. You may find the method described in
the manual is easier than it sounds. Have fun on the air. 73

A.N.A.R.T.S. News Bulletin 953 06 APRIL 1997

COLS COLUMN

JOSEPH HENRY AND MICHAEL FARADAY CARRIED OUT VERY SIMILAR
EXPERIMENTS AT ALMOST THE SAME TIME, WITHOUT EITHER OF THEM KNOWING
OF THE OTHERS WORK. FARADAY KEPT RECORDS OF HIS WORK AND PUBLISHED
THE RESULTS AND WAS THEREFORE ACKNOWLEDGED AS THE DISCOVERER OF
ELECTROMAGNETIC INDUCTION. HENRY DESCRIBED HIS DISCOVERY OF THE SAME
PHENOMENA IN A PAPER DATED 1832.

HE DID NOT FULLY UNDERSTAND HIS DISCOVERY. HE DID HOWEVER TAKE NOTE
OF THE STRIKING EFFECTS WHICH HE LATER KNEW WERE DUE TO SELF
INDUCTION. AT THE END OF HIS PAPER HE SAYS 'I MAY HOWEVER MENTION
ONE FACT WHICH I HAVE NOT SEEN NOTED IN ANY WORK AND WHICH APPEARS
TO ME TO BELONG TO THE SAME CLASS OF PHENOMENA AS THOSE BEFORE
DESCRIBED. IT IS THIS : WHEN A SMALL BATTERY IS MODERATELY EXCITED
BY DILUTE ACID AND ITS POLES, WHICH MUST BE TERMINATED IN CUPS OF
MERCURY, ARE CONNECTED BY A COPPER WIRE NOT MORE THAN A FOOT IN
LENGTH, NO SPARK IS PERCEIVED WHEN THE CONNECTION IS EITHER MADE OR

BROKEN. BUT IF A WIRE THIRTY OR FORTY FEET LONG BE USED, INSTEAD OF THE SHORT WIRE, THOUGH NO SPARK WILL BE PERCEPTIBLE WHEN THE CONNECTION IS MADE, YET WHEN IT IS BROKEN BY DRAWING ONE END OF THE WIRE FROM THE CUP OF MERCURY, A VIVID SPARK IS PRODUCED....THE EFFECT SEEMS TO BE INCREASED BY COILING THE WIRE INTO A HELIX'.

THE 'VIVID SPARK' WAS THE SPARK THAT IS ALWAYS OBTAINED WHEN A HIGHLY INDUCTIVE CIRCUIT IS BROKEN. THE COLLAPSING FIELD CUTS THE TURNS OF WIRE, INDUCING A HIGH VOLTAGE IN THE WINDING WHICH ACTS IN SUCH A DIRECTION AS TO MAINTAIN THE CURRENT FOR A FRACTION OF A SECOND.

73S FOR NOW DE COL VK2CTD.

EA RTTY CONTEST 1997 RULES

Organized by "UNION DE RADIOAFICIONADOS ESPANOLES (U.R.E.)", the EA RTTY CONTEST was created to promote activity in RTTY mode and is open to radio amateurs world-wide.

DATE: l6OO Z Sat. to l6OO Z Sun., ApriI 5 - 6, 1997

MODE: RTTY-BAUDOT

BANDS: 10, 15, 20, 40 and 80 meters, according to IARU band plans.

CLASSES: a) Single operator all band.
b) Single operator single band
c) Multi operator all band only
d) SWL

CALL: "'CQ EA TEST"

MESSAGE: RST and CQ Zone.
EA Stations send RST and "PREFIJO PROVINCIAL".

POINTS: 10, 15 and 20 meters bands, one for contact within own continent, two for contact outside own continent. On 40 and 80 meters bands, three for contact within own continent, six for contact outside own continent.

Contacts between stations in the same DXCC country are valid for multiplier credit, but have zero point value.

Contacts between stations world-wide are valid.
It is not necessary to contact EA stations.

MULTIPLIERS: DXCC COUNTRIES and Spanish Provinces (PREFIJOS PROVINCIALES) on each band.)

** Note: The first QSO with an EA, EA6, EA8, EA9 station on each band, will count as two multipliers.
DXCC Country + Province.

CQ Zones DO NOT count as multipliers.

The Spanish "Prefijos Provinciales" are:

A-ALICANTE AB-ALBACETE AL-ALMERIA AV-AVILA B-BARCELONA
BA-BADAJOZ BI-BILBAO BU-BURGOS C-LA CORUNA CA-CADIZ
CC-CACERES CE-CEUTA CO-CORDOBA CR-CIUDAD REAL
CS-CASTELLON CU-CUENCA GC-G.CANARIA GI-GIRONA GR-GRANADA
GU-GUADALAJARA H-HUELVA HU-HUESCA J-JAEN L-LERIDA
LE-LEON LO-LOGRONO LU-LUGO M-MADRID MA-MALAGA
ML-MELILLA MU-MURCIA NA-NAVARRA O-OVIEDO OR-ORENSE
P-PALENCIA PM-PALMA de MALLORCA PO-PONTEVEDRA
S-SANTANDER SA-SALAMANCA SE-SEVILLA SG-SEGOVIA SO-SORIA
SS-SAN SEBASTIAN T-TARRAGONA TE-TERUEL TF-TENERIFE TO-TOLEDO
V-VALENCIA VA-VALLADOLID VI-VITORIA Z-ZARAGOZA ZA-ZAMORA

FINAL SCORE: Total points in all bands x total multipliers in all bands.

TROPHIES: Award and plate to winner in class A. Award to winners in class B), C) and D)

LOGS: Use separate log sheet for each band. Include a summary sheet showing the scoring and other essential information. Official log forms are recommended. Mailing deadline for all entries is May 10th 1997, to:
EA RTTY CONTEST MANAGER
ANTONIO ALCOLADO (EA1MV)
P.O.BOX 240
09400 ARANDA DE DUERO (BURGOS)
SPAIN.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(28 MARCH - 03 APRIL)

ISSUED ON 04 APRIL 1997

SUMMARY
Date 28 29 30 31 01 02 03
10cm 73 75 74 75 76 81 79
A 12 14 9 7 11 9 (10 ESTIMATED)
T 10 11 11 10 21 16 9

SOLAR ACTIVITY WAS VERY LOW 29TH TO 31ST MARCH, LOW ON 28TH AND 2ND TO 3RD APRIL, AND MODERATE ON 1ST. THERE WAS AN M1.9 FLARE AT 1348 UT ON 1ST.

GEOMAGNETIC ACTIVITY AT LEARMONTH W.A. WAS QUIET TO 1500 UT, THEN INCREASED TO ACTIVE TO MINOR STORM LEVELS ON 28TH MARCH; QUIET TO UNSETTLED 30TH, 31ST MARCH; 2ND AND 3RD APRIL; UNSETTLED TO ACTIVE 29TH MARCH AND 1ST APRIL.
FREQUENCIES WERE MOSTLY NEAR PREDICTED VALUES, WITH SLIGHTLY ENHANCED CONDITIONS AT TIMES ON 31ST MARCH AND 1ST APRIL, AND

WITH AN EARLY SLIGHTLY DEPRESSED PERIOD ON 3RD APRIL. SPREAD F
WAS PRESENT AT TIMES ON 29TH TO 31ST.

FORECAST (04 APRIL - 10 APRIL)

SOLAR: LOW TO VERY LOW.

GEOMAGNETIC: QUIET TO UNSETTLED.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES FOR LOW- AND MID-
LATITUDES AND UP TO 15 PER CENT DEPRESSIONS WITH
NIGHTTIME SPREAD F FOR HIGH-LATITUDES.

Hi,

Thanks for reading this message.
I would like to know if anyone has wrote any packet software that will work
with a
hand held PC and Windows CE.
If so, could you please tell me where I could get a copy of the software
and any comments that they might have on the software.
Also what the software will do.

Thanks for any help.

It has always been my understanding that American Morse code is legal on the ham bands, as long as the station *identifies* in International Morse. The same is true of codes used for other languages, providing that there is no "intent to obscure the meaning". Similarly, any language may be used for voice transmissions but a US ham station must identify in English. I've seen this interpretation in ARRL publications in years past, although I can't cite a current reference that specifically says anything about American Morse. Probably because there are so few people left who would use it anyway. 40 years ago it wasn't too hard to find an American Morse QSO on the ham bands. You just called "didit-dit dididahdit" for a while and someone would come back.

It might but the detector out is connected to the narrow FM detector.
You would need to change it to the 150 Khz wide FM detector or build
something that you could attach to the 6 Mhz wide IF out jack.

Vincent,

Before you rallye people to make "demands" of ESA, I would think that you would first be wise to "ASK" the AMSAT leadership if they want a "free building" from ESA?

Simply said, it is not for you or any AMSAT-NA member to make any demands on the European Space Agency. Nor is it proper for you to organize what amounts to a protest action against ESA.

Rather this is a policy decision that has to be made at the highest level of AMSAT leadership starting with AMSAT-DL. As you must know, AMSAT-DL is the organization that is the leader of the Phase IIID project.

You might consider sending your idea as a "formal presentation" to them through the proper chain of command via AMSAT-NA President Bill Tynan, W3XO (w3xo@amsat.org) to see if AMSAT-NA feels that such an idea should be pursued on an international level by AMSAT-DL.

Rob,
If you are talking about the Cactus Radio Network -- a group of
intertied UHF repeaters across the western part of the country, then
the simple answer is that its a "private" classification interlink and
not available to the general ham populice.

>
>Of course, we now have 2 dyslexics who have passed the 13 wpm code,
>don't we...and you told me it was sooo hard. Damn, I thought dyslexics
>couldn't learn it.

I never said that. The effort required for us was disporportionate to that required by others. That is one reason I take offense when people say "easy it is" but what ever. There are people who really cannot learn it for what ever reason and I am sympathetic towards them if you prefer to be hostile and lord your accomplishment over them I guess you can, I prefer not to. Just because I passed the test doest not mean that everyone else should be able to or should have to but that again is just my opinion.

You know Dale you read too much into things. I take an interest in how you are doing and you flame me. May I please go back in your kill file? Apparently my writing style is too obtuse for you, heck at times it is too obtuse for me.

Jerry

843. Montana RTTY Contact Needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-12 00:00:00 UTC
From: Vince Staffo <vinces@borg.com>
Message-ID: <334FB235.687E@borg.com>
Source record: 200621

I need a RTTY contact with a station in Montana to complete WAS-RTTY.
If any station in Montana would like to set up a schedule for a
RTTY contact with me, please contact me via E-Mail.

TNX,

Vince -WB2FYZ- Vinces@borg.com

Yesterday I visited the integration facility in Orlando and chatted
with Lou McFadin. During this delay the opportunity is being used to
improve the spacecraft. Things are being check and rechecked and
improvements made. Sure keeping that facility open costs money but we
are going to get a better satellite out of it.

We are going to a GTO for very small percentage of what that would normally cost and people then want ESA to give us more. I wish the original poster would give a little thought before launching out on his suggested course of action.

I heard one of the regular satellite ops comment the he, "wasn't going to pay to support a delay" I was stunned into silence (hard to believe) by that comment. The delay was not AMSATs choice. The same people who busted their tails to build P3D are doing the same during the delay to make it better while a bunch dweebs who did nothing want to sit around and bitch.

I know the interet is a great medium for shooting off your mouth but try thinking guys.

Jerry

845. commercial and personal ham pages

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-12 00:00:00 UTC
From: cdean@ham.nws.net
Message-ID: <334fc856.51945304@news.epix.net>
Source record: 200623

Hello all. I know a lot of the amatuer stores out there don't have
web pages, so I have put up a new site called http://www.repeater.net
so that these places have somewhere to put up a site. This also goes
for personal webpages as well. If you come to the site and read it,
you will see the pricing info. I must add also, that the first month
is free. If you feel like it isn't really helping you out, then after
1 month send me email to the address on the page, and we will cancel
you pages. THis is for all people looking for a site, but we would
like to get some more amatuer radio stores showing up on the internet.

again, the site is http://www.repeater.net

846. F.S. - Tubes, radios, books & much misc...

For sale only:

Pro-Audio recording gear:
British-made "ACES"-brand 24-track 2" recorder with remote, 15/30 ips with vari-speed, sold new for $19,000.00. Also ACES 32-input in-line mixer, 24 groups, 5-band switchable EQ, 5 sends per channel, extensive routing options, patchbay, etc., sold new for $13,500.00. All manuals, wiring harnesses, and lots of spare parts included. Both units are one-owner. I'll sell both for $10,000.00.

For sale or trade:

PATCH BAYS:
19" rack-mount patch-bays, with heavy-duty long-frame mil-spec Switchcraft/ADC 1/4" jacks. Front panel is black phenolic with designation strips, attached to a metal reinforcing frame. Jacks are switching type, and may be wired in a variety of ways such as normaled, semi-normaled, etc. They are wired to a "punch-block" which is mounted on the back of the frame, and connections may be made to the punch-block, or directly to the jacks. I have:
Quantity: 3 Number of jacks: 48 Approx. list price: $150.00
I sell these for $40.00
Quantity: 4 Number of jacks: 72 Approx. list price: $60.00
I sell these for $60.00
Quantity: 3 Number of jacks: 96 Approx. list price: $250.00
I sell these for $80.00

I also have:
POWER SUPPLIES
These are "Sola" brand 117VAC in, 15VDC out bi-polar power supplies, highly filtered and regulated, PC-board mount (but easily adapted), and were used in medical heart-monitoring equipment. You can find them listed in the Allied Electronics catalog. I have:
Quantity: 4 SOLA#84-15-2135 Rated at: 350MA
Allied price: $220.00
I'd like $20.00 each
Quantity: 7 SOLA#84-15-2120 Rated at: 200MA
Allied price: $154.00
I'd like $15.00 each

I also have 2 Tektronix Model 620 X-Y display monitors, with 10X12 cm screens, suitable for analog display data such as ultrasonic detection systems, volume & vibration analysis, auger probes, and biophysical systems as well as computer and data transmission systems. I don't know what they cost new, but they are real nice, and I'd let them go cheap.

Make an offer--I'll horse trade!!

Source record: 200626

I want to install a mobile rig for 2mtr/440 in a DIN radio slot. I know the space is available. What I need to know is how does this impact the rig. Will it have sufficient ventilation for sustained transmissions. Will it interfere with the standard AM/FM radio that will sit above it in another DIN sized slot? All answers are appreciated. Thanks you!

srm

No, they become meteorites when they hit the ground (and survive).

Source record: 200628

In article <333c2bc0.12824140@news.sprynet.com> lar01@sprynet.com (larry) writes:
>I realise that there are lots of amateur very concerned about the
>possibility of the dropping of the necessity of needing the morse code
>to operate below 30 mhz.
>I have been hearing the contriversay since the late 60's.

IE when Incentive (to pass faster Morse tests) Licensing was imposed.
That was the single largest self-inflicted wound the amateur service
has suffered in its history.

>Unfortunately, this 'debate' is having a serious negative effect on
>how non amateurs view our hobby. Many are now seeing us as a group
>more interested in debating the value of the morse code rather than
>the value of the future of amateur radio, as a whole.

The debate may be having a temporary negative effect, but Morse
testing, and the attitudes it symbolizes, have had a permanent and
much more substantial negative effect. That *is* why many of us are
participating in the debate, even though we've already jumped through
the hoops and stand to gain little or nothing personally.

>For example, more amateurs are agruing the cw merits than are trying
>to push this hobby forward. What percentage of amateurs, who are on 2
>meter fm voice, concerning adding another mode to their capability?
>The commercial concerns are licking their lips over our overconcern
>about the morse code and our, seemingly, lack of interest in our
>exploration of other modes to show the need and value to keeping our
>vhf, and higher, frequencies.

Active amateurs can, and do, do both, IE we can be experimenting with
new technology at the same time as we agitate for reform. But the two
issues are intertwined in several ways. Morse testing is only one symptom
of the larger problem. That problem is one of attitudes, and the way they
are embedded in current regulations, which inhibit experimentation and
progressive ideas which break the stranglehold of the current spectrum
warehousing mentality. These "I've got mine" and the "we've always done
it that way" attitudes stifles innovation and change which are vital if
the service is to maintain relevance and viability against outside
pressure on amateur spectrum.

>I realise that cw does have its merrits, I am not arguing that, but
>come on fellas, and ladies, lets get on with amateur radio
>development, and our future.

Indeed. Lets get the unnecessary barriers to progress out of the way
and get on with our charter tasks.

>p.s. I am against the dropping of cw for hf entry. It does have its
>place and the last several years of our progression has proven, to me,
>its importance.

OOK Morse retains a recreational utility for some amateurs, but dropping the Morse licensing test does not imply dropping the recreational use of Morse. The two are separate issues. The only Morse test which matters is the one you pass *on the air* when you make a Morse contact. Morse testing serves no compelling government licensing interest. Unlike the tests of regulatory knowledge or radio theory, knowledge of Morse does not imply that one will be equipped to maintain clean emissions or avoid interference to other services. Those are the primary concerns which licensing is supposed to address.

At one time, a Morse requirement was needed to ensure that amateurs could intercommunicate with stations in other services, primarily the life safety services, when the amateur was causing those stations interference. The critical service station would thus be able to tell the amateur to "bugger off". But those critical services no longer use Morse, so amateurs no longer need to know Morse so that they can be told to "bugger off". Those days are gone, and so should the Morse testing requirement be gone.

Its reason for existence is gone, and the Johnny Come Lately excuses raised by its adherents, such as its supposed purpose as a lid filter, are irrelevant to legitimate government licensing concerns, and are of very dubious validity in any event. They are merely dog in the manger obstacles to amateur progress. If the service has to go through a period of painful changes to accomplish reform, then so be it. It is for the long term good of the service to reorient it from a backward looking service to one which has its eyes firmly on the future of radio communications. We should always be thinking, "How can we do things better?" and not "How can we hold things back to the level of great grandpappy's day?"

[1026]

The following is a Q-S-T. Hams provide relief communications as the Red River goes on a rampage, the fight to abolish Morse Code testing moves to the World Wide Web and the price of a vanity call sign is about to go up. All this and more on Newsline report number 1026 coming your way right now.

*****

MINNESOTA - DAKOTA FLOODS

Ham radio operators in Western Minnesota and the Dakotas are providing essential emergency communications as rising waters along the Red River threaten towns along its banks. This following an unexpected spring snowstorm that knocked out public utilities, communications and closed many roads. The new storm comes on the heals of early thawing of previous snows that have already overpowered dikes and levies built to contain the winter run-off. Rain storms and high winds are also complicating relief efforts Dale Cary WD0AKO is Newsline Webmaster in Moorehead Minnesota. He says that hams have been active since the emergency began.

"They are helping to coordinate emergency crews between volunteer centers and helping to dispatch the Red Cross out to where they are needed. They have also been doing a lot of evacuating down in the Breckenridge Minnesota area. I believe that they helped evacuate a nursing home and another two hundred residents from their homes in the areas nearby to the rivers" (Cary)

Two of the most active clubs in the area are the Red River Radio Amateurs and the Three Rivers Amateur Radio Club. They and others are involved in the flood relief communications efforts. Dale Cary says that the worst is not over yet for the ham radio volunteers.

"Up in Grand Forks they are starting to prepare. A lot of dyking work has been done as well as a lot of sand-bag preparation. They are about 80 miles to the north of us so their river cresting will probably not be for another two weeks.
We also had a rain storm prior to the blizzard. With that came a lot of icing that took down a lot of telephone lines. And the local CBS affiliate lost a 2000' t-v tower just to the north-west of the Fargo-Moorehead area." (Cary)

The Red River is expected to crest in Moorehead at 38 1/2 feet. This is a full foot and a half higher than the previous record of 37 feet. To put this in perspective, a protective dike is being built around the Moorehead City Hall because it will flood when waters reach only 31 feet. As we go to air, ham radio emergency communicators remain on alert throughout the affected area.
(Via Newsline)

*****

NO-CODE FIGHT ON THE WWW

The fight to abolish mandatory Morse code testing has taken to the World Wide Web. This, with the creation of a new website dedicated to organizing widespread resistance to the continuation of Morse testing for any class of United States Amateur Radio license.
The website is called No Code International and its the creation of Bruce J. Perens, K6BP of El Cerrito, California. Perens describes his organization as a temporary grass roots organization. He says that its only objective is to remove the International Morse code requirement as a prerequisite to HF ham band operation.

"I feel that it is necessary to save Amateur Radio. I do not feel that we are going to survive if we are perceived by outsiders as a group of key-tappers. I think that the problem is that the ARRL has not educated amateurs about both sides of the question. And thats where No-Code International has to step in. I want to educate ARRL members and its leaders about the no-code issue and see if the next time the ARRL takes a poll if it might not come out differently." (Perens)

Bruce Perens works for Pixar Corporation. Pixer is a well known entertainment industry software and animation company that created the smash hit movie Toy Story. He says that its fair to say that No Code

International will not be disbanded until the code requirement is abolished for access by all radio amateurs to the high frequency bands.
If you are interested in learning what No Code International is all about take your computer over to their website. Its address is simple.
The URL is
http://www.nocode.org

FCC PROPOSES VANITY LICENSE FEE HIKE

The cost of a vanity ham radio call may soon go up. The FCC has proposed raising the fee for a vanity call sign from $30 to $50 for the 10-year license term. The fee increase was among those included for all FCC regulated services in a Notice of Proposed Rulemaking designated 97 dash 49.
Fee adjustments are an annual exercise for the FCC. The Agency says it must calculate its fees to recover the amount of regulatory fees that Congress has required it to collect in Fiscal Year 1997. The FCC says that the regulatory fees will recover the costs of enforcement, policy and rulemaking, international and user information activities for Fiscal Year 1997 which began last October 1.
The $5 figure per year is the lowest fee in the new schedule. The FCC says that it anticipates receiving 10,000 applications for vanity call signs in the 1997 Fiscal Year.
(Via FCC, ARRL)

*****

SESSION MANAGER UPDATE

There seems to be some confusion over our report last week of a decision by the FCC to not formally recognize Session Managers at ham radio examinations under the all volunteer testing session. We reported that the FCC turned this request down. Other news services indicate that it was approved. Both are correct to a degree. Heres what happened.
In its Report and Order, the FCC was very specific in stating that it will not formally recognize Session Managers. Also, that it continues to hold all three Volunteer Examiners equally responsible for proper conduct of all aspects of a given examination session.
The confusion comes from the wording of the FCC release. If you give it a cursory reading, it appears as if session managers have been approved. In reality what the FCC said was that it does not care about the mechanics of the test session. If a given V-E group wants to appoint one person as an unofficial Session Manager its fine with the agency. The even have changed the rules to permit it.
But there is a caveat. For its own purposes the FCC will not recognize transferring legal assignment to the Session Manager. If he or she makes a mistake, all three V-E's will still be called on the carpet. As far as the

FCC is concerned, all three V-E share in all aspects of legal responsibility in giving any ham radio tests.
(Via Newsline, FCC, others)

*****

FIRST SOLAR FLARE

Some good news for high frequency D-Xers and hopefully for the faltering ham radio supply industry. The National Oceanographic and Atmospheric Administration has confirmed the first Major Flare of the new solar cycle took place on April 3rd.
Because the region of the sun erupting is still off on the east limb about 20 degrees from center disc, it may not have as great an effect on earth's geomagnetic activity as it might have.
The ham radio supply industry has been waiting for sunspot activity to develop. The sale of desktop high frequency gear is at an all time low.
The industry hopes that improved D-X conditions will lead to increased sale of the more profitable desktop high frequency transceivers.
More D-X news later on in this newscast.
(Via various propagation forecasts)

HAM RADIO BUSINESS SLUMPING IN USA

As we just said, ham radio retail sales are not doing well in the United States. This, according to information culled from the annual reports of major Pacific Rim ham radio manufacturers and posted to the internet ham radio Newsgroups a few weeks ago.
A combined report says that industry wide gross revenues from North American operations are down an average of 20% from an all-time high of $470 million two years ago. Even worse, is that profit margins for retailers is down even further and that this is driving many smaller operations out of business.
The sales of equipment with the largest margin are desktop high frequency transceivers. With only one exception, sales of this class of equipment is reportedly very bad.
On the other side of the spectrum, sales of VHF equipment, especially budget priced 2 meter hand-helds in the under $200 range are way up. Unfortunately, these are small profit items. That means margins are down and pricing is cutthroat. This in turn has already lead to some of the weaker retailers closing their doors. Some observers believe it could also lead to some companies backing out of the North American market if this trend doesn't change.
More on this story, including alternatives some companies might consider if they leave ham radio merchandising in the United States on next week Newsline.

*****

GILFER SHORTWAVE OUT OF BUSINESS

Meantime, another longtime radio supplier appears to have gone out of business. The ARRL Letter reports that Gilfer Shortwave of Park Ridge, New Jersey, may be the latest casualty in the sagging radio hobby market. Gilfer had been in business for more than four decades. It billed itself as "America's Premier SWL Center." Although primarily a retailer for the SWL and scanner radio enthusiasts, Gilfer also sold some Amateur Radio equipment, accessories and books. But that was yesterday. Today, calls to Gilfer's telephones go unanswered, and the company site on the World Wide Web is now dark.
Less than three weeks ago Henry Radio in Los Angeles announced that after nearly seventy years that it was dropping retail sales of ham radio gear.
(Via ARRL Letter)

*****

FRYES JOINS KENWOOD

And an equipment manufacturer is taking a different road to stimulate sales. According to Kenwood Communications latest authorized dealer list, giant California computer mass merchandiser Fryes Electronics is the first non-traditional ham equipment outlet offering Kenwood amateur products. Fryes is home based in Santa Clara with store locations throughout California. Because of its vast supply of computer peripherals and parts, Fryes has become a a popular hangout for hams who build or upgrade their own systems.
Having Fryes now listed as a Kenwood retailer affirms an announcement made last year by Kenwood. The announcement that said that Kenwood was seeking non-traditional alternative outlets for their ham radio equipment.
(Via Kenwood Dealer List)

*****

ALINCO CUTS PRICES AGAIN

Meantime, for the second time in less than a year, Alinco has announced price reductions to dealers. The company cites the favorable dollar-yen exchange rate as one reason behind the price cuts.
But Alinco also says that it does not set prices at the consumer retail level. Because of this, over-the-counter prices can vary from one dealer to another.

W3ASK WINS NAB ENGINEERING AWARD

Congratulations to George Jacobs, W3ASK, on being selected as the winner of the 1997 National Association of Broadcasters Engineering Achievement Award. This for his work in the development and launching of the Voice of America and his modernization of the facilities of the Voice of Liberty radio stations.
W3ASK is the president of George Jacobs and Associates. This is an engineering consulting firm recognized world-wide for its contributions to shortwave broadcasting. He has also represented the United States at a number of international telecommunications conferences and has assisted in the establishment of several FCC licensed shortwave broadcast stations. Jacobs received the award at the NAB '97 Technology Luncheon on April 9th. In addition to his other professional activities W3ASK continues to research and write the monthly propagation report for CQ Magazine.

TOWER FALL SURVIVOR

If you ever need an example of beating the odds...this next story may help. Considering what happened the afternoon of March 26th, the fact that 25-year-old Joseph Holley is alive is amazing. Holley, who's a professional tower climber, was involved in a freak accident in central Alabama. It's the kind of mishap that--under almost any other circumstance--should have claimed his life.
From Newsline's Southeast Bureau in Birmingham...David Black, KB4KCH, brings us an astonishing story about a man who beat incredible odds:

From his hospital bed, Joseph Holley thinks back to the afternoon he was working 200 feet in the air on a cellular telephone tower south of Birmingham. Holley had just made sure that he was strapped securely to the tower leg.

"I checked my belt, checked my lanyard, made sure everything's secure. I released my hand from the tower, everything was fine. I stuck both hands into the pouches that hang off my workbelt to get to the hardware. The

pouches are about a foot deep and as soon as my hands hit the bottom of the pouches, which was probably a full 10 seconds from the time I snapped myself into place, the belt just let go. It just absolutely let go and I began to fall." (Holley)

Joseph Holley's life might well have ended at this point. But this story does not end tragically. Seconds after beginning to fall and thinking he's about to die, Holley blacks out. But as it turns out, the only tower leg that has any equipment attached to it below Holley is the leg he had been working on. After falling nearly 80 feet, Holley strikes a 6-foot mesh microwave dish in his ribs. The dish catches his body and keeps him from falling further.

"I hit it and of course was unconscious as I was falling, as I hit the dish, it woke me up. I hooked my leg over the dish and was very very disoriented" (Holley)

While hanging on to the dish, fear sets in as Holley realizes that he's still about a hundred-20 feet up. Having sustained severe internal injuries, he loses consciousness again. Co-workers climb up to Holley and secure him to the tower. Half an hour later, rescue workers from Columbiana and Southeast Shelby county arrive.

"They came up there and hooked the rope to me and pulled me down. This was the first time they had ever done anything like this and had absolutely no experience on a tower. You could tell the persons on the tower were a bit jumpy just being up that high. We were still between 120 and 140 feet." (Holley)

Despite his injuries, Holley is able to climb down with rescuers helping him. He's flown by Lifesaver helicopter to a Birmingham hospital. Exactly why Holley fell remains under investigation. He says he has always paid careful attention to the condition of his safety equipment. Amazingly, Holley's doctors tell him that he may not have any permanent injuries...and that after 2 weeks, he may get to go home. It's all leaving Holley very thankful.

"I'm really fortunate and I don't take anything for granted. I'm really lucky at the turnout of this thing." (Holley)

For now, Joseph Holley continues his recovery while dealing with something else--he's experiencing nightmares about falling. Will he go back to work climbing towers for a living? That is something this very lucky man says he wants to think about.

Holley says he wonders if a manufacturer's defect in his safety gear could be to blame for his near-death experience. Meanwhile, investigators continue looking at that equipment to try and find out exactly why it failed.

2 METER SSB NET

South Florida hams take note. There is now an SSB net that meets on Sunday at 8:30 local time on 144.230 MHz upper sideband. N5PIP in Pompano Beach is the net control For you grid square chasers. Thats Grid Square locator EL96
(Via Usenet)

*****

SHUTTLE SAREX HOME EARLY

The latest SAREX ham radio mission aboard the space shuttle Columbia came to an early end on Tuesday, April 8th. The mission was scheduled for sixteen days. It was cut short after only four when one of the three fuel cells that power the shuttle began to fail. While the Columbia can function properly on two fuel cells, NASA safety rules say that all three must be functioning or the shuttle has to land. Several scheduled school contacts were canceled as a result.
(Via AMSAT-NA BBS)

*****

MIR PROBLEMS

And it might be quite some time before you hear very much from the hams on board Russia's Mir space station. This is because ground controllers have ordered the crew to minimum activity status after the partial failure of yet another of the space stations oxygen generating systems.
Three weeks ago a fire on the Mir took out one of the back- ups.
Another system was reported overheating late on Thursday April 3rd and had to be shut down. A supply rocket with spare parts was launched toward Mir on Sunday the 6th but do not expect any live ham radio signals from the Mir crew until at least one of the systems is fixed. News reports say that could take several weeks to a month or more to accomplish.

DX

In D-X, JX7DFA, continues to be active on the lower bands from Jan Mayen. He is on almost every day working stateside stations during their evening hours. JX7DFA has promised to come on RTTY before he leaves the island. QSL to his home call. That call is LA7DFA.
Also the DX News Sheet reports that LA2GV was active from Bouvet Island, but only for three hours during the morning of February 22nd. He operated as 3Y2GV, on 18.090 MHz working Europe. QSL to home call.
And next years South Sandwich Island Antarctic DX Group operation will depart Cape Town January, 1998, on a 67 foot boat. The group will be active for 12 days. WA4JQS and ZS1FJ, are planning the operation which will cost at least a cool $100,000.
Also, the ARRL's DXCC Desk reports the number of unprocessed applications at the end of February 1997 was only 191.

BIOSPHERE 2 CELEBRATION

Closer to home, Sunday, April 20th is the day that amateur radio operators from Arizona, will join students and the general public to celebrate the Biosphere 2 Center Earth Day Special Event.
For those not familiar, Biosphere 2 is a unique combination of the largest functioning Earth systems model in the world linked with leading-edge technology for data collection and analysis. The on-air operation is being hosted on the front lawn of this human habitat where the former Biosphere volunteers lived.
The Radio Society of Tucson is coordinating the technical issues, including equipment and frequency assignments. Operation will be on 2 through 40 meters using various modes. For more information please contact the operations Technical Coordinator Bob O'Connell, KC5DWB, by e-mail to reo.azstarnet.com

DAYTON HAMVENTION - PART 2

And finally, its now only five weeks until the doors open on the 1997 Dayton Hamvention. In part two of our special series, General Chairman Dick Miller N8CBU tells Rains' Hap Holly, KC9RP, about this years schedule of forums:

"Well forums are one of the last things to get nailed down. The Forums Chairman Rich Huff has been working on this.
We will not be having to many of the forums over at Meadowdale High School. We did that last year and found out that did not work out very well as far as logistics.
What we are putting at Meadowdale this year are the so- called club meetings like Firebirds and Ten-Ten. They usually have a forum but its primarily for their people." (Miller)

Hamvention '97 takes place on May 16th, 17th and 18th at the Hara Arena in Dayton Ohio. For more information visit their website at

http://www.hamvention.org.

I think you will need to read a bit about the topic, calculate the link
margin, and find the times and frequencies for best results.

Your station might be good enough for an experienced operator to work
a "big gun" under just the right circumstances, but you won't have a
chance by trying randomly and without experience.

MODELS WANTED

I am looking for adventurous models.

I am an amateur photographer and videographer, I am looking for models that will do nude (artistic) poses for my portfolio (a copy of all photos will be supplied as payment).

I am also looking for females to do various outside photos, a sort of point and shoot in public places.

I am also open to new ideas for photographs

For the video side I am looking for lesbian, couples, groups and females using toys.

As I have mentioned before as I am an amateur I cannot afford to pay my models but a copy of all photos and videos will given if requested.

Please e-mail me with your
Name:

860. Kenwood TS-680S Will NOT TXmit

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-13 00:00:00 UTC
From: SteveL@fuse.net
Message-ID: <SteveL-1304971333450001@mekong-21.fuse.net>
Source record: 200435

I purchesed a Kenwood TS-680S (The twin of the TS-140S - only diff is 6 meter option) about 4 years ago. The radio has been changed to transmit on MARS/CAP frequencies (by removing a small diod by the main processor). The radio has allways worked fine with and with out the mod. However, a few days ago, it stoped transmitting. It still receves fine, but (I tried other microphones, and even tryed using the PACKET port on the back) it will not transmit. In fact, it will not even stop receving, and will not change freqs when in the split mode. I also tried reseting it, but that did not help ether.

PLEASE HELP!!!!
PS: I do not use News Grps offten, so if you could E-MAIL me and post it here, that would help verry much!

862. "Beacon Wizard" - Freeware

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-13 00:00:00 UTC
From: James Lee Tabor <ku5s@wtrt.net>
Message-ID: <335126A9.655D@wtrt.net>
Source record: 200437

Greetings,

I've developed a little app named "Beacon Wizard" that helps id
the new IARU/NCDXF beacons. I think the new system is really cool.

Beacon Wizard displays the following information:

o Active beacon
o Distance between your location and beacon
o SPath & LPath Azimith
o Local beacon time
o Sunrise/Sunset UTC time at beacon
o Users local UTC Sunrise/Sunset time
o Gray line flag between beacon and user

Beacon Wizard also has the following features:

o Run on Windows 3.1 and above
o User can edit beacon file to update as needed
o Bring up Windows clock from Beacon Wizard
o Info tip hot spots on display

The Beacon Wizard is freeware and available from my web page.

Thanks & 73,
Jim

Source record: 200445

Hi, Would you be interested in making thousands of dollars quickly and legally?

If your answer is YES, then take 5 minutes to read this article. It will change your life.

You can make up to or more than $50,000 dollars in 4-6 weeks, maybe sooner!

I'M NOT JOKING AND THIS IS ABSOLUTELY NOT A SCAM

The internet has grown tremendously and it continues to double in size every 4 months. Think about it: You see all those "make.money.fast" posts more and more often. That's just simply because it works!!

I was browsing around my newsgroups one morning and I stumbled across this article. Since I have this burning desire to make a lot of money and this headline caught my attention, I read it.

It said that you send $1.00 to each of the five(5) names on the list. You then place your own name and address stated in the article at the bottom of the list at the #5 position and post the article in at least 200 newsgroups {there are literally thousands of them, and this doesn't take as much work as you think}.

At first I thought, nobody's going to do this. And then I thought, what if they DO! Besides, what's five bucks anyway? I spend that on snacks a few times a week. Well, it's still hard to believe...but two weeks later I began receiving bucks in the mail! I mean a lot of money!!! It not only works for me, but it works extremely well for others as well. Mike Ochoa says he made #35,382 dollars in one month! Chanter made $42,000 in four weeks!!! Dave Manning made an incredible $53,664 dollars in four short weeks!!! And

Lars myers says he only made $21,000 dollars (ONLY!!?}

That's the article. Now do I know all these people? No. But when I read how they did it, it started to make a lot of sense to me. As a matter of fact, it made enough sense that I'm now taking a similar chance with $5 measley dollars of my own. Not a huge investment that I can't afford to lose, but one with incredible potential to deliver money to my mailbox!!! Can you imagine making $20,000 dollars or more for less than an hour,s work? What are you making now? All you ever have to spend is five bucks and postage for the envelopes. That's all Mike, Dave, Chanter and Lars did and look what happened to them: they made tens of thousands of dollars in a safe, legal and completely legitimate way.

Let me show you how and why this works now. Also, make sure you print a copy of this article so you get the information from it and START MAKING MONEY NOW!!! here goes:

Get 5 separate pieces of paper and write the following on each sheet of the paper...."PLEASE PUT ME ON YOUR MAILING LIST". Fold a US $1 bill inside each paper {wrap the bill with the paper so the bill will not be seen through the envelope. Otherwise nosy people, who like to steal envelopes with money in them will see the bill and swipe your profits! Put one paper inside an enveolope and seal it. Do the same for all five. You should now have 5 sealed

envelopes, each with a piece of paper and a US $1 bill stuffed inside of the paper. You're not just sending a dollar to someone;

you're actually paying for a legitimate service which is PERFECTLY LEGAL! Now, mail all 5 envelopes to the following 5 addresses:

1. J.H.
2430 Meadow Lane
Lakeland, FL
33801

2. E2AA
2862 Donnylane Blvd.
Columbus, OH

43234

3. B.K.
12 Chasemont Ct.
Baltimore, MD
21209

4. P.G.
PO Box 340286
Columbus, OH
43235

5. E.S.
11966 sw 91 Terr.
Miami, FL
33186

Step 2

Now remove the top name from the list that you see above and move the other names up (#5 becoming #4, #4 becoming #3, and so on) and put your name and address as the fifth on the list.

Step 3

Post/send the amended article (with your name at #5 in the list) to at least 200 newsgroups. This is the REALLY IMPORTANT part, so don't try to shortcut it. I'll explain more about this under the WHY it works part. (you can also send by irc or e-mail). Post/send as many newsgroups as possible. REMEMBER THIS!!!!! THE MORE GROUPS YOU SEND/POST to, the more people will see your article and send you cash. That's the real power of this business.

You are now in business for yourself, and you should start seeing returns within 7 to 14 days!!!

HOW TO POST THIS ARTICLE:

If you have Netscape 3.0 do EXACTLY the following:

1. Click on any newsgroups like normal, then click on 'TO NEWS' which is on the far left when you're in the newsgroups page.
This will bring up a box to type a message in.

2. Leave the newsgroup box like it is, just CHANGE the subject to

something flashy, such as "NEED CASH $$$ READ HERE $$$" OR "FAST CASH"!!

3. Tab once and you should be ready to post. Cut and paste this article exactly as it appears,except to insert your name at #5, and to remove #1 off the list, plus any other small changes that you might think you need to make. Keep most of it the same though. You don't want to change it too much--it's proven to work just as it is written!

4. When you're done typing the WHOLE article,click on FILE IN THIS BOX, RIGHT ABOVE SEND, NOW WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click and SAVE AS when you're under FILE. Save your article as a text file to your C: or A; drive. DO NOT SEND YOUR ARTICLE UNTIL YOU DO THIS. Once saved move on to number 5 below.

5. If you still have all of your text, send or post to this newsgroup now by clicking send, which is right below FILE, and right above Cc:

6. Here's where you're going to post all 200. OK, click on any news group then click on "TO NEWS", again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHEMENTS. You will get another box to come up. Click on ATTACHED FILE, and then find your file that you have saved earlier; click once on the file, and then click OPEN. NOW CLICK ON OK; if you did this right, you should be able to see your name in the attachements box and it will be shaded green.

7. That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you only have 199 more to go!!! (don't worry, each one takes about 30 seconds once you get used to it}

REMEMBER 200 IS THE MINIMUM.

You are now in the mail order business and will start receiving your #1 envelopes from various people all over the world within days.HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE! Incredibly simple, isn't it?

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!!!

Out of every 200 postings, let's say I only receive 5 replies, which is VERY LOW. So I made $5 with my name at #5. I've already made my money back!

Now then, each person who just sent me $1 makes 200 postings, now with your name at #4,

WHICH IS A TOTAL OF 1000 postings, not including your own. Say 50 people send you $1 now, which again, is a very low response rate; that's $50 you made!

Now then, your 50 new agents post 200 listings each with YOUR NAME AT NUMBER #3,

or 10,000 postings (25 x 200). That's just how the system works at its worst case. However, the average return is 500 responses at $1 each. That's $500 in your pocket!! Each of your new agents makes 200 postings, which is 5,000 returns at $1 each, which is

$5,000 dollars!! And finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1, YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST, AND THAT.S IF EVERYONE MAKES 200 POSTINGS ONLY, AND WITH ONLY A 5 PERSON RESPOND!!!!!

When your name is no longer in the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $1 TO 5 people in the list, putting your name at #5 again. And start posting again. The thing to realize is that thousands of people

all over the world are joining the internet and reading these articles everyday, just like you are right now!!! So, can you afford $5 dollars and see if it really works? Estimates are at 20,000 to 50,000 new users everyday.

REMEMBER: WORK THIS FAIRLY AND HONESTLY AND IT WILL WORK! THE BASIC IDEA IS FOR EVERYONE TO MAKE MONEY. GOOD

LUCK TO ALL WHO

PARTICIPATE, AND PLEASE, PLAY FAIRLY AND YOU WILL BE REWARDED!

DON'T put this off!! It's SOOOO EASY and SIMPLE, so do it RIGHT NOW

You won't be sorry!

*You may also want to get some bulk e-mail software to help the process along even faster.

P.S. If you try to deceive people by posting the messages with your name in the list and not sending the $5 to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months.) Then he sent the 5 bills and was added to their lists. In 4 - 5 weeks, he had in excess of $10,000.

It looks as if our resident knocker is at it again, though April 1 was
two weeks ago!

However the concept of auctioning one and two letter amateur callsigns to
the highest bidder (rather than through a lottery system) has
attractions. Here in Australia we floated the idea (tongue in cheek)
that those with two letter callsigns should give them up and have their
callsign re-allocated to the highest bidder at a public auction attended
by all amateurs (on April 1, 1996). That created quite a stir, because
most amateurs want a callsign that's either very close to their initials
or very short. I suspect that a proposal to auction attractive callsigns
would raise even more controversy than one to auction some of our bands.

Hello,

I have applied for a reciprocal license in the U.K. and would like to take my h.t (designed for the U.S.). Do all repeaters in the U.K. require the 1750 hz tone? I've heard that many are now using CTCSS but I don't know if this is in addition to the 1750 hz burst or in place of it.

Thanks for all replys,

Rick/N3BUT

Windows CE is an embedded operating system. (similar to the
OS/9's and the vxworks of the world) It's first application is
the Handheld PC's. It is also going to appear in settop boxes, smart
phones, ect. It is not "PC centric" in that it runs on RISC
processors, currently, although it will be running on embedded x86
CPUs in the future (not PC look alikes), as well as a couple of other
RISC CPUs. It is not Windows 95, or Windows NT. It is a completely
new kerenl with the WIN32 API. pretty powerful, since there is alot
of WIN32 developers out there.

Anyway, to answer the first person asking the question: I am currently
working on a packet program for Windows CE in my spare time. To
distribute it, I need to get permission of my employer, since we do
Windows CE development as a business, and
I have to make sure there isn't licensing, Intellectual Property

conflicts, ect. I should have something done by June. The reason is that I spend 14 hours a day doing this stuff for commercial reasons. You get pretty tired after that. I could convince my employer that it could be a product, but then the ham community would have to pay. I'd rather make it shareware/freeware.

I'll let you know how it goes.

Been considering this issue for a long time... I think the time is coming where an amateur may request that the address NOT be given out to the CallBook, QRZ, Buckmaster, etc. Consider a single female, living alone - she has a right (as does everyone, for that matter) to an unlisted or unpublished phone number or a listing with a truncated (or no) address. Her privacy could be compromised by such a listing in the FCC database. On the other hand, FCC licenses are a matter of public record. I suppose you could take the tack that by applying for the license, you abbrogate your right to privacy. But then again, why should one have to?

It is an interesting argument on both sides... And I think the deletion of the DOB data is just the first battle...

Mark your calendars! The Eastern New York Section Convention, combined with the spring hamfest of the Mt Beacon Amateur Radio Club, has been scheduled for Sunday, April 27, 8:00 AM to 2:00 PM, at John Jay High School in Fishkill, Dutchess County. Clubs and Public Service will be the focal points of this year's event.

Ongoing forums throughout the day will include SKYWARN weather spotters' training, packet traffic handling, and an FCC license examination session. Scheduled forums will include presentations on the Official Observer program, publicizing club activities, SAREX, the RPI W2SZ/1 Mt Greylock VHF/UHF contest team, amateurs and local government, ARES and RACES activities, on-air bulletins, new ham forum, and an ARRL Forum with Hudson Division Director Frank Fallon, N2FF, division staff, and representatives from ARRL Headquarters in Newington. A "Battle of the Vans" is also scheduled, with outdoor displays of mobile emergency communications vehicles.

Admission is $5.00 (spouses and kids are FREE). Tables are $8.00 in advance, $10.00 at the gate. Tailgating spots (with your own table) are $6.00 each. Talk-in will be offered on the 147.97 (-600 kHz) Mt Beacon repeater. For additional information, contact Ken Akasofu, KL7JCQ, via internet email at ken.akasofu@bbs.mhv.net or by landline at 914.485.9617.

In a previous message on this subject I gave
an incorrect e-mail address.

My e-mail address is "K0HB@usa.net" (without the
quotation marks).

Still looking for the article. The two hams
who invented it claimed 90% efficiency which
would be really helpful in a remote power
constrained digital application I am contemplating.

If anyone knows about this "Class E" amp, please
direct me toward the article. (I believe it was
in QST or one of the IEEE journals a couple of
years ago.)

Can anyone help me find a Clarifier mod for this radio. I recently purchased it for a very good price thinking I would use it as a 10 meter mobile and it seem to work fine with the excwption that the clarifier works only on receive of course. I would like to tie it to the transmitter part of the rig so that when moved the receiver and transmitter moved together.
I realize this is not really a "ham radio", but I do have it and would like to make the most of it on ten meteres Hi!
Any help will be much appreciared...Thanks..
Please send private email as I seldom have time to read the news reflectors...

Dangerous? Did you even bother to look at the radio's schematic?

If a user opens the case to a radio with the intent of performing an out-of-band modification, then any damage incured is of no concern to me. I'd be happy to see the radio self-destruct.

I only wish the manufacturers would make it impossible for successful OOB mods to be completed.

(No one should work on a radio at all without first studying the schematic thoroughly to determine the operation of each and every component.)

Stephan M. Anderman (sanderman@delphi.com) wrote:
: Been considering this issue for a long time... I think the time is coming
: where an amateur may request that the address NOT be given out to the CallBook,
: QRZ, Buckmaster, etc. Consider a single female, living alone - she has a right
: (as does everyone, for that matter) to an unlisted or unpublished phone number
: or a listing with a truncated (or no) address. Her privacy could be
: compromised by such a listing in the FCC database. On the other hand, FCC
: licenses are a matter of public record. I suppose you could take the tack
: that by applying for the license, you abbrogate your right to privacy. But
: then again, why should one have to?

On the address issue, a good (although involving expense) solution
has been mentioned
here before: get a post office box, and change the mailing address
to the P.O. box.

This satisfies the regulation that hams maintain an address where they
can receive mail sent by the FCC. Works for QSL cards, as well.

It would be a real shame if it came to omitting some addresses from the
FCC records, and thus from the Callbook, callbook CD-ROMs and the online
servers. The old phrase "I'm good in the Callbook" might not be heard as
often on the air.

Seriously, I don't think that anyone who has raised the issue of privacy
is being overly paranoid. You'd be surprised what some government agencies
consider to be "public" information. For instance, our local Cal State
campus, and presumably the entire Cal State system, considers such
information as DOB, address, home telephone number (even if unlisted) as
public information, and will release same unless the student files a written
objection *each quarter or semester of attendance*.

Here in California, anyone used to be able to a complete listing of vehicle
registrations from the DMV. It wasn't until it came under public scrutiny
that crimes were being committed against unknowing citizens, that the sales
were stopped.

From: elewis@dsp.com
Message-ID: <3351673b.378124@news.wco.com>
Source record: 200457

I was wondering how close to the bottom of the band I can operate in usb. Today I heard many advanced operators on 21225 which is the break between advanced and extra. Is it proper to operate this close to the extra portion of the band in usb.

Apparently in some cases it does. There is hope though. A number of us have passed the code and still think stand alone code testing should be done away with. Before you heros tell me to just shut up and learn the code please check a current call book. Thank you.

HI Carl, I dont know or care what your license class is, but coming down
on a non-ham like that is entirely uncalled for !!! first off, He was
just asking questions... wanting answers, not the sarcasm you responded
with, you may have a #6 call, but your probably from N.Y.City...
no need to respond to this message !! this is the end of this
conversation, Tom

It's hard to find anyone if they are using their post office box number
on the 610 form. I suspect the reason for dropping the date of birth was
related to the vanity call issue. Too many wanabes cruising the
neigborhood of some geriatric ham, waiting for his last breath.

Federally funded. (H-3 isn't open just yet; but it has to be the biggest federal pork we've received in a long time - it was built to connect Kaneohe Marine Base with the Navy's Pearl Harbor.)

Keep your Mainland dollars flowing over to here, folks!! Your taxes just got us a new building on campus (the Pacific Ocean Science and Technology building).

1997 DX CONVENTION ANNOUNCEMENTS....
The 6th Annual New Orleans International DX Convention will be held August 22-23rd. The Convention is held at the Royal Sonesta Hotel in the French Quarter - rated one of the top ten in the U.S. by Conde Nast Travel magazine. There is a special NO International DX Convention rate; to get it, you should call for reservations and ask for it using the local number (504) 586-0300. The program will be finalized/published in the next few weeks. Early registration is reported to be: Registration and Banquet $60 or Guest tickets for the banquet only $40 (Registration at the door will be $66 and $44 respectively). For early registrations contact Michael Mayer, W5ZPA, 5836 Marcia Avenue, New Orleans, LA 70124, fax: (504) 524-2129

The Lynx DX Group Convention will be held May 1-4th, in Oporto, Portugal, with guest speakers EA8AK, ON5NT (VK0IR) and DF6FK (T31BB). Contact Antonio, CT1BH, or Tony, EA5BY, (agaliana@alc.es) for more information.

NW DX Convention by the BCDXC & Fraser Valley DXC will take place July 25-27th, at the Richmond Inn (7551 Westminster Highway, Richmond, B.C., Canada V6X 1A3 - Phone: (604) 273-7878, Fax (604) 278-0188).
For more information please contact:
Allan/VE7SZ via E-Mail: abucksho@direct.ca
Ken/VE7BXG at PO Box 3048, Blaine, Wa, USA 98231

9X, RWANDA. By the time you read this, Mark, ON4WW, should be back in Kigali. He hopes to obtain permission to operate on new frequencies

(40/80 instead of 20/160m) or even a full license. Mark was active as 9X4WW last time.

A7, Qatar. The "BARTG News" reports Jean, J28JJ, is now active on RTTY from the QARS club station as A71A. He usually can be found on Saturday. QSL via QARS Radio Club, GM 222122, Doha, Qatar.

BIOSPHERE 2 OPERATION. On April 20th, Amateur Radio Operators from the Tucson area will host a special event station at the Biosphere 2 Center in Oracle, AZ. This event will kick off Earth Week Activities at the Biosphere. The activities will include a science fair for school age children along with no admission charges on April 20th, 1997. This is the first time this type of event involving amateur radio has ever been attempted at the Biosphere 2 Center. The Special Event Station will operate with the cooperation of the Southern Arizona DX Association, the Radio Society of Tucson, the Tucson Repeater Association and the Old Pueblo Radio Club. This event will be operating under the club call sign of K7RST from 1300z April 20th to 0000z on the 21st. The following frequencies will be used: SSB - 50130, 28405, 21238, 14238 and 7245 kHz; CW - 21138 (novice), 7117.5 (novice); and FM - 147.140 MHz. A beautiful commemorative certificate will be available. Please QSL with a 9 x 12 SASE to K0DVH (ex-KC7NCB) with signal reports and contact number on your QSL. For more information about the Biosphere 2 Center and Columbia University, (who presently manages the Center) check out the web page at http://www.bio2.edu Other questions can be directed to Dave Kalahar - KD4HXT, SADXA Chairman, at: cool-fm@theriver.com

CY9, ST. PAUL ISLAND. Mike VE9AA, states the CY9AA operation by K7BV, VE1PZ, and himself will now be from June 26th to July 3rd.

EK, ARMENIA. EK6OCM states to look for him to be active on 20 meters RTTY. QSL PSE via K6EID.

FR/J, JUAN DE NOVA. The "59(9) DXReport" states FR5KH/J and FR5FT/J are reportedly active for "50 days from March 21". QSL via F6FNU.

IOTA/USI NEWS......
Clay County DX Assocication of North Florida (N4GZ) will be active from St. George Island (NA-085 and USI FL-007S) April 24-27. The club will be on all bands, both CW and SSB. Please QSL via bureau or direct with SASE to: CCDXA - N4GZ, 3331 Wilderness Circle, Middleburg, FL. 32068-4129.

Tony/WF1N and Lou/KA1DIG will be on Pot Island (The Thimbles, NA-136) April 25-27th. Activity will be SSB on 20 and 40 meters (they will listen down on 40 for DX and up for USA). QSL via home calls (SASE, PSE), via the bureau or EQSL for U.S. Islands. This will be a new island for USI.

OOOOPPPSS DEPARTMENT. Thanks to Rolf, XV7SW, in pointing out the name for XV7TH in OPDX.299 was listed wrong. The name of XV7TH is Torsten, not Rolf.

PIRATE ALERT! Nodir, EY8MM, Vice President of the Tajik Amateur Radio League, reports a station, EY4AA/6, was active on 80 meters the past few weeks. He states there is no license issued for this callsign and possibly this operation is taking place from Krasnodar, Russia (UA6A).

QSL INFO AND UPDATE....
Chuck, K7PT, has informed OPDX that he is now the QSL Manager for 5V7MD. QSLs can be sent to: Chuck Degard, 919 W. Vaughn St., Tempe, Az 85283.

Charlie, W0YG, states to start looking for the V5/ZS6YG cards in the mail. ALL Stateside cards received to date either went into the mail April 10th or 11th. Overseas cards should have gone out during the past weekend.

SPECIAL EVENT STATION. In the middle of this month through the 12th of October, the club station EA2URD will be active with the special callsign EG97CMC to celebrate the "1997 World Cycling Championships of Road" in San Sebastian (October 8-12th). They will operate on all bands and modes with a special emphasis in the CQWW WPX CW Contest (May 24-25th). QSL direct to: EA2URD, P.O. Box 1198, 20.080 San Sebastian, Spain or via the bureau. For more information send Jose, EA2CLU, an E-mail message to: ea2clu@ctv.es. Also check the WEB page: http://www.donsnsn.es/mundial97/

SPECIAL EVENT STATION. Celebrating the 50th Anniversary of the Coast Guard Air Station on Kodiak Island (Alaska), look for KL7HKX (U.S. Coast Guard Amateur Radio Club) to be active for the entire month of April. Look for the operators to be active on 20 meters (14240-14280 kHz). A contact will get you a Special Event QSL card via the callbook address or via the bureau. For more more information contact John/NL7WA at roger@ptialaska.net

SPECIAL GET WELL SOON goes out to Bernie, W3UR, Editor of "The Daily DX", who was admitted to the hospital late in the evening on Wednesday, April 9th, in an emergency situation with acute appendicitis.

SPECIAL REQUEST. Dave, K7JJ, an ex-operator of HZ1AB (1954 & 1977-86), has asked OPDX for help in finding out the actual start date of the HZ1AB station. Present and former operators are attempting to determine if this is the anniversary year for the callsign. Records have been "misplaced" over the years with all the moves the station has made around Dhahran Airport. They think it was 1947 (maybe '46). They are looking for a confirmed contact in the form of an early QSL card received by anyone 50 years or more ago. They can contact Dave with details via E-mail at: k7jj@ix.netcom.com. Dave also has a WEB site at: http://www.netcom.com/~k7jj/hz1ab.html

SV9, CRETE. Bert, PA3GIO, will be active from here April 28-May 5th. Operations will be on 20-10 meters SSB plus WARC bands and maybe 40/80 meters. His callsigns will be SV9/PA3GIO/P and SV9/PA3GIO/M.

T97, BOSNIA-HERZEGOVINA. You still have a few days to work this one. The ARABiH Headquarters states that in the honor of Pope John Paul II's visit to Bosnia-Herzegovina, the members of ARABiH will operate under

the special callsign T97POPE. Activity will be on all HF bands 160-10 meters now through April 15th. Special QSL card can be requested via the bureau or direct to : T97POPE, P.O. Box 61, 71000 Sarajevo, Bosnia-Herzegovina.

W1AA/IMD (Marconi Radio Club Station). Look for this station on April 19th. It represents the Marconi Station CC on Cape Cod where the "First Two Way Transatlantic Radio Spark Transmission" took place in 1903 between the USA and Europe. QSL via W1AA: Marconi Radio Club, R.J. Doberty, P.O. Box 1193, Lakeville, MA 02347-1193.

10TH INTERNATIONAL MARCONI DAY. This event is organized by "The Cornish Radio Amateur Club" and will take place next weekend on April 19th. The activities will run a full 24 hours from 0000 to 2300z and will take place on all HF bands with all modes of communication encouraged. There will be the usual number of high profile official participating groups representing former Marconi operating locations. A certificate is available for contacting these groups (seven different categories available). Here are some of the stations that will be active:

CT1TGM - Coimbra, Portugal DA0IMD - Borkum Island
EI2IMD - Crookhaven, Eire EI3MFT - Letterfrack
EI3IMD - Dublin Bay EI4IMD - Clifden Galway
EI4JAM - Dublin EI5IMD - Crookhaven Site
EI6YXQ - Ballybunnion GB0MAR - Puckpool Iow
ED7IMD - Cadiz.s Spain GB1IMD - Leicester
GB0IMD - Alum Bay I.O.W. GB2MID - Sandbanks Poole
GX0MWT - Chelmsford GB4IMD - Truro
GB2GM - Poldhu Cove GM4MD - Old Carnarfon STN
GB2MDI - Pepperbox Hill GB4MPC - Cullercoates
GB2SFL - S. Foreland L'house GB5MD - Flatholm/Lavernock
GB4JAM - Isle of Wight GB2MD - RSGB Potters Bar
GB4MDI - Lavernock Point GB?MD - Break Down Site
IY0GA - Sardina Island IY0TCI - Civitavecchia
IY0ORP - Rocca Di Pappa, Rome IY4FGM - Pontechio
IY1TTM - Sestri Levante W1AA/IMD - Cape Cod Mass.
IY1MR - Rapallo, Genova OE1M - Vienna
WB6TMY/IMD - Marshall, CA PR1MD - Rio de Janeiro
PQ1MD - Rio de Janeiro PT1MD - Rio de Janeiro
PS1MD - Rio de Janeiro PV1MD - Rio de Janeiro
PU1MD - Rio de Janeiro PX1MD - Rio de Janeiro
PW1MD - Rio de Janeiro NW2P - Somerville, N.J.

ZK1, NORTH COOK ISLANDS. The Date Line DX Association is in the final planning stages of an operation to North Cook scheduled for September 20-27th. This operation will have the same goals of its last operation, AL7EL/KH9 Wake Island, that being priority to low bands and East Coast North America and EU. North Cook is currently ranked number 85 in the recent ARRL DXCC Most Wanted 100 and is ranked in the mid 20s for Europe. Three radios will be operational with one of those radios specifically for RTTY where it is ranked number 46 overall on RTTY. Numerous sponsors are providing equipment. Current operators are N7RO, N4RF (ex-AB4AE), WA4YBV, KI6AN and K8XP (ex-AL7EL). They are solicitating for an additional operator, specifically someone who is a Medical Doctor or one with equal professional qualifications. Anyone interested can contact Tom, K8XP, at: K4TSJ@juno.com

ZV, BRAZIL. Look for ZV3A to be active from the Brazilian Tramandai Lighthouse (good for the Brazilian Lighthouse Award (DFB): RS-04) from April 25-27th. Operations will be on SSB 40-20 meters (Also check the Brazil DX Net). QSL via PY3AAC: A.V.Christensen - Rua Ir. Jose Otao 170/1302, 90035-060, P.Alegre/RS/Brazil, or via the bureau.

I'd suggest a PO Box for people that have a privacy concern. This is 1997,
forget about any really effective way of protecting your privacy. It's a
pipe dream. In a perfect world things would be different. I don't see the
amateur radio license database as one of the major threats to our privacy.
Just think for a minute who has access to where you live, start with the
utility companies and take it from there.

>means something, sometimes it doesn't.

The 4-year engineering curriculum (5-years at many universities) has been created by accredited engineers for the purpose of accrediting future engineers. If you look at the stack of mathematics and engineering textbooks that a prospective engineer must master, it would be a rare (and gifted) individual who would have the self-disipline to master all such material outside a university setting.

Should this gifted individual who is conducting his self-training have to read and master all the required texts? Should it be left up to him to determine which can be ignored? That's similar to asking how many rivets of an air-plane wing can pop out and still have that wing retain its airworthiness.

Any corporation that hires an unaccredited engineer is risking injury to consumers and liability to itself. (One wonders how many psudo-engineers Boeing and NASA employ.)

It's possible that a bright person could master on his own all the medical textbooks a medical college issues, but that person would *never* be able to practice this self-taught medicine without having gone through the 4-year rigor of medical college. Unaccredited "doctors" are arrested in this country.

It's possible for a person to teach themselves how to fly a jumbo jet without any formal training, but you'll never see such an unaccredited "pilot" flying for United.

If the medical and flying fields set and maintain such high standards, why are you attempting to diminish the engineering field by claiming it is permissible to employ unaccredited psudo-engineers? And how many of these non-formally-trained workers are there in the field? 5%? 1%? How many published articles in the professional journals are written by such workers?

I spoke with an ocean engineering professor this morning (at the beach, naturally enough!) and told him what you said; he says he's never worked with a self-trained engineer on any OE or ME project, and he's surprised anyone would hire such an individual.

I called my brother-in-law at TRW and asked him - there are *no* non-formally-trained psudo-engineers working for TRW that he knows of (and

he's been with them for 20+ years).

Next time you're in an airplane or an elevator car, say a silent thank-you that the company that built the carrier you're riding in only hired accredited formally-trained engineers to design the device.

>I would also point out that the richest self-made man in the world,
>Bill Gates, never got his bachelor's degree. He dropped out in the
>excitement of helping to found the PC industry. I would say that
>his $15-20B proves that he didn't need whatever it was Harvard
>thought they could teach him.

Did he drop out in his freshman year? Nope. Did he found his company all on his own or did he hire formally-trained engineers? A manager might not need the formal training, but you'd better believe the products that are released to the comsumer have been passed by formally-trained workers.

My dad never finished high school, yet went on to become a very successful (and very wealthy) developer of commercial properties. That would be very difficult to achieve today, as would Hewlett and Packard's successful garage-started business. The time-frame one begins a business is of the utmost importance, regardless of his backround - he can always hire those with the necessary expertise for product developement.

>Many other programmers that built the
>PC software industry at both Microsoft and Apple did not have a
>degree either.

That says something about programming that I won't go into here... =:o

>ylshih@alumni.caltech.edu

Caltech? You should really know better than to be diminishing the engineering field as you've done.

A few Central Indiana hams are working to create a web site that is devoted to Indiana Ham Radio Information. We have organized a reasonable structure for this site. We have all of the framework for an excellent service to the Indiana and National Ham Radio community. We have this wonderful structure. Now we need information to put on this site. We are ready to start including information We would like to include all available Indiana Ham Radio information. This information includes VE sessions, club info, net schedules, repeater information. But it is not limited to this information. We are interested in including any information that is relevent to National Ham Radio operators, as this would include Indiana Hams. We have a near COMPLETE Indiana Repeater Directory. This directory covers 29 MHz through 1296 MHz including ATV Repeater Sync channels. This directory includes HUNDREDS of repeaters. This web site is located at http://www.kconline.com/ciar Please send comments, questions, and information to: David Norris kg9ae@geocities.com

> Is there a universal 2 meter channel that is popular, kinda like ch19 on
> CBs?

Yeah. It's called the National Simplex Calling Frequency and its location is 146.520 Mhz. Not widely used in metropolitan areas though. That's where your local ragchew repeater is. Here in Denver, Colorado, it's on 145.145 Mhz. On there, you'll hear people commuting to and from work during (and sometimes even after) the morning and evening drives.

Trust me. It never fails. You can even set your watch by it in some cities.

Just my humble opinion.

73's for now my friend!! :-)

As long as they are actually transmitting in the Advanced portion of the band, then they are okay although I have to admit that's just like putting up a 2 meter repeater with an input (or output) of 147.995 Mhz. Dangerously close I'll admit, but as long as the operators in question know what they are doing, I have no problem with it.

Just my humble opinion... :-)

Have you ever thought of operating QRP voice??? Believe it or not, you
can. Think about it. Working someone on 80m voice with nothing more than
a wire for an antenna (properly tuned, of course).

Food for thought, perhaps....

Most would agree there is nothing wrong with having CW as a mode of communication in Ham Radio. But its obsolete so why make it a criteria for getting an amateur radio license???

I wonder who said its obsolete? the novice and techs on the high bands or the ARRL who is looking to recruit more CB operators to the Ham ranks for the sake of money---its called revenue and also collaboration with the manufacturerers which are mainly in JAPAN.

The bands are slowly deteriorating as it is---thanks to the FCC and ARRL's VE testing---what a joke. At least if we keep CW we have some filter. After all, whats wrong with learning something to pay your dues. These is not unique to many many organizations.

I'm sure many of the young new hams will not like this---we want more for less I guess!!!!

Flame you Jerry, no, I'd call it more like throwing your words back at
you. We'll never be on the same side of the fence Jerry. I can't match
your vindictiveness, wouldn't even try if I could.

BTW, your writing style is really not too obtuse for me Jerr, I still
recognize insults when I see 'em. You just keep trying to be a general
good guy while ripping people new assholes. That's what your good at.

Still 2 dyslexics who passed the 13. You and me.

Hello. I was testing moon bounse and see if I could get
someone out there, but it failed. I have 2M 45W output with a small
antenna. do you think it is good enough ? I was sending out on
144.000~144.200, but I never got the responses.

>I am a amateur radio operator. I would like to know where to
>buy the book.

When I lived in Japan many years ago, the code list was published
occasionally in the Japanese magazine CQ Ham Radio. I would suggest
writing the Japan Amateur Radio League for sources, unless a JA ham
shows up in this thread--sorry, I don't have their current address, but
it should be in the US or international call book.

>U.S. ham can only send International radio telegraph code, even American
>telegraph code is illegal.

True, but I wonder who would be listening closely enough to notice?
Besides with all the code machines who *listens* to code any more? :-)

> Ever wonder why Hawaii has interstate highways???

Gosh, I've never seen one here. All the roads around
here are state and county. Don't recall seeing
I-XXX anyplace, nor on any of the islands. Must
have missed something around here. Anyway,
the max speed limit here on Kauai is 50 mph,
and that perhaps exists a total of about
15 miles of our 86 miles of roadway that
even has that speed posted along for short
stretchs here and there. Would be pretty
wasteful to put in an I-XXX roadway on Kauai.
Also, there is no one out here who will sell the
land for such a roadway! The old estates apparently
are not even subject to the state or Feds taking the
land. By estates, that is the land holdings, plantations
of the LARGE, so called BIG FIVE land owners,
al la same Central American land owners.

Would you believe I have seen a new Ferrari here
on Kauai in the last week. Two young gals driving
it around. What a waste for such machine on our roads!

Anyhow, 73 and enjoy Amateur Radio (which means
one who loves radio, from the Latin, amo. amas, amat)

Jim, KH7M

>The bands are slowly deteriorating as it is---thanks to the FCC and ARRL's
>VE testing---what a joke. At least if we keep CW we have some filter.

What makes you think the bands are in "good shape" as it is?
The conversation of the "old guard" is severely lacking.
2m is much more lively and interesting. HF conversation
is extremely dull in comparison. I suspect that everything
that could be said, was said ... 30 years ago.
HF is in dire need of new blood. The CW filter is killing HF.

>After all, whats wrong with learning something to pay your dues. These is

Only thing I ever did in Hawaii was go to the bathroom at the airport, but
Ive seen maps of the big Island showing "H1" and "H2" drawn with the same
style and symbol as our interstates here in the lower 48 states. I don't
see any interstates in Alaska, though.

Yes, use a 12 volt gel cell or an old car battery or a good regulated power supply. If you have to ask how to hook it up, what luck do you think you may have trying to repair it, unless its a broken belt on the deck or something?

REF/A/DOC/DOD/860117/NOTAL//

AMPN/DOD DIRECTIVE 4650.2 OF 17 JAN 86//

RMKS/1. 48TH ANNUAL ARMED FORCES DAY COMMUNICATION CELEBRATION IS
SCHEDULED FOR SATURDAY, 17 MAY 1997.

2. ARMY, NAVY, MARINE CORPS, AIR FORCE AND COAST GUARD ARE
CO-SPONSORING AN AMATEUR RADIO PROGRAM IN CELEBRATION OF
ARMED FORCES DAY PER REF A. THE CELEBRATION FEATURES
TRADITIONAL MILITARY TO AMATEUR CROSS BAND COMMUNICATIONS
TEST AND MESSAGE RECEIVING TEST. THESE TESTS GIVE AMATEUR
RADIO OPERATORS AND SHORT WAVE LISTENERS AN OPPORTUNITY
TO DEMONSTRATE THEIR INDIVIDUAL TECHNICAL SKILLS. THE AMATEUR
RADIO OPERATORS WILL RECEIVE RECOGNITION FROM A SERVICE MARS
CHIEF OR APPROPRIATE MILITARY RADIO STATION FOR THEIR PROVEN
EXPERTISE.
A. THE PROCEEDINGS WILL INCLUDE OPERATIONS IN SINGLE SIDEBAND
VOICE (SSB) AND DIGITAL MODES (RTTY, PACTOR, AND AMTOR). THERE WILL
BE NO CW TRANSMISSIONS. AS OF 01 OCTOBER 1996, CW TRANSMISSION HAS
BEEN DISCONTINUED ON MARS FREQUENCIES.
B. PARTICIPATING MILITARY RADIO STATIONS WILL AWARD
COMMEMORATIVE ACKNOWLEDGMENT (QSL) CARDS TO AMATEUR RADIO
OPERATORS ACHIEVING A VERIFIED TWO-WAY RADIO CONTACT.
SPECIAL COMMEMORATIVE CERTIFICATES WILL BE AWARDED TO ANYONE
WHO RECEIVES AND ACCURATELY COPIES THE SECRETARY OF DEFENSE
ARMED FORCES DAY MESSAGE. CHIEF ARMY MARS WILL PROVIDE SECRETARY
OF DEFENSE ARMED FORCES DAY MESSAGE TEXT TO THE SERVICE MARS
ORGANIZATIONS.

3. MILITARY-TO-AMATEUR CROSS BAND TEST. OPERATIONS WILL TAKE PLACE FROM 17/1300Z UNIVERSAL TIME (UTC) TO 18/1300Z UTC MAY 1997. MILITARY STATIONS WILL TRANSMIT ON SELECTED MILITARY FREQUENCIES AND LISTEN FOR AMATEUR RADIO STATIONS IN AMATEUR BANDS INDICATED BELOW. THESE FREQUENCIES ASSIGNED BELOW ARE THE "ASSIGNED FREQUENCY"

TO DERIVE "WINDOW FREQUENCY" DROP 1.5KHZ FROM ASSIGNED FREQUENCY FOR UPPER SIDE BAND (USB).
EX: 4005.0 KHZ (ASSIGNED FREQUENCY)
- 1.5 KHZ
4003.5 KHZ (WINDOW/DIAL FREQUENCY)
MILITARY OPERATOR WILL ANNOUNCE THE SPECIFIC AMATEUR BAND FREQUENCY BEING MONITORED. DURATION OF EACH CONTACT SHOULD BE LIMITED TO 3 MINUTES.

916. Where are the Poets?

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-13 00:00:00 UTC
From: Jim <jim.parnell@nzart.org.nz>
Message-ID: <3351AF09.2921@nzart.org.nz>
Source record: 200517

WHERE ARE THE POETS?

Although they write about all other realms of human endeavour,
poets have consistently ignored radio and electronics as subjects
for their metrical compositions. Have you ever seen an ode to a
radio? Or a sonnet to a CPU?

It can't be because it is a technical subject - the steam engine
is well represented in rhyme:

The Neigh of the dragon, a terrible cry,
Wild, piercing, and shrill, has gone up to the sky;
He pants for the start, and he snorts in his ire
His life blood is boiling, his heart is on fire.

From: "The Locomotive". by Ben Preston.

And so are ships, for example, John Masefield's "Cargoes":

Dirty British coaster with a salt caked smoke stack,
Butting through the Channel in the mad March days, ...

>From its title, you might think that Robert Burn's "To a Mouse":
might qualify - but it doesn't; it refers to an animal:

Wee, sleekit, cow'rin', tim'rous beastie,
Oh what a panic's in thy breastie!
Thou need na start awa sae hasty,
Wi' bickering brattle!
I wad be laith to rin an' chase thee
Wi' murd'ring pattle!

"Melancholy", by J Fletcher might, with a stretch of the
imagination, describe a computer programmer trying to get a
program to run:

Hence, all you vain delights,
As short as the nights
Wherein you spend your folly:
If man were wise to see't
But only melancholy,
O sweetest melancholy.

If W Drummond can go into ecstacies in: "To His Lute":

My Lute, be as thou wert when though didst grow
With thy dear mother in some shady grove,
When immelodious winds but made thee move,

And birds their rampage did on thee bestow.

Why can't someone go into raptures about their handheld?

OK, radio and electronic equipment just sits and doesn't move.
But neither did the urn about which Keats wrote an ode:

"Ode on a Grecian Urn":

Thou still unravished bride of quietness,
Thou foster child of silence and slow time,
Sylvan historian, who canst thus express
A flowery tale more sweetly than our rhyme.....

Astronomy is highly scientific, yet poets become lyrical when
they consider the heavens:

The spacious firmament on high,
With all the blue ethereal sky.....

At least, the ether got a mention!

They say that beauty is in the eye of the beholder. If so, then
why have some the thousands who are engaged in radio and
electronics activities not been inspired to express their passion
for their activities and creations in verse?

Please do not ask me to venture into the realms of poesy:

I am not a poet,
And I assure you that I know it.
All I write is doggerel
Which neatly rhymes with Quetzalcoatl.

Jim, ZL2APE.

FCC Expected to Unveil Plans For Two Airwave Auctions

WASHINGTON -- Federal regulators are expected this week to set plans for two long-awaited auctions of valuable airwaves, including one for an emerging wireless technology that could bring new competition to the local-telephone and cable-television businesses.

Wireless operators, long-distance phone companies, electric utilities and telecommunications entrepreneurs are eager to bid for licenses to use huge chunks of the amateur radio spectrum to transmit voices, pictures and data.

Wireless Auction

Up for grabs: Licenses to use most of the amateur radio megahertz of electromagnetic spectrum in each of nearly 500 markets nationwide. Repeater frequencies are much in demand by those with the following: Uses: Transmitting voices, pictures and data via small, flat antennas that can rest on a windowsill. Expected bidders: All sorts of telecommunications companies -- but Baby Bells and cable operators will be barred from bidding on licenses in their home territories.

"While the auctions for PCS frequencies were very specific about how the frequencies could be used, rules governing LMDS usage are more liberal and for a bigger chunk of amateur radio bandwidth," said Michael Sprayberry, director ofwireless strategy for MCI Communications Corp.

New Radio Service

The auction rules have been delayed in recent weeks because FCC commissioners couldn't agree on what amateur radio spectrum would be available.

The technology operates with small, flat antennas that communicate with larger antennas mounted on towers. It has tended to work poorly in heavy rains and fog, but industry officials say they are working to fix the problem. Operators also could run into resistance from cities that increasingly are blocking the construction of new antenna towers. However ham towers could be seized as the FCC has decided that the amateur radio service no longer serves the public necessity.

From: WA2RCB@N3ACL.#SEPA.PA.USA.NA
To : K1OIK@K1UGM.#EMA.MA.USA.NA

Yes, DX'ers are a unique breed of people Burt. My guess is that
if their wife was next door in the kitchen gagging on a piece of
fried chicken bone, and there was a rare-dx station on the air
at *ezactly* the same moment, 98% of the DX'ers would choose to
let their XYL's writhe on the floor and turn screen-saver VCR *blue*
first before missing the opportunity to work Kuntakintae in Lower
Gibipp. Reminds me of a funny event from a few years ago, when I was
a Director in a radio club. Had a director's meeting at this guy
house. After the business was over, went into this guy's shack.
(He was a big-time DX'er here in NJ - having worked 300-something
countries) He seemed to get somewhat irritated when I did not
share his enthusiasm for DX. After the 3rd attempt to get me to
pay some kind of hommige to him while sticking a *framed* QSL in
my face from some filthy rich ham who runs a sweatshop in Puerto
Rico who spends 98% of his time running to mud-huts in Africa in his
Lear jet. I then told him I did not give a rat's --- about DX. (I only
did this because he was so damm adamant about DX as being as important
as the second comming or something...) Well, I thought he was going to
toss me out of his QTH, but he seemed to not have the gutz for that, so
I retired to his living room to drink as much soda and chips he put out
and laugh about this whole incident with 2 friends of mine who were
there and shared my humor ove this whole screwball funny incident.
(he has put out several pint-size bottles of Coca-Cola...I had my CIA
type trench coat with me, and pocketed 3 of them just for funzies...)
So Burt, there U go, DX'ers: Ham radio's greatest mutual admiration
society. Almost as bad as contesters who run illegal power...birds of
a feather...

"SOCIETE ANCIENT TELEGRAPHERS INTENTIONAL REDUCIO EXTREMIS"

-- WORKS ONLY DX AWARD --

In recognition of an extraordinary operating accomplishment, amateur
radio
operator _________ is hereby awarded the prestigeous Works Only DX
Award, based upon the fact that said operator limits his contacts to DX
STATIONS ONLY, and has not, within the past 6 months, had any on-the-air
conversation (either by CW, phone or other operating mode) with any
other
operator residing in his own country.

In addition to denying himself the pleasure of chatting with his fellow
countrymen (in dedication to his single-minded pursuit of rare DX
contacts),
said operator has achieved further distinctions. The following special
endorsements to this certificate also apply:

( ) Works only stations from countries from which he has not already
received
a QSL card.

( ) Devotes at least 6 hours each day to monitoring packet cluster
spots

( ) Exchanges only minimal information, to avoid unnecessarily
prolonging
contacts

( ) Abruptly terminates any domestic contact which may have been
erronously
made during the heated pursuit of DX

923. Stick a fork in ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-13 00:00:00 UTC
From: Burt Fisher <burtfisher@geocities.com>
Message-ID: <3350C0FA.51A1@geocities.com>
Source record: 200524
Cross-posted to: ec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

It has become evident that the ex-service now hobby is done:
Stick a fork in it!

It serves no one that cellular doesn't.
We are not unique, look around. Everyone has radios, phones.

Most operators are tunnel-visioned, goat-headed people. They think that
the license, the code or the younger thinkers are the problem:

I contend it has been the ARRL, NTS and the volunteer exam/incentive
licensing that has did it in. To many "elite" people who must complain
when someone says what they want to say or operate as they want. I once
thought packet radio might go somewhere but we never got over 1200 baud.

Now if the fact that cell phones were allowed in the Olympic venues
but ham radios were not doesn't show you something, listen to a voice
traffic net like the Indiana Traffic/DewDrop/Mushroom Cloud Spotting net
some afternoon. NTS needs to tie up a radio frequency to handle fake
messages for people who are too lazy to pick up the phone or mail a
letter to mom wishing her happy birthday. Give me a break! They even
pass phone numbers of recipients AND NOW even E-MAIL ADDRESSES!!!A JOKE!
Right?

I am just waiting till all the VHF spectrum is gone, along with most
of the HF spectrum. Then we will all be CBers, like many elite hams
call others in order to degrade an opinion they can't stand to debate.

Structure, as per ARRL, has not kept up with the purpose of the
"service"
That service used to be needed, now we are "bookmarks"for other wireless
services. The latest band gone is 2300 MHz for wireless internet, not
for packet, which should have pushed been years ago, along with:

902-928 GONE well "shared" by every device that would hear hams! Lesson?
220-222 GONE
144-148 soon to be gone
222-225 soon to be gone
430-450 soon to be gone

Do you get the picture?
Maybe I drew one for you...

>the ARRL who is looking to recruit more CB operators to the Ham ranks for
>the sake of money---its called revenue and also collaboration with the
>manufacturerers which are mainly in JAPAN.

CW has not proved to be og any value except as personal enjoyment
for many years now. That is what makes CW obsolete as a required
mode in terms of knowing morse code as ever increasing speeds.
Use it all you want, but do so knowing it isn't anything related to
safety, emergency ops or any other practical application.

>The bands are slowly deteriorating as it is---thanks to the FCC and ARRL's
>VE testing---what a joke. At least if we keep CW we have some filter.

You get a gold star for att least being honest and saying you
want it to keep others out rather than because there is any
compelling reason that anyone should learn it.

>After all, whats wrong with learning something to pay your dues. These is
>not unique to many many organizations.

Amateur radio is NOT an organization. Paying your dues is fine
for fraternities/sororities...NOT for government regulated
service like amateur radio.

>I'm sure many of the young new hams will not like this---we want more for
>less I guess!!!!

As one of the old and not new, your statement is just another effort
to discredit people rather than ideas. I want the license requirments
for any license to be rational and justified...not by the subjective
attitude that a requirment should be kept just to keep out newcomers.

>for getting an amateur radio license???

Indeed.

>I wonder who said its obsolete?

All of the world's radio services have said it is obsolete, and either
have already discontinued its use, or are in the process of discontinuing
its use, save one holdout, amateur radio. Think about that. Is everyone
else wrong? I don't think so. Information theory and coding and modulation
theory agree with them. It isn't just whim. Morse is objectively the
worst text encoding in use over radio. It is excruciatingly slow,
error prone, and very labor intensive. Much better methods are available.
Amateur radio's charter says we're to advance the art, not lag its
trailing edge. Yet our licensing system rewards those who lag the
trailing edge. That makes no sense.

>the novice and techs on the high bands or
>the ARRL who is looking to recruit more CB operators to the Ham ranks for
>the sake of money---its called revenue and also collaboration with the
>manufacturerers which are mainly in JAPAN.

You seem either confused or unobservant. The ARRL is fighting *against*
eliminating Morse testing. They are opposing the WRC99 inititive to
delete S25.5, and they've proposed re-instituting a sending test and
returning to one minute of solid copy. The ARRL was also the primary
one fighting against the institution of the code test free Tech license
in the period 1981 (when it was first proposed) to 1991 (when the QCWA,
TAPR, and others interested in modernizing amateur radio finally managed
to push it through over ARRL objections). This is not something being
pushed by the ARRL. They have been in the forefront of opposition to
any positive change in amateur rules for many years. Nor is it primarily
new Techs who are pushing this. Many of us pushing this have been amateurs
many years. (I've been licensed 34 years, for example.)

Of course the radio manufacturers would like to sell more radios, but
remember that they sell to a world market, and US amateurs are now
a small fraction of that market, less than 20% (and that's a shame,
the US amateur service used to dominate world amateur numbers). The
real beneficiaries of a revival of the US amateur service would be the
domestic industry. It is nearly dead now, but would have some chance
of regaining some vigor with a healthy US amateur service (it was
vigorous once, pre-68, before the ARRL and its Incentive (to pass

faster Morse tests) Licensing nearly killed domestic amateur radio).

The fact that the amateur industry is hurting now, and it is, should be an indication of just how badly the US amateur service is hurting as well. To see that, all you have to do is examine the demographics of the US amateur population. The average age is over 50 (down from 59 before the code test free Tech license). A vigorous and healthy service would have an average age closer to 35 (and it did pre-68).

You have every reason to rail against the ARRL. They nearly killed amateur radio in 1968, and they have opposed any positive changes in the amateur service since then. They have fought every attempt to modernize amateur radio. They are the force of reaction. But you cannot accuse them of being venial. Their membership has been shrinking as a percentage of licensed amateurs since 1968, and they have a half million dollar budget shortfall this year. That's because of their policies, which have attempted to hold amateur radio back from regaining its role as a leader in the communications world.

Amateur radio has become the laughingstock of the communications world with its clinging to the obsolete Morse code. Once amateur radio was a leader in communications, now it lags behind even the trailing edge of commercial practice. Much of the blame for that can be laid at the doorstep of the reactionary forces at the ARRL and their insistence that the primary aspiration of a radio amateur is to do Morse code really really fast.

>The bands are slowly deteriorating as it is---thanks to the FCC and ARRL's
>VE testing---what a joke. At least if we keep CW we have some filter.
>After all, whats wrong with learning something to pay your dues. These is
>not unique to many many organizations.

In the first place, the vast majority of the miscreants in amateur radio are code tested licensees. In fact many of them got their licenses *before* the VE program started. There is no evidence whatsoever that the amateurs entering the service under the VE system are any worse behaved than those who entered after taking an exam before the FCC. The exams have never been a behavior filter, certainly not the Pavlovian conditioning represented by the Morse test. The amateur license class with the highest percentage of NALs has historically been the *Extra* class. From that we could draw the conclusion that faster Morse testing selects *for* those who are most ill-behaved. (I don't make that assertion, but it is more statistically defensible than the claim that lack of Morse speed leads to bad behavior.)

What *has* changed is that the FCC has virtually abandoned *enforcement*. When I entered amateur radio 34 years ago, there were troublemakers then too (code tested every one), but the FCC would quickly crack down on them and shut them up. That doesn't happen anymore. If you want to point to the reason our bands are deteriorating, *that's* where you have to point the finger. It has never had anything to do with Morse testing, or any testing at all for that matter (the boogyman CB was well behaved when the FCC *enforced* its rules there too). All testing can do is remove the excuse,

"I didn't know" from the vocabulary of a violator. And that is done with the *written* test. As far as I know, there has *never* been a NAL issued for poor Morse speed in the history of amateur radio. That just isn't a matter of concern.

The idea that Morse speed testing selects for dedication is not totally false. But Charles Manson's followers were dedicated, David Koresh's followers were dedicated, the 39 Heaven's Gate followers were dedicated. K1MAN is *notoriously* dedicated. Dedication can be an evil thing or a positive thing. It is morality neutral. What you need to understand is that an amateur licensing exam *is* a government licensing exam. It is *not* an initiation into a cult or fraternity. Like a driver's license exam, its purpose is limited to determining that you know the rules of the road and *can* operate without becoming a hazard to others. It doesn't assure that you *will* behave in an appropriate manner. Only enforcement can address that.

I used an AEA Ioop antenna in the attic of my townhome for a couple of years and had to adjust the "Iso-loop's" distance from the radiating loop to get the SWR down to an acceptable level. If you open the covers you will see that the small coax loop can be moved back and forth. Try adjusting that spacing to lower your SWR.

Good Luck,
..Eugene.. AA9LA

Hi everyone:

I've been giving this some thought and I thought it would at least be worth considering. I'm BIG into QRP, but since I'm still a no-code techie, I thought I'd try doing a rather somewhat unique form of QRP.

I have a RS TRC-502 49 Mhz. transceiver that I'd like to convert into 6 meter FM simplex. Now given the band's most recent activity over the last year or two, coupled with the fact we are starting to get back up on the upside of the sunspot cycle, I thought I'd at least give it a try.

My problem is finding places that sell 6 meter conversion kits (with CTCSS tone board) and 6 meter crystals. Anyone have any ideas as to where I might go in order to get these parts???

My rationale for wanting the tone board is that here in the Denver area, 52.525 Mhz is now linked to a 440 Mhz. repeater that gets a fair amount of use, but the repeater is now PL'd.

Any ideas, useful tips and other such information would be greatly appreciated!! :-)

I look forward to your replies!! :-)

73's for now my friends!! :-)

As far as I am aware, all UK repeaters can currently be accessed with the 1750 tone. Some mainly in the South can additionally be accessed via CTCSS tones. Most in the North can't. Those that can open with CTCSS are supposed to transmit a letter following their call sign that indicates the CTCSS frequency in use. If you don't have a 1750 tone burst, try whistling an ascending or decending note. Many do and it works. Some repeaters also require a minimum length audio transmission after the tone, which has been installed simply so that those that try to key up the repeater with a tone burst alone and have no intention of saying anything, don't succeed.
Have a good time this side of the pond

The ARRL Radio Amateur's Handbook some years back - around 1983 - gave Japanese Morse Code along with Morse Code for several other languages in a table.

Note that all these forms of Morse are variants of International Morse Code.

The book "America's Black Chamber" by Herbert O. Yardley, available again in a Ballantine paperback, and the recent book "Betrayal at Pearl Harbor", which claimed that Churchill could have warned the U.S. about Pearl Harbor ahead of time, but did not, also include a table of the Japanese version of Morse Code (in fact, the latter reproduced the table from the former). (Although having no particular respect for the thesis of the latter book, I purchased a remaindered copy for the pictures of cipher machines...)

CW is one of those annoying "motor skills" things that eat up an excessive amount of time to learn, as compared with learning radio theory. It kept me out of ham radio about 5 years untill I learned the damm thing in 1976 and went down to the FCC and took the exam. I used CW like once or twice. It's too slow and combersome for communicating anything.

I live in an apartment, so I couldn't do much on HF even if I upgraded (antenna restrictions).

Part of the reason for doing the interstate highway system is to allow
the military an easy way to transport their stuff around the country.
During WW2, the road system was found to be insufficient to handle the
needs. Railroads were heavily used to get stuff transported, but are
more easily messed up than highways.

Hello:

I have the following items that I no longer need and are gathering
dust around the house:

1) Borland Turbo C++ For DOS v 3.0: This is a complete install on BOTH
3.5" and 5.25" HD disks
and comes with the full documentation (a VERY big book!).
While this will NOT compile
NOS without some major changes to the source code, it can
compile many other programs
and be used by someone who wants to learn C or C++
programming. Has a very nice DOS
developer's environment.

Sells new for $90.00

Your price: $45.00 obo

2) Borland C++ For Windows, DOS, and Win32 v 4.51: This is a complete
install on 28 (!) 3.5"
HD disks. Fixes a very minor bug in v 4.50 (I never saw it
come up!). Must be FULLY
installed to the hard drive (needs almost 100 megs). Is
otherwise identical to #2
above.

Sells new for $300.00

Your Price: $65.00 obo

3) Info Magic Linux CD Set: This a VERY complete Linux package and
includes full installs for:
Red Hat 3.0.3, Slackware 3.1, Debian 1.1.4 and more. Has
XFree86, full HOWTO set, and
much, much more. This is a >6< CD-ROM set! Not that the CD
case itself is damaged, but
the CDs themselves are just fine. There are many Ham packages
(mostly packet) that run
under Linux with many more being added all the time.

Sells new for $50.00

Your Price: $35.00 obo

****
* SPECIAL ONE FOR ALL DEAL: *

****
* TRADERS TAKE NOTE *
****

Those Hams wishing to trade, I am looking for the following Ham gear
(must be in good working order and complete.):

1) Any 6m FM or SSB xcvr. Tube or solid state OK.
2) Any 2m FM or SSB xcvr. Tube or solid state OK.
3) Just about any packet gear... TNCs, radios, what-ever. I am
especially looking for an SCC
type card.
4) Any 2m hand held with good battery.
5) Let me know what you have! Please note that I have no interest in
HF gear.

****
* SPECIAL NOTES *
****

1) Due to export restrictions, the above may be sold only to US
citizens and shipped only to US
addresses.
2) All prices include shipping by my choice of carriers.
3) I prefer to sell as a package and package offers will take
precidence.
4) I prefer to trade the items and trade offers will take precidece.

If interested in any of the above items, please contact me via packet
or E-Mail at the addresses below. Please include your name, packet
and/or E-Mail adresses, phone number(s) and hours I can contact you.

Thanks!

I will be conducting an amateur radio demo at the
Georgetown Middle School in Georgetown, Ky. as
part of a science and social studies unit. Since the
classes will be studying Australia, we would like to
make contacts there, but would be thankful for any
DX contacts. I know propagation is poor, but we
hope to be able to make at least a few DX QSOs.
The callsign I will be using for this event is WA4JAV,
and I will be active on April 18, 1997 from around
8AM to 3PM EDT on the SSB general class sub-bands
of 20 and 40 meters. I will also use CW if conditions
are especially poor, or a specific station wants to use
this mode. I plan to try 20M first, then move to 40M
later in the day when 20 will probley go out. If you
read this post and think you can stand-by for us or
make a sked, please reply via email, as I am not
currently subscribed to this newsgroup. Thanks in
advance to anyone who can help make this school
event a sucess.

947. old call, new holder

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-14 00:00:00 UTC
From: W1PR@qsl.net
Message-ID: <5is9sg$o6u@mtinsc03.worldnet.att.net>
Source record: 200392

I guess it was bound to happen. Within 3 weeks of my being assigned W1PR in the Great Vanity Party of Nov. 4, I received an NTS radiogram from the W1 buro informing me that it had cards for me. Wow! Talk about speedy QSLing! Though skeptical, I knew I would accumulate my share of cards eventually, and besides, I had already worked a bunch of JAs, so it was plausible that there really were cards for me so quickly. I dutifully sent my green stamps, and yesterday got my first batch of cards under my new call. Some were 10 years old! A few were only 2 or 3 years old. None were for the "new" W1PR.
It gave me a funny feeling. After all, I knew that for the call to be available it had to have been inactive, but I thought that maybe it had been dormant for longer than only a couple of years. Who was the former holder of my brand new call, and how had he been so slovenly as to allow DX cards to accumulate unclaimed at the buro for 10 years? And why did I have to pay the postage to get them?
Well, where ever he is, I hope the propogation is better than it's been here recently. And if the buros suddenly find addresses for calls that have been inactive for years, they might consider that the our vanity is responsible.

Anyone know a company that sells mil grade 2m repeater? I'm part of a amateur satellite project that's trying to get started and I want to put a mode A voice repeater on it. I have the downconverter, just need the repeater. Something that can stand extreme temps and its power can be computer controlled with a minimum of .75 watts would be great. E-mail me directly if you have any input.

>
You can get as close to the band edge as you want as long as none of your
signal falls outside the band. I hear a lot of operators on 10 meters
sitting right on 28.3 assuming that they are not out-of-band because
they are on upper sidband so all their signal must be above 28.3. Not so,
some of the signal actually falls below 28.3, so technically they are
operating out-of-band. You need to stay a couple of khz away from the
band edge just to be safe.

950. Ham Radio Classes in the South Bay

Newsgroup: rec.radio.amateur.misc
Date: 1997-04-14 00:00:00 UTC
From: ikluft@thunder.sbay.org
Message-ID: <E8M36r.K84@thunder.sbay.org>
Source record: 200395
Cross-posted to: rec.radio.amateur.misc,sbay.hams,sbay.general,ba.general

PLEASE FORWARD THIS TO ANYONE INTERESTED IN GETTING A HAM RADIO LICENSE.

The West Valley Amateur Radio Association (WVARA) is presenting a FREE
Amateur Radio class in Cupertino. Anyone in the South Bay Area interested
in getting a Ham Radio license is welcome to attend.

The class will be held on Mondays and Wednesdays starting April 21st.
It will end on June 11th. The times of the class are
6:30-7:00PM Morse Code (optional)
7:00-9:00PM Theory
It will be held at Monta Vista High School in Cupertino. The size of the
class is limited to the capacity of the Monta Vista lab (about 30 people.)

About the Class

The objective of the class will be to earn your Technician license
(Morse Code not required) or your Technician Plus license (with Morse
Code.) The Technician license has VHF/UHF privileges including
repeaters and digital packet radio. In addition to those, the
Technician Plus license also has HF privileges, allowing you to talk
to Hams around the world.

Classes will be held in the computer lab at Monta Vista High School in
Cupertino. The quizzes on portions of the Ham Radio exams at each session
will be taken and graded via the Internet.

The last session of the class (June 11) will be an open-to-the-public
Ham Radio exam session (pending arrangements with the Sunnyvale VEC to do
the exams).

The class is free except that we do ask that you purchase a copy of "Now
You're Talking" (Second edition) which will be the class text. It's available
at any local Radio Shack store, Ham Radio Outlet in Sunnyvale or Halted
Specialties (HSC) in Santa Clara.

Students will be responsible for their own exam fees whether they take
their exams at the last class session or at another VEC test session.
Exam fees in 1997 have been set by the FCC to a maximum of $6.26 per test
session although most Volunteer Examiner Coordinators are charging $6.00.

By finishing the class on June 11, the students will probably all have
their licenses in time for Amateur Radio Field Day 1997 (June 28-29) even
if anyone needs to re-take an exam at a regularly-scheduled VEC session.
Field Day is a great chance to learn more about the hobby and an opportunity
to operate radios on HF and VHF. Students will be invited to participate

at the WVARA's Field Day site in the Santa Cruz Mountains.

No Minimum Age

There is no minimum age for getting an Amateuir Radio license, except for practical limits on learning the material. The youngest licensee from the WVARA's 1996 classes was 9 years old.

For More Information

If you'd like to request more information or sign up for the class you can e-mail us at
education@wvara.org
visit our Web Page
http://www.wvara.org/ (select the link for "Education")
or call
408-292-3173 (leave message)

This class is being sponsored by West Valley Amateur Radio Association, a non-profit volunteer-operated organization in San Jose. The instructors will be volunteers from the WVARA. This is provided as a public service.

Michael Lyon KE6MRE, WVARA Education Coordinator <mlyon@qpt.com>

*** NEW ICOM REFLECTOR ***

Due to popular requests and thanks to the help of Al Waller, K3TKJ, an ICOM Reflector has been established for our use.

This is a generic ICOM Reflector. This is to cover all ICOM Amateur Communication products: Old, new, receivers, transceivers and accessories. This includes the IC706. This forumis to share information or questions on ICOM communication products. Please subscribe, participate and enjoy!

To subscribe eMail: majordomo@qsl.net

Message in body: subscribe icom

We want to keep this simple. No address is needed after the "subscribe icom".

To post messages to the ICOM Reflector, send eMail to:

icom@qsl.net

73,
Ken, N0YGM--DM78ov

>>> extra portion of the band in usb.

If I remember correctly, your out of band spurious rejection for HF is
40 dB below the P.E.P. and if your opposite sideband (and carrier)
suppression is more than 40 dB, then I don't see why not. If you are
transmitting the 300 Hz - 3000 Hz audio signal with the suppressed
carrier of the USB signal at 21225.0 kHz, the occupied frequency range
is 21225.3 - 21228.0 kHz, well within the allowed range. However, you
must make sure that you are not overdriving your transmitter to
produce intermodulation products of two or more tones within the
intended frequency range that would fall below the carrier frequency
and be stronger than -40 dB below the peak power.

>>As long as they are actually transmitting in the Advanced portion of the
>>band, then they are okay although I have to admit that's just like putting
>>up a 2 meter repeater with an input (or output) of 147.995 Mhz. Dangerously
>>close I'll admit, but as long as the operators in question know what they
>>are doing, I have no problem with it.

The FM case is much more complicated, since in principle the occupied
bandwidth of an FM signal is infinite with sidebands separated by the
audio frequency. However, for low modulation indexes, the amplitude of
the higher sidebands fall off very quickly (proportional to the Bessel
function of the modulation index) and the higher sidebands are usually
ignored. Again, if I remember correctly, your out of band spurious
limit for VHF is -60 dB, so all those sidebands that fall outside the
ham band must be more than -60 dB below the carrier. In the example
for a 3 kHz bandwidth, the second sideband would be outside the ham
band and had to be below -60 dB, i.e. an extremely small deviation
must be used. Note that the Carson's rule Bandwidth = 2 * (deviation
+ audio_bandwidth) is an approximation that is not accurate enough in
this case and you have to use the Bessel coefficients.

>
>73, de Hans, K0HB
>(K0HG@usa.net)

What you're looking for are papers on class E amplifiers by Nathan A. Sokal and A.D. Sokal (father and son). They also had a related patent. More papers investigating the math involved were written by Frederick H. Raab. I had copies of a number of these papers, but don't know what I did with them. I checked the _Ham Radio_ indexes from 1968 to 1985, and _QST_ from 1974 to 1978 and came up with only one article by Raab, titled "High-Efficiency RF Power Amplifiers", in _Ham Radio_, Oct. 1974. He references the papers by Sokal & Sokal, "A New Class of High-Efficiency Tuned Single-Ended Switching Power Amplifiers" (in two parts), to be published (as of 1974) in _IEEE J. of Solid State Circuits_. I can't recall whether they published in an amateur magazine or not. If so, it would have been _Ham Radio_ or _QST_, in the late '70's or early '80's. If you can get an index of IEEE publications, you should find the papers by Sokal & Sokal, and by Raab.

Basically, the class E amplifier uses a time-domain approach to design, which makes good sense to me. In my attempts to build them, I found that they were quite sensitive to the duty cycle of the driving waveform. This should be easier to control these days with some of the digital circuits now available. Raab gives a very brief description of class E operation at the end of his _Ham Radio_ article.

Do you *really* want to make a transponder by connecting a downconverter
to an in-band repeater??
I would advise you to read a bit on theory of transmitters and receivers,
and preferably transponders.

Rob

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated March 26, 1997

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

APRIL 1997

Apr 13 (Sun), Chicago, IL - CARC Ham Auction. DeVry Tech, 3300 N. Campbell Ave. Will auction your electronic goods at this auction if you bring them in before 12 noon. All goods subject to 10% donation. If purchased back by the sell, then 5% will be due. All sales as-is and final. Info: Dean (708)331-7764 or George (312)545-3622, days.

Apr 19 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Apr 20 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zan-cha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Infor-mation Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 4 (Sun), Sandwich, IL - DeKalb KARK Hamfest. Sandwich Fairgrounds at Suydam and Gletty Roads. Admission $6. Overnight camping on grounds $10. Talk in 146.73 (-600 kHz) or 146.52 MHz. Info: Bob Yurs, N9ZNA (815)895-3219 or n9zna@aol.com. Web page: www.tbcnet.com/~jleonard/hamfest.htm (Good, medium sized fest which grows each year. Good restroom facilities. Few commercial exhibitors. - AJ9S).

May 10 (Sat), Peotone, IL - Kankakee Area Radio Society ham-
fest. Will County Fairgrounds. I-57 to Peotone exit 327
(east). 6 AM. Admission $4. Talk in 146.94 MHz. Info:
Willis Bowser, K9IFO (815)472-2079.

May 18 (Sun), Orland Park, IL - Giant Computer show, Orland
Park Civic Center. See notes at the end of this article.

May 25 (Sun), Chicago, IL - Chicago ARC. DeVry Tech, 3300
N. Campbell Ave. Admission $5. Info: (312)545-3622 or
(312)486-6823.

May 31 (Sat), Springfield, IL - The Sangamon Valley Radio
Club. Illinois State Fairgrounds. This Hamfest is "rain or
shine" with over 100,000 square feet of covered and lighted
fleamarket space, plus indoor facilities. Info: Don, W9EBK
at 217-789-4519.

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds.
Free parking. Info: Debbie Burton, N9DRU, 1153 Union St.,
Marseilles, IL 61341-1710, tel. 815-795-2201 (Usually an
excellent hamfest, with sellers from Illinois, Iowa, and
Wisconsin. - AJ9S.)

Jun 8 (Sun), Wheaton, IL. Six Meter Club of Chicago.
DuPage County Fairgrounds, 2015 Manchester Rd. 7 AM.
Admission $5. VEC tests 9 AM - 1 PM. Talk-in on 146.97 MHz
(107.2 PL) or 146.52 MHz. Info (708)442-4961 or contact Joe
Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland
Park Civic Center. See notes at the end of this article.

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage
County Fairgrounds. County Farm & Manchester Rds., Wheaton,
IL. See notes at the end of this article.

JULY 1997

Jul 13 (Sun), Sugar Grove, IL - Fox River Radio League, Wau-
bonsee Community College, Rt 47 at Harter Rd. 6 AM. Admis-
sion $5. VEC tests 10 AM only. Talk in 147.21 (pl 103.5 &
107.2 Hz) Info: Diana, WD9API (630)293-7485.

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc.
(RARA) Amateur Radio and Computer Hamfest. Winnebago County
Fairgrounds, about 15 minutes west of Rockford, Il. Talk in
on 146.61 MHz, 114.8 Hz PL. This will be in the main exhi-
bition hall with room for tables. Ham Radio Vendors, Com-
puter parts vendors, tailgating, food. Code receiving con-
test, Throw the Radio contest, Great door prizes. For table
reservations contact Mike Anderson at (815)397-4304 or
mander5@ix3.ix.netcom.com. For any other information con-

tact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com or see http://www.rockford.com/rara/index.htm

AUGUST 1997

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. 6 AM. Admission $5. Talk in 146.52 MHz. Contact Bob Grosse, N9KXG. Info (voice/fax) (847)658-1678. http://www.angelfire.com/il/tcrg/ (Smaller, but fun fest. - AJ9S)

SEPTEMBER 1997

Sep 7 (Sun), Joliet, IL - Bolingbrook ARS. Inwood Recreation Center, 3000 W. Jefferson St (Rt. 52), Joliet, IL Admission $5. Outdoor flea market on paved parking lot. Indoor reserved tables. VE testing 9 AM - noon, bring original license and photocopy. Talk in on 147.33 (+600 kHz), 224.54, and 146.82 (-600 kHz). Table Info: Ed Weinstein, WD9AYR, (630)759-7005.

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen County AR Technical Society. Admission $5. Parking $2. www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

etc etc

what the hell is famous on astronauts?? Insert more call signs of russian cosmonauts. EVERY russian cosmonaut has to go through ham-radio practice as a part of preparation and he/she receives the license, but.... it is not their "primary waste of time" after their job were done. They use U#MIR and R#MIR in space, other call signs, maybe, on earth. German cosmos and astros have their call signs also.

Waldek, DL7ANQ && SO6ANQ

(visited RK3DZB - preparation station of russian space center, Star City, in 1996)

I am working for the BBC in Swansea, Wales, and we will soon be hosting
a "Marconi" week! I am looking for anyone who may be interested in being
interviewed (in a very informal manner, for about 5 minutes) on the
wonders of being a radio ham!
Any Welsh connections would be good but would be happy to hear from anybody
with something to say on the matter. please email me or post a message
here!

Many thanks

evansh60@wales.bbc.uk.co

My wife and I decided to get amateur licenses for use onboard our boat. 2 mos. of study later (thanks to Gordo et al) we took and passed the tests that the ARRL VEC's adminster up at Everett, WA (and thanx to those guys, also).

Sally got the Tech Plus and I did the General, the only difference being one additional written for me and, of course, CW at 13- vice 5-wpm. She could have passed the 13, I think, but trying even at 5 was freaking her out a little bit.

Question is about the callsigns ... I'm KC7MVT, she's KC7MVU. I know that they're supposed to be sequential, but being this close was surprising. More importantly, though, how is anyone to hear/read these callsigns and not assume that they're Novice Class? Did we get Novice style groupings simply because we hadn't been previously licensed? Do we need to worry about this? If we need to upgrade these callsigns in some fashion, how do we do that?

Gary, you are 100% right and this was one of the best explanations of the CW forever attitudes expressed by the ARRL and their stuck in the past croneys. The FCC has stopped all but a tiny fraction of their monitoring for infractions of the existing laws. The bad behavior inclinations were always out there, it was just suppressed by adequate enforcement. We do not have this anymore and it is only going to get worse. The ARRL has done a lot of good things, but it has become a "Good old boys club" with a limited ability to pull their heads out of the sand and see what the real world is all about. Its too bad this alzhiemers condition they are suffering from can't be turned around before it becomes terminal. We need something like the ARRL but its like a good person becoming the town drunk. Nobody takes him seriously anymore.

Russ Hughes WA7ACO

Licensed 35 years and can still communicate by code,
but why bother except just for the fun of it?

I wasn't sure if you had seen the Satellite Image Gallery CD-ROM yet. Quite a few ham operators have already ordered it (or our previous CD the "Satellite Image Sampler"). The CD has over 600 beautiful satellite images of the Earth along with games, tutorials and image processing software.

We've had the CD out for a little over a month and have just secured national distribution with a major catalog company. To celebrate, we are selling it for over the Internet for only $10.00 + shipping - until May 1st.

I won't waste your time here. You can visit http://www.idi-ut.com/sig.htm for more information and online ordering.

Thanks,

Doug Munn

The callsigns would be issued sequentially, after an alphabetical sort
was done on the batch, at least that has been my observation in the past
and Michael sorts before Sally. The reason you got "novice" callsigns is
that the "x7xxx" callsign pool has been exhausted, and the system falls
back to the next lower class pool to issue a callsign. Congratulations
on your new licenses. Double check your callsigns though, I think they
are KC7VMT and KC7VMU.

Which is not a top level domain, but a subdomain of .org ...
Thus the suggestion for .ham as tld.

How about using the (soon to exist) .nom domain?
w0rli.nom
hank_oredson.nom
etc.

Question: where will the associated ip addresses come from,
or do the new domains require ip v6?

FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 14 APRIL AND FORECAST FOR 15 APRIL - 17 APRIL

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 13 Apr
Daily Proton Fluence >1 MeV: 1.8E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.70E+05 (normal)
X-ray background: A3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Apr 16 Apr 17 Apr
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Apr: 78/17
COMMENT: Region 8031 may produce low level C-class flare events.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 13 Apr
Learmonth 7 3322 1211
Fredericksburg 5 7
Planetary 8 8

Observed Kp for 13 Apr: 1322 3321

2B. MAGNETIC FORECAST
Date Ap Conditions
15 Apr 8 Quiet to unsettled
16 Apr 6 Quiet
17 Apr 5 Quiet
COMMENT: Solar wind speeds appear to be decreasing and geomagnetic
conditions should remain at quiet to unsettled levels.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
14 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
15 Apr Normal Normal Fair
16 Apr Normal Normal Normal
17 Apr Normal Normal Normal
COMMENT: Predicted degraded HF comms for the period 11 - 14 April
did not eventuate.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
14 Apr 22

Observed Australian Regional MUFs:
Townsville: Mostly enhanced greater than 15%.
Darwin, Sydney, Hobart and Christchurch: Mostly near
predicted monthly values.

Predicted Monthly T index for April: 14

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
15 Apr 14 near predicted monthly values
16 Apr 14 near predicted monthly values
17 Apr 14 near predicted monthly values
COMMENT: Predicted degraded HF comms for the period 11 - 14 April
did not eventuate.

The ET-58-F is a GE Mastr Pro VHF highband transmitter. Original specs
are for up to 90W out between 150-174 MHz, but they should swing down
to 2m just fine. Final tube is a 5894 I've got a few now that I'm
using for T-hunt transmitters. I have a manual for the ET-57, which is
the lower power 35 watt version; I can copy this if you need one (rest
of group?)... The F is the revision number (My ET-58's are mostly A's
and C's, so you've got newer ones.)

The ER-41-C is the receiver counterpart to the transmitter. They can
swing down too without too much trouble.
Got the manual for this too, but also there was an article in 73
magazine January '95, pages 24-30 about tuning up and using these
receivers without the bulky power supply.

Hope this helps you out. I've also have some extra control heads and
power cables if you need 'em.

73....Mike, N3KEV

Hi Jim -- the only place I have ever seen such a list is in the "Flying Horse" International Callbook. It lists the Ham census by country.

Bill, Bill, Bill,
when you came in to ham radio, you knew the requirements.
And I know that here in the 90's a pervasive thought is "you have
something I want, therefor you should give it to me"
Works for food...doesn't it? Works for medical care ...doesn't it?
Just because someone can't pay for the best doctors, society should pay
for it...right?
And it's natural for people to carry that same attitude to Ham radio.
And if it's too hard..or you don't feel like the energy expenditure, you
can always say:
1. It isn't relevant
2. Just because you did it doesn't mean I should.
3. There are better ways.
4. The technology makes it irrelevant.
5. I want it!
6. It's too hard.
7. It's against my principles to conform to these rules.

and all the other tired cliches that the nocoders use. We've heard them
all. Now, you can continue as you are ...whining, or you can get off
your #$%^ and learn the code and operate on HF while you continue your
fight for no code.
Depends how you want to spend (or waste) your time.
But leave the entitlement attitude with foodstamps and medical care out
of Ham radio.

73,
Stan KF0NC

Does anyone have any info on where/how to adjust the frequency on the UHF side of the TH-79A dual band handheld? Mine (recently purchased) is off frequency on transmit only by about 3kcs. I do not currently have a schematic available but I'm fairly familiar with the internals of the radio already.

Please mail response to rjhall@mtu.edu

Thanks in advance!!!

Thanks,
Rob Hall

Burp is a lonley,frustrated old man.If Amateur radio died,he would
too!It is obviously his life!!His daily routine revolves around it!
He,most likely,was severely humiliated in some way by a HAM/HAMs and
this is his way(in his sick,pathetic mind)of 'getting even'.
I have watched him make a fool of himself since the old BBS days.He
will continue to do so as long as his feeble old fingers will type.
One thing I never really understood is,if Amateur radio is so bad,why
did his daughter get her ticket?He used to brag about that,but that put
her in the same group of people he so despises!!Strange!
Ko4qC
Yes,I know I 'said' Burp.Almost the same thing as a FART!!

CW is the best thing we have to keep the bands free of those who arent serious enough about the hobby to apply themselves.I would be in favor of dropping the CW requirements but ONLY if replaced by a much more technical set of theory/operating exams.
Any time I have second thoughts about this I tune to 11 mtrs and to a lesser extent,2 mtr.Not much difference,at least in this area.

We have a WINNER in the Log-It v5.0 Logging Software Contest !

Its : Drayton - KF4AME from Miami, Fl. Why not enter your name

for the MAY giveaway !?

My website has a free download of Amateur logging

software - and alot of other computer related programs too ! The

database is in full color, has logging, QSL functions, access

QRZ! cd-rom, search DX prefixes, ten minute timer, colorful

world maps with call prefixes for reference, awards tracking,

screen savers, English/Metric conversions and much more !

You can find it at http://www.esdi.com/log-it

There is also a bulletin board for Amateur Radio related stuff.

You can use it for messsages, sell/trade/buy, computer problems,

track DX and all kinds of things !

The site has a chat service for maintaining contact when the bands are

down and other times too !

Take a look ! Thanks .... Jim

We have a WINNER in the Log-It v5.0 Logging Software Contest !

Its : Drayton - KF4AME Miami, Fla.

You can enter the MAY giveaway ... why not submit your entry ?

Looking for a logging software package that is inexpensive and

does most of what the very costly packages do ? I have one !

Visit : http://www.esdi.com/log-it

I think this just might be what you were looking for - an old

fashioned deal ... good product and low cost ! There's a free

download there also !

The site also has a bulletin board service where you can post

messages, buy/trade/sell equipment, get help with computer

problems, announce DX operations and simply keep up with friends

and other things.

The site even has a chat service ... CHAT SHACK ! You can

maintain contact when the bands are down or anytime.

Take a look ! Thanks .... Jim

Take a look at the May 1997 issue of QST. (I just got mine in the mail).
There's an article about making a 40m 300W or 500W amp using Class E.
The references for it include the original paper in an IEEE transaction.

Thought I'd bring this up.

Phoenix, Arizona, the Center for Amateur Radio Learning (C.A.R.L.)'ham shack' is now open in the new Arizona Science Center. The stations call sign is W7ASC and we will be on the air weekdays from 9:00am to 5:00pm and weekends 10:00am to 5:00pm. We are currently operating the HF bands and making local VHF/UHF contacts. Our goal is to expose the thousands of Arizona Science Center visitors to Amateur Radio by allowing them to get on the air with the guidance of our volunteer control operators. We would also like to thank all of those who are working to make this long-term project a success.

For more information please visit the C.A.R.L. website at http://www.w7asc.org

or call Rick, AB7FH at 602-561-8405

: : morse code. Knowing that they use Hiragana, Katakana and Kanji
: : characetrs.

: Other than the way that they are printed ... the Hiragana and Katakana
: phonetic alphabets are exactly the same (as far as the phonetic sounds
: are concerned). There is no distinction made when copying Japanese
: Morse code.

This is true. However, when I tried to learn the Japanese code (wabun-
morse), I was instructed (by a self-learning kit, though) to copy the
figures down on papers in katakana. I still don't know the reason why.

: : Are their words all translated first in romanji and then sent as morse
: : code ?

It was the Japanese code which must be used by professionals to transmit
Japanese phrases in morse code. Besides, when I was a ham operator in
early 80s, I did not hear any use of romaji for Japanese phrases. If
the operator only knows the International code, he/she tends to use it
for making English phrases which are well stylized among ham operators.
This was the case even if the operator's counterpart is a Japanese. Not
so many ham operators chatted in morse in Japan, and the Japanese code
was mainly used by those operators who love chatting in morse.

: 3) Less than 2% of ALL JA operator licensees hold the First Class
: license which, at least until not too long ago required BOTH
: International and Japanese Morse CW. However, I *think* that
: the Japanese Morse CW requirement *might*) not be required
: anymore.

I think this is true.

I have found a repeater freq that has good range, no pl tone, but no one ever talks on this freq.

Is it appropriate for me to tx on this freq without permission, it is in the 2m range. I have had conversations on this freq with people that I have told them to meet me on that freq.

During peak tx times (drive in and drive home) there is nothing except sometimes a little skip.

Any suggestions?

Why so much complication? It's really actually quite simple. First,
consider what
would be needed if there were only a single, AM transmitter in the world.
You string
up a long wire for an antenna, and this wire, since it intercepts the
electromagnetic
waves from the transmitter, picks up a sample of the transmitted signal.
What has
happened is that some small portion of the transmitted energy is coupled
into your
antenna. Now, all you really need is a diode to "cut" the signal into one
or the other,
positive or negative half (I sure wish I could sketch this for you), a
small capacitor to
smooth out the high frequency "carrier," and a sensitive earphone and you
will be able
to hear whatever is transmitted. It is that simple, since that is the
inherent characteristic
of an AM signal. Now, for the inductor/capacitor combo. Obviously, there
are many
transmitters on many different frequencies. How do you select which one to
hear?
That's what the L/C combo is for. A parallel L/C "tank" circuit exhibits a
HIGH
impedance at resonance... letting the selected signal pass, and is a LOW
impedance
at other frequencies, shunting them out. That is it.

> fashion, how do we do that?

The problem is that there are very, VERY few Group C licenses available. A brief recap, Group A is Extra, Group B is Advanced, Group C is Tech / General, and Group D is Novice.

In "7-Land", you do not have any Tech or General license numbers available. I have the latest (May 1997) QST here, and as of March 3, the highest licenses for Group D was KC7UWP, none for Group C, KK7FU for Group B, and AB7UH for Group A.

The only two Districts that are still issuing Group C licenses are 1 and 3, and I have no idea where these two Districts are located. I think 3 is near New Jersey. :-)

Just as an aside, here in "0-Land", we are still out of Tech/Gen calls, and the Novice calls have rolled over from the KB0xxx to KC0xxx. Took less than 2 years to go from KB0STN (me) to KC0AIR (a new ham in the same town).

The fun part will be if you, or your wife, decides to upgrade to Advanced, and chooses to get a new callsign. :-) Me, I'm still just a Tech, I'm doin' my code practice, I'll shoot for T+ here in a month, and hopefully get to General by the end of the year. But I doubt if I'll ever give up my call, it's serendipity for me, since I really am a "Star Trek Nut"!! :-)

Would that be King Fool Zero Non Comprehending.

I suppose it would greatly suprise you to find that Bill, Gary Coffman, myself and many others who oppose CW testing as it now exists are, in fact coded, hams who ARE able to use the HF bands just any old time they please. What is it about the pro code test crowd that assumes that if someone disagrees with the current system that they want something for nothing. Get a clue there are a number of people who just think the system needs some change and have nothing personally to gain.

Jerry

I am ignorant about uk repeaters. From my limited knowlege I believe
that where subaudible tone access is available it's in addition to
the audible tone burst. Also you should be reassured that the tone
is only needed when the repeater is down. So long as a regular
exchange is taking place, the repeater is kept alive solely by
carrier detection.

I've cross-posted this to uk.radio.amatuer so that folks with actual
current knowlege can follow after me. Have a happy visit, Rick.

Burt,

You must not ever listen, always have your mouth running. You can't
learn anything in that mode.
Didn't you see any of the news reports on the Oklahoma bombing. Even the
news media new that the first emergency communications was handled by
Ham Radio operators.

It's just that all of the Tech/General (group C) call signs in the 7th
area have been assigned, so new Tech/General licensees get calls from
group D (Novice type).

> need to worry about this? If we need to upgrade these callsigns in some
> fashion, how do we do that?

Other than getting Advanced class tickets, there's not much you can do
at present. Eventually, when gate 4 of the vanity call system opens
(although who knows when that will happen--gate 3 isn't even open yet),
Tech/General licensees will be able to request available group C or D
call signs. See http://www.arrl.org/fcc/vanity.html for details.

Some repeaters have CTCSS, especially the big ones on 2m. In this case,
you can forget all about the 1750Hz toneburst requirement, and just use
CTCSS normally. They will all open with 1750Hz, however - this is a
licence requirement.

If you find a toneburst only repeater, just key up, and whistle. If you
can't get the correct frequency, sweep the frequency of your whistle.
Some repeaters take a few seconds of speech to open as well.

The basic idea goes:

<whistle> G0WZA listening through GB3HN (that's the usual call through a
repeater).

The repeater will usually respond with a roger beep, K, or similar. Some
do close quite quickly, though. Repeaters identify themselves in morse
every 15 minutes or so. If the repeater has CTCSS, then the ident will
be something like GB3PI C (the final letter indicates the CTCSS
frequency, in this case C = 77.0Hz). The idents are sent without CTCSS,
so if you've got CTCSS decode on, you'll never hear them.

Anthony is correct that once a repeater is open, it will stay open
through carrier detection alone. The overwhelming recommendation is,
however, if you and the repeater are CTCSS capable, then use CTCSS - it
helps in marginal areas.

There is a web site that carries the frequencies, locations and CTCSS
tones (some CTCSS tones may be shown where they're allocated, but not in

use, however) of all UK repeaters, run by the RSGB Repeater Management Committee. I can't remember the URL, but you should be able to find it through http://www.rsgb.org

This is the version of Morse Code used for Japanese kana syllables,
with International Morse equivalents also shown:

E . CD he
T - D1 mu

I .. DE double stroke following kana (nigori)
A .- B2 i
N -. C0 ta
M -- D6 yo

S ... D7 ra
U ..- B3 u
R .-. C5 na
W .-- D4 ya
D -.. CE ho
K -.- DC wa
G --. D8 ri
O --- DA re

H .... C7 nu
V ...- B8 ku
F ..-. C1 ti
(1) ..-- C9 no
L .-.. B6 ka
(2) .-.- DB ro
P .--. C2 tu
J .--- A6 wo
B -... CA ha
X -..- CF ma
C -.-. C6 ni
Y -.-- B9 ke
Z --.. CC hu
Q --.- C8 ne
(3) ---. BF sho
(4) ---- BA ko

5 5
4 ....- 4
(5) ...-.
3 ...-- 3
(6) ..-.. C4 to
Inter ..-.- D0 mi
..--. DF small circle following kana (han-nigori)
2 ..--- 2

```
Wait .-... B5 o
(9) .-..- yi
+ .-.-. DD n
.-.-- C3 te
.--.. ye
(a) .--.- B0 -
(b) .---. BE se
1 .---- 1
6 -.... 6
= -...- D2 me
/ -..-. D3 mo
-..-- D5 yu
(c) -.-.. B7 ki
Start -.-.- BB sa
( -.--. D9 ru
-.--- B4 e
7 --... 7
(e) --..- CB hi
--.-. BC shi
(f) --.-- B1 a
8 ---.. 8
---.- BD su
9 ----. 9
0 ----- 0
```

Notes represent accented letters in European languages or Turkish:

(1) u umlaut (2) a umlaut, cedilla (3) o umlaut or other accent
(4) ch, s cedilla (5) s hat (6) e primary accent (usually acute,
grave in Italian)
(9) e accent grave (a) a accent (b) j hat (c) c cedilla or accent
(e) z accent grave (f) n tilde

To remove ambiguities, the Japanese syllables are preceded by the hex code, in the version of 8-bit ASCII that includes kana, of the kana symbol represented. The symbols whose phonetic values I give as yi and ye have the appearance, respectively:

```
* ********
******* *
* * *
* * * *
* * *
******* *
* *******
```

wa2ise@netcom.com (Robert Casey) wrote:

>Have heard about something called "incentive licensing", and it was
>started in the early 1960's? Also have heard it soundly condemmed
>as ruining ham radio.

Incentive licensing was pushed as a way to upgrade the technical side of amateur radio. ARRL originally asked for a tougher written exam license between the extra and General (there was no Advanced in 1963) to use phone .The FCC was calling in many conditionals and finding over 50% could not pass the General. So they were somewhat in favor. The problem was that several other proposals were thrown in and the result is the old timer (probably Class A but now a General) lost operating frequencies on both CW and phone. CW Dxing (lower 25Khz) became for Extra class only ops and many nets on 75 were forced to crowd into the upper 100Khz as the ops (without upgrade) could no longer operate on the old frequency.

The old timers and their newly licensed friends became angry at ARRL and the FCC and even tho many kept their calls and many upgraded to get back their frequencies have stayed angry ever since. The end result is since these were primarily the bulk of the "elmers" the growth rate of amateur radio in the USA dropped to nothing and it took several years to get programs in place to reverse this trend. The program actually was described by one old timer as a "slap" in the face as these old timers were primarily builders not operators. Those who were operators simply went back and took/passed the exams and went on! This also meant the death knell for many amateur radio manufacturers like Elmac, Hammarlund, Hallicrafters, and National. Many old line dealers dropped ham gear or closed completely.

Hopefully amateur radio will never again be moved in such a misguided direction.
